What is SPC Vinyl Flooring?

- SPC Vinyl Flooring stands for stone plastic composite vinyl flooring.
- SPC vinyl is an engineered luxury vinyl that combines limestone and stabilizers to create an extremely durable core.
- An SPC vinyl floor is still 100% waterproof, but adds stability, dent resistance and structure to vinyl plank flooring.

— FEATURES —

Waterproof

Termite Proof

Wear & Tear Resistant

Easy Maintain & Clean

UV Layer

- Perform Water Proof
- Stain Resistant
- Easy to Care For

Wear Layer

- Protect the Authentic Color
- Embossing from Abrasion

Decorative Layer

- Decorative Pattern
- Color Layer

SPC Core

- Prevent Expansion & Contraction
- Cover Sub-floor Imperfection

SPC Vinyl has Several Main Layers.

➤ Wear Layer

The wear layer is the top coating on the vinyl floor that is transparent. This adds scratch and stain resistance to the vinyl plank.

➤ Vinyl Top Coat

Each SPC vinyl floor will have a thin layer of vinyl attached to it. This layer is waterproof and will contain the pattern, texture and look of the floor.

➤ SPC Core

The SPC core is made by combining limestone powder and stabilizers to create a dimensionally stable and waterproof core.

➤ Attached Underlayment

SPC vinyl floors may or may not come with attached underlayment. These are usually included to help with sound reduction and add softness to the floor.

Benefits of SPC Vinyl Flooring

➤ Waterproof

It is 100% waterproof, which means it can be installed in kitchens, bathrooms, laundry rooms and restaurants without worry!

➤ Stability in Temperature Fluctuations

With the stone construction, an SPC vinyl core is more stable in environments with temperature changes, such as cabins, homes with AC units and homes with humidity fluctuations.

➤ SPC Core

The SPC core is made by combining limestone powder and stabilizers to create a dimensionally stable and waterproof core.
