ARTIC Colours Series

The ARTIC colours series comprises of seventeen basic colours compiled to suit the desires of designers and architects.

The ARTIC colours are specially formulated using speciality pigments combined with UV absorbers to enhance not on the polymer but also to strengthen the colour capability for increased strength to guard against fading when out in the field.

The range of colours were developed and chosen for their brightness, depth of colour and intensity to be pleasing to the human eye. The series comes in both single and double sided matte finish.

FROSTED Series

The FROSTED series are specially developed to suit the cosmetic industry for higher-end furniture market, giving designers and architects the opportunity to match and mix match cabinetry, counter tops, display units and such. This allows for specific colour customisation with their products and designs are align with their worldwide identity.

This series provides exclusivity like no other PMMA sheets. FROSTED provides a "Through and Through" single colour irrespective of its thickness. It resembles the subtleness of coloured snow, exuding the softness of something that needs to be touched lightly. FROSTED offers the creator and the visitor to envision the qualities in the end product it represents.

Its soft, milky interior blends evenly and throughout, mingling with its surface finish which could be either single or double sided matte finish.

The subtle pastel colours of FROSTED series were developed for indoor requirements and are not recommended for long-term outdoor applications. They are available in eighteen colours.

BUILDING APPLICATIONS

- Glazing
- Exterior wall lining
- Interior decorative partitions
- Interior wall panels
- Shower screens
- Shower bath cabinets
- Baths
- Vanity units
- Stair and elevator panels
- Signages
