# Professional Hand Held Indicator

**STAR** is a professional ergonomic indicator extremely versatile and easy to be used for measurement of FORCE, WEIGHT, PRESSURE (gas), VACUUM, TORQUE and DISPLACEMENT.

It is possible to integrate inside a force sensor (up to max. 5kN) or a pressure sensor (relative, absolute or differential up to max. 5bar) while from the external input it is possible to connect strain gauges sensors with output in mV/V such as: load cells, force transducers, pressure transducers, torque and displacement transducers.

Internally the microcontroller process the signals coming from the sensors through a 24 bit ( $\pm 50.000$  divisions at 2mV/V) analogue digital converter at a conversion frequency varying from 5Hz at 4800Hz by making it suitable for every application that may require both high resolution and high sampling frequencies.

The display of measurements happens through a big graphic backlighted display.

**Star** is equipped with **USB** interface that allows both the communication in real-time with a PC and the recharge of the internal long-lasting and great reliability battery (Li-Ion).

In addition to the direct reading of the measurements, it is possible to detect PEAKS, block the measurement on the display thanks to the HOLD function and through the internal DATA LOGGER it is possible to record up to

130.000 measurement at programmed intervals or manually through the REC button.

On request, as an OPTION it is possible to integrate a WIRELESS interface that allows to communicate with PC, TABLET or PLC in real time.

#### **Typical Applications:**

Calibration of materials test machines, test benches, pressure tester, pressure switch etc. Quality controls in the production lines, calibration and test laboratories.

Compression and tension tests on springs.

Tests of frictions, cable terminal tearing, rivets etc.

Test of lockup on both packing and protection devices.

Test on welding of electronic components.

Test of opening and closing of both manual and automatic doors.

Test of the handling of both manual and automatic loads.

Test on filters, loss and vacuum tests, analysis of pressures variation in the time.

Wireless monitoring of hanging loads, mobile weighing.

Environmental pressure monitorino. (Barometer)

Calibration of: release and direct reading torque keys, screw drivers.

Monitoring of cracks through displacement transducers in the building industry.

#### Available combinations:

With internal sensor to measure **FORCE** and **WEIGHT** in compression and tension in ranges from 10N (1kg) up to 5kN (500kg)

With external sensors <sup>(1)</sup> such as load cells or force transducers with standardized ranges up to 500 t (5000kN)

With internal sensor to measure: the **VACUUM**, a relative, absolute or differential **PRESSURE** in gas (NO liquids), with ranges from 100mbar up to 5bar (1.5 a 70psi).

With external sensors <sup>(1)</sup> such as TP16 or TP1 models to measure higher pressures with standardized ranges up to 2000bar (29000psi) suitable for both gas and liquids.

With **external**<sup>(1)</sup> sensors such as TRX, TRS, RT2, uTOR models to measure static or dynamic **TORQUES** with standardized ranges from 1 up to 5000 Nm.

Possibility of recording continuous **PEAKS** in clockwise and anticlockwise direction at high speed, 4.8kHz.

Possibility of recording **1° PEAK** with programmable threshold to test torque keys.

With **external**<sup>(1)</sup> sensors such us LDT model to measure the **DISPLACEMENT** with standardized ranges from 5 up to 100 mm.

**STAR** can be manufactured on **REQUEST** equipped with the WIRELESS transmission, which allows to transmit the data directly to a PC and to TABLET or a PLC.

By using WinWIMOD software it is possible to create a **NETWORK** with a max. number of 32 units, the net can consist of both STAR instruments and sensors interfaced with WIMOD.

(1) STAR automatically recognizes a max. number of 7 transducers alternatively connected, by **Auto Configuring** itself with the dedicated parameters (Measurement unit, Filter, Resolution). It is possible to connect different sensors to perform measurements of FORCE, WEIGHT, PRESSURE, TORQUE and DISPLACEMENT.

#### Main characteristics:

PRESSURE internal sensor ACCURACY: 0.10% F.S. (ON REQUEST 0.05% F.S.)

FORCE internal sensor ACCURACY: 0.05% F.S. External channel ACCURACY: 0.01% F.S.

REFERENCE temperature 23°C, Service temperature from 0 to +50°C Temperature effect (10°C): on zero  $\leq \pm 0.01\%$ , on full scale  $\leq \pm 0.01\%$ 

**External INPUT** signal 2mV/V (350 or  $700\Omega$  4 wires system) 5Vdc power supply Standard resolution  $\pm 50.000$  divisions at 2mV/V

HIGH RESOLUTION (128x64 dots) LCD graph **DISPLAY** with 3 levels of backlighting to adapt itself to any conditions of external brightness and with the possibility of rotating the visualization of 180°.

**AUTOMATIC recognition** of FORCE, WEIGHT, VACUUM, PRESSURE, TORQUE and DISPLACEMENT external transducers (max. 7)

#### Programmable MEASUREMENT UNIT:

FORCE and WEIGHT: kg - g - t - N - daN - kN - MN - lb - klb

PRESSURE: bar-mbar-psi-MPa-kPa-Pa-mH2O-inH2O-kg/cm2-mmHg-cmHg-inHg-atm

TORQUE: Nm - Nmm - kgm - kNm - in.lbf - ft.lbf - gcm - kgmm

LENGTH: mm - inch

**DIGITAL CALIBRATIONS** protected by Password with full scale programming or with the "**LINEARIZATION** by points" of transducers, for every transducer it is possible to separately calibrate both the positive and the negative field. (Example: Tension and Compression)

**DATALOGGER** allows to memorize measurements and to keep them in the internal memory even in case of instrument switching off. (max. 130.000 recordings)

Recording can be performed either in **AUTOMATIC mode** by programming an interval of time (from 1 sec up to 24 hours) or in **MANUAL** mode through the REC button.

The data can be then showed on the display or downloaded through the powerful software Quick Analyzer for creating graphs, exports in Excel, printing of reports etc.

#### Programmable RESOLUTION.

Digital FILTER and CONVERSIONS per SECOND (from 5 to 4800) programmable

**ZERO** function that allows to instantly set to zero the measurement.

**HOLD** function that allows to temporarily "freeze" the measurement to be able to analyze it.

**PEAK** function (positive e negative).

Li-lon internal battery which ensures a 24 hours **AUTONOMY** when backlighting is activated. In DATALOGGER mode by setting a recording every 5 min. it is possible to perform recordings for approx. 100 hours without recharging the instrument.

**AUTO POWER OFF** programmable function from 1 up to 99 minutes

**CLOCK** function (hours, minutes) and internal **CALENDAR** (day, month).

Serial communication through **USB** port, **WIRELESS** data Transmission (ON REQUEST).

Protection grade (EN 60529) IP40, case made of painted ALUMINUM, WEIGHT ~ 0.7kg
