- Raw Material Selection**  
Size: huge and large in size, long roots  
Shape: human-like root shape  
Color: dark, black soil in wrinkles  
Texture: wrinkles and layer by layer
- Active Ingredient Extraction**  
Through ultra-fine pulverization technology, ultrasonic airflow is done at low temperature to quickly and maximally retain the active ingredients of American Ginseng.
- Enhance Efficacy**  
Ultra-fine pulverization has a grading system, distribute the particle size accordingly, which helps to improve the adsorption and solubility of the components and makes the body easier to absorb.
- Prevent Wastage**  
After the ultrafine pulverization of the active ingredient of American Ginseng, the ultra-fine powder of near-nano-fine particle size can be directly used in the production, which helps to improve the utilization rate and reduce the waste of raw materials.
- Reduce Pollution**  
The extraction and production process of American Ginseng is done in a closed system to prevent micro-powder from polluting the surrounding environment and to prevent dust from contaminating the product.
