# SNAKE REPEL HAS EVERYBODY TALKING

## TESTIMONIALS

"I am very pleased with the product and have had Snake Repel sprayed in my yard for about 5 months and have no problem with snakes in my garden, as was previously the case."

**RJE Ras**

"My residence is on the border of Kloof Gorge, where it is thick with dense bush. As to be expected, I had a serious snake problem and contacted Snake Repel to sort it out. For the last nine months, they have been spraying my property and I have not had a single sighting of a snake on the property. The product definitely works and I would recommend it to anyone with snake problems."

**MR. D Trollope**

We at Grovida hereby give testimonial to chemical solutions for there excellent products Snake Repel and Go Gecko we supply most of the nurseries on the Kwa-Zulu Natal coastline Including Build It stores, Mica's, Builders express and Builders Trade Depots. We have had excellent come backs from these stores and the orders keep going out. Our store at 400 Sydney road Durban have also had the same excellent comments from the general public

Snake repel and Go Gecko are excellent product not only for keeping to what they say on the label, but it is also environmentally friendly ,non toxic and non harmful

**D.K Subramanien**

"Efekto is a national distributor of Snake Repel and Go Gecko to the retail trade, i.e. chain stores, hardware stores, cooperatives and garden centres.

Snake Repel is doing extremely well in the Limpopo province and coastal regions and we have received positive feedback from consumers who have bought the product.

For enquiries regarding the products please contact Efekto or visit our website for further details."

## WHAT THE EXPERTS SAY

Snake Repel is most effective when applied to areas around a house or even along fence lines. Snakes moving towards this line of Snake Repel will instinctively turn around and change direction away from your home. Reptiles Unlimited attends to hundreds of snake call outs each year and I have no hesitation in recommending Snake Repel to the home owners, most of whom never have reason to call me again.

I highly recommend the use of Snake Repel by home owners, campers, field researchers and just about anyone who is likely to come into contact with snakes in the natural environment.

**J.P Wittstock**

**Herpetologist**

Like many other snake catchers, I was also skeptical about the snake repel product when I first heard about it. Nonetheless, I got myself a bottle and decided to put it through a little test. I sprayed a line of the product about a meter away from the bottom of my staircase. Coincidentally, about 15 minutes before doing this test I was called to my neighbours house to remove a snake from one of the cupboards, and I found it fitting to use the same snake in my test.

Without touching the snake I turned the container it was in on its side, and the snake crawled out and started moving down the stairs. I stood still at the top of the staircase and watched. When it got over the last step and got close to the product it turned around completely and moved away from it. I kept watching the snake and every time it got close to the sprayed area it turned and moved away.

I then went down the stairs and tapped the snake on its tail to get a reaction and the snake then went right over the sprayed area.

I also tried this test with other snakes and they also moved away from the sprayed area, but when I moved toward the snakes or touched them, they went right over it.

This proved to me that this product does work and with the snakes natural movement where the animal is not threatened or being chased.

**Rishaad Ally**

## HOW IT WORKS

Snake Repel is the world's first passive non-toxic snake repellent designed to preserve fauna and flora, with a non aggressive formula which has no harmful effects on nature.

Snakes have an extremely sensitive sensory system, which allows them to identify all forms of threat long before they are completely exposed to it. A built in survival switch activates when a snake is confronted with anything unnatural, like humans or a hungry cat chasing them. This switch which is driven by fear causes them to focus on escape from a prospective attacker and in most cases saves their lives as it switches off all other senses such as hunger, reproduction or scent and allows them to focus on survival. While in their natural movement, without threat of any sort, this 'switch' remains in the 'off' position, which allows the snake the ability to recognise hunger, female pheromones and the sensory ability in identifying air particles which are collected by the tongue and moved past the Jacobson's organ in the frontal lobe of its head. While in this natural movement, with no threat, the snake has the ability to identify the product Snake Repel, which has been sprayed as a border line, and will move away as the repulsion properties of the product are recognised by the Snakes Jacobson's Organ.

Snake Repel is silicone based, which allows the products active ingredients to be released slowly into the air, from the sprayed line. Any snake moving toward this product in its natural movement, will immediately identify the product and turn away.

Snake Repel has no harmful effect on the snake and acts purely as a temporary barrier; it needs to re-applied to the required area every 3 to 4 weeks during summer and winter, to ensure that the protective barrier is maintained.
