Symphony Environmental Ltd- Test Report ETI (2141)

With regard to the degradation testing of the coffee pod outlined in the above test report, Symphony Environmental Ltd. confirms the following:

In keeping with the formulation of an oxo-degradable product, the component will begin to degrade on disposal at the end of its useful life (24months).

The degradation process will begin immediately on disposal in an oxygenated environment but the rate of degradation will depend on the environmental conditions-temperature and light- that the product will be subjected to. The action of these stimuli in the presence of oxygen will ultimately result in chemical and physical changes being observed in the product in line with those observed in the above test report.
