

HITACHI
Inspire the Next

UPGRADE FOR LIFE

With the latest advanced technology and the trust that comes with a 100-year reputation for reliability, Hitachi home appliances are the ultimate choice for every room, in every home.

Featuring smart human-friendly designs, advanced eco-conscious technologies and quality materials, Hitachi home appliances accentuate your everyday life. Upgrade for Life.

Air Conditioner

HITACHI
Inspire the Next

UPGRADE FOR LIFE

Vector DC Inverter x Scene Camera Ceiling

Welcome Breeze

Extra cool wind target blown to you when coming home.

Air Sleep Ceiling

Ideal air flow, temperature control and silence for good sleep.

SCENE CAMERA CEILING

SCENE CAMERA CEILING

Smart analysis and auto-operation for fast, efficient and comfortable cooling.

SCENE CAMERA CEILING

Finds heat spots in your room

Scene Camera Ceiling monitors both human and room conditions to auto-select the best cooling solution to reach an even room temperature faster.

Ceiling Heat
from Sun:
40°C

Wall Temp:
28°C

Thermal Camera

Heat Distribution Monitoring

Heated roof and ceiling are two of the key causes of slow and inefficient cooling. Thermal Camera monitors room heat distribution to smartly reduce heat at the source.

Actual Thermal Distribution in South East Asia.

Image Camera

Human Activity & Location Monitoring

Detects human activity level and location of each person to smartly control set temperature and air flow direction depending on the scene.

Sunlight
heat:
38°C

Around 30°C

Around 27°C

Around 2m

Around 6m

Activity Level: Low
Location: Close

Activity Level: High
Location: Far

Condition: Asleep

Air Sleep Ceiling

Scene Camera Ceiling smartly works to have ideal air flow control, temperature and silence best for sleep.

Ideal Temperature Control

Once the air conditioner recognizes that you have fallen asleep, it automatically adjusts the room temperature to best assure a good sleep, as well as switching to the 19dB* Silent Mode.

*Minimum operating noise of 1.0HP and 1.5HP Air Sleep, Air Sleep Ceiling Inverter models.

Ideal Air Flow Control

1. Ceiling Flow

The ceiling on the top floor is likely to be a highly heated part of your room. When the heat source is detected, the ceiling is targeted for cooling. At the same time, a tornado flow is generated that blows chilled air along the ceiling and walls to softly wrap you with chilly air for fast, even cooling.

Actual bedroom thermal distribution in Thailand

Chilly air widely spread in the room along ceiling and walls.

2. Human Targeted Flow

Scene Camera continuously checks your activity level, such as rollovers, and the temperature of the area where you sleep. By doing so, it can smartly adjust air direction to suite each person's sleeping condition.

Controls room temperature with the Air Sleep Mode for a good sleep.

When a person is uncomfortably rolling over and the temperature is high, cool air is automatically delivered for a certain time to provide comfortable cooling.

19dB Silent Operation

19dB silence is realized by Wave Blade Indoor Fan technology. Wave-shaped fan blades vary the timing of each blade cutting through the air to reduce annoying wind noise.

*Minimum operating noise of 1.0HP and 1.5HP Air Sleep, Air Sleep Ceiling Inverter models.

Air Sleep Sensor

Air Sleep Sensor works together with Scene Camera Ceiling to check human movement and sleep/wake conditions.

Air Sleep Sensor

Tornado Louvre Control

Hitachi Original

Hitachi's Air conditioner controls the louvre position to create a tornado of air flow that uplifts the air flow to reach the ceiling. This air flow then runs along the ceiling and walls to widely circulate in the room.

*Tested by Hitachi Test Lab. RAS-VX10CG/ VX13CG

29°C 16°C

Air is sent upward and cools the ceiling, as well as the room temperature. *Tested in Hitachi Testing Room.

WelcomeBreeze

Extra cool wind welcomes you when coming home on a hot day.
After you have cooled down, it will auto shift to Heat Source Cooling operation depending on the room heat distribution.

At Start up

Welcome Target Flow

Image Camera detects human location and targets it with extra cold, max. fan speed air flow for the first 15 min.

Detects Human Location

Air Flow Target Blown to People

Instant Chill with Extra Cold Air

Powerful Start Up with Max. Fan Speed

One Touch ON

After 15 min

Heat Source Cooling

After 15 min, Scene Camera Ceiling detects room heat distribution and smartly controls the air flow to preferentially cool the heat source for faster and even cooling.

Top floor room with heated ceiling

Cooling focused on hot ceiling by up and down swing with longer air blow targeting ceiling to cool it down.

Sunny day with curtains open

Cooling focused on hot window by left and right swing with longer air blow targeting window to cool it down.

When room is evenly cooled

Surrounding flow to avoid over cooling.

Eco Mode

Scene Camera Ceiling detects energy wasting and smartly cools with minimum energy for just the right level of comfort in various scenes.

Activity Level, Location and Sunny Areas

Scene Camera Ceiling detects the location, activity level of individuals and sunny areas to make adjustments to provide the most comfortable, energy saving cooling possible.

Softly cools people with low activity and away from sunlight.

Cool air is sent longer to the people in the sunny areas with higher activity level. Swings air for a shorter time for those with lower activity level.

Number of People in the Room

Scene Camera Ceiling detects the number of people in the room at all times, and adjusts the airflow and temperature to match slight temperature increases and decreases in room temperature due to human heat generation.

Comfortable cooling with a wide swing to cover everyone in the room.

Automatically switches to soft cooling after pre-estimating room temperature changes when the number of people present decreases. Airflow swing is also limited to the area where the people are.

Automatically switches to soft cooling after 10 min of absence to save energy.

When Auto Off is set, the air conditioner automatically switches off after 1 hour of absence.

When Auto On is set, the air conditioner automatically switches on when people are detected.

*If you leave the air conditioner operating when you are not at home, please cancel the Auto Off setting. Do not use the Auto Off setting in rooms occupied by people who cannot operate the air conditioner themselves such as infants, children, the elderly and individuals who are ill or physically impaired.

Refresh Mode

Refresh mode automatically controls temperature and compressor operation to increase chillness of the wind and reduce sensual humidity for upgraded refreshing feeling.

VECTOR DC INVERTER

Hitachi's Inverter newly applies the original Vector DC System. Going beyond energy saving, the Vector DC System achieves top class cooling capacity and reliable operation even under unstable power conditions.

Energy Saving

A combination of the Vector DC Inverter and Scene Camera Ceiling can cut energy consumption by up to 62%*¹ compared to non-inverter models! So you can stay comfortable all day, and save energy at the same time.

*¹ RAS-VX13CG (Eco Mode) compared with a Hitachi 1.5HP non-inverter model (Cooling Mode). Power consumption based on cumulative power consumption after 8 hours of operation. Room temperature at start: 35°C, Set temperature: 25°C, Fan Speed: Auto.

Testing condition:
Three people in the room. Level of activity at 2.5m from the indoor unit estimated to be 1.0 metabolic equivalents (reading, etc.). Three people in separate locations in the room during the daytime with the curtains closed to cut the amount of sunlight to a low level. Ambient temperature lower than the set temperature.

Inverter

With Vector DC Inverter technology, an air conditioner cools with maximum capacity at start-up, then automatically slows down and operates at minimum suitable capacity to maintain room temperature at a comfortable level.

Non-Inverter

Non-inverter models can only operate with simple on-off controls. Trying to maintain temperature by repeatedly switching power on and off consumes much more electricity and results in bigger temperature fluctuations.

Powerful Cooling

The Vector DC Inverter system, wide air inlet and indoor fan enable top class cooling capacity and big air volume for upgraded comfort.

Max. 14,330 BTU/h!*
Big Air Volume

*² RAS-VX10CG/ VX13CG compared to RAS-SX10CD/SX13CD/SD10CD/SD13CD
*³ Max. cooling capacity of RAS-VX13CG.

Low Standby Energy

Electricity is continuously consumed even when the air conditioner is switched off but Hitachi's new standby energy saving system can reduce power consumption by 82%*⁴ when not in use.

Simulation

0.9W Standby Energy

**82%*⁴
Reduced**

*⁴ RAS-VX13CG compared to RAS-SX10CD/ SX13CD/ SD10CD/ SD13CD.

Reliable Operation

Case 1

Instantaneous Power Failure: Non Stop Operation

If there's an instantaneous power failure (sudden voltage fluctuation), the Vector DC System detects the voltage fluctuation to prevent the air conditioner from stopping due to a current surge.

Case 2

Power Failure: Auto Restart at Previous Setting

If there's a power blackout, a microcomputer in the Vector DC System memorizes the setting at the time of the blackout, and automatically restarts operation at the same setting after power recovery.

What is the Vector DC Inverter System?

The Vector DC System features a special microcomputer pre-installed with compressor characteristics data. Thanks to this, the system not only monitors compressor behavior and current flow conditions, but also adjusts compressor rotation speed at all times. This enables smooth compressor operation without loss, resulting in stable operation and high cooling capacity.

STAINLESS CLEAN System

Antibacterial stainless steel and silver ions are applied inside to keep the air pathways extra hygienic for fresh, healthy, clean air.

Stainless Air Duct

Antibacterial*¹

Dust Cut

Stainless Louvre

Antibacterial*¹

Dust Cut

Easy to Clean

Silver Ion Fan

Antibacterial*¹

Nano Titanium Stainless Pre-Filter

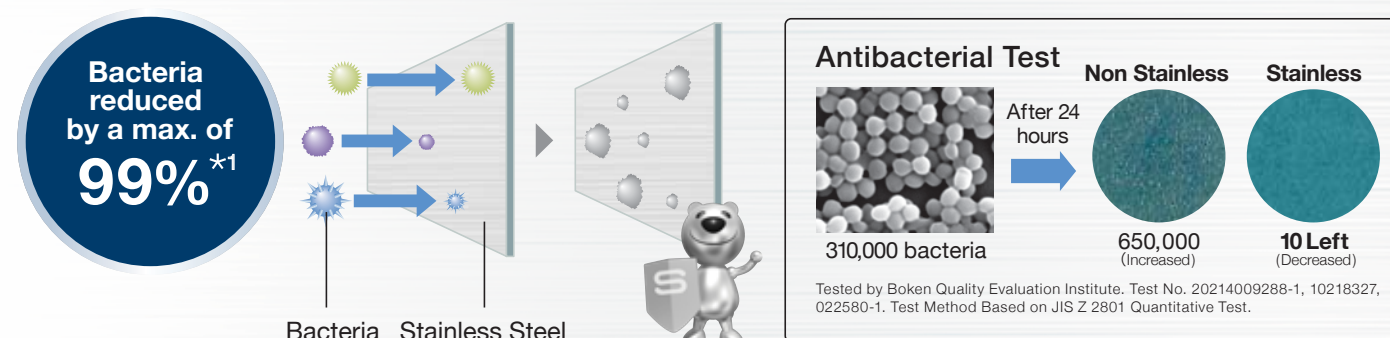

Antibacterial*¹

Easy to Clean

*¹ Tested by Boken Quality Evaluation Institute. Test No. 20214009288-1, 10218327, 022580-1. Test Method Based on JIS Z 2801 Quantitative Test.

Antibacterial Sanitizing

When bacteria come into contact with the stainless steel, the metal ions adhere to them and suppress their activity and growth. In this way, bacteria are thoroughly reduced by a maximum of 99%*¹.

Dust Cut

Thanks to its sleek surface and non-static properties, more than 50%*² less dust sticks to stainless steel than to plastic. Which means twice the cleanliness and half the cleaning time.

Easy to Clean

A single wipe without water is all that's required to remove dust from the filter. Even dust that contains grease can be easily removed from the sleek surface.

Did You Know?

Air conditioners can get very dirty on the inside, and can become home to bacteria and allergens. Hitachi's Stainless Clean applies antibacterial stainless steel inside for a long-lasting, fresher air supply.

Conventional Air Conditioner After 10 Years of Usage

High Quality Stainless Steel

Stainless steel is iron mixed with chromium to provide anti-corrosion properties. The higher the chromium content, the higher the resistance to corrosion. Anti-corrosion effect can be further enhanced by adding nickel to the content. Stainless Clean uses austenitic stainless steel that contains 18% chromium and 8% nickel. Thanks to its reliable quality, austenitic stainless steel is widely used for everything from high class cooking ware to chemical plants where high resistance to corrosion and durability are required.

* Applicable to Stainless louvre and air duct.

Nano Titanium Wasabi Air Purifying Filter

The filter is packed with a hybrid coating of Nano Titanium and wasabi solution which provides a powerful antibacterial, anti-mold, anti-allergen and deodorizing effect.

Effect	Test Agency	Test Method
99% Antibacterial	University Putra Malaysia	Testing Method: Based on JIS Z2801:2000 Bacteria Sample: Staphylococcus Aureus
95% Anti-Allergen	International Medical University Malaysia	Testing Method: 6 hours ELIZA Assay Allergen Sample: Dust Mite Allergen
82% Odor Removal	Nanopac Testing Lab	Testing Method: Gas detector tube method Odor Sample: Ammonia
98% Volatile Organic Compounds Suppression	Nanopac Testing Lab	Testing Method: Gas detector tube method VOC Sample: Formaldehyde
Mold Suppression	Nanopac Testing Lab	Testing Method: Comparison of 2 slices of fresh bread left in separate acrylic chambers, with and without the Nano Titanium Wasabi Solution for 2 weeks. No mold has grown on the bread with Nano Titanium Wasabi Solution, while bread without were covered with mold.

One-Touch Powerful Mode

A press of the button will instantly start powerful cooling operation, which makes the air flow reach much further to quickly cool the room with maximum cooling power.

One-Touch Silent Mode

A press of a button instantly starts the silent operation.

Direct Swing / Indirect Swing

You can choose whether to have cool air sent directly to you, or indirectly for soft cooling as desired.

Direct Swing

Scene Camera Ceiling detects your location, and always sends cool air directly to you to provide a comfortable breeze.

Indirect Swing

Scene Camera Ceiling detects your location, and automatically avoids sending cool air directly to you for soft cooling.

Anti-Corrosion, Anti-Rust

Green Fin Condenser

With its special anti-corrosion green coating, the Green Fin Condenser lasts up to 3 times as long as standard types.

Fireproof Electrical Enclosure

Hitachi uses 100% metal housing to enclose and tightly seal its electrical and electronic components. This ensures there is virtually no possibility of fire spreading.

UV Fresh

Even more fresher air supply is realized by combining UV Fresh! UV-LED light emits shortwave UV onto the filters and deactivates 99%* of bacteria trapped.

*Tested by Japan Food Research Laboratories. Approval No.203061804-001.

Nano Titanium WASABI Air Purifying Filter

Packed with a hybrid coating of Nano Titanium and WASABI solution, this filter realizes powerful antibacterial, anti-mold, anti-allergen, and deodorizing effect.

Nano Titanium Pre-Filter

Hitachi's unique "Nano Titanium Pre-Filter" features a coating of Nano Titanium that resolves adhering microbes and odors. Due to its sleek surface, even dust containing grease can be easily wiped off without using water.

Twin Turbo Fan

Hitachi's Twin Turbo Fan delivers air flow that conventional fans simply cannot match. The streamlined, drag-reducing design also helps to dampen noise efficiently.

Green Fin Condenser

With its special anti-corrosion "green" coating, the Green Fin Condenser lasts up to three times as long as standard types. This coating assures better performance, durability and savings, even in tough conditions such as those in coastal areas.

Left-Right Auto Swing

Vertical airflow from the left and right sides is delivered by the automatic horizontal movement of the air deflectors over a wide angle to cool the entire room uniformly.

High Efficiency

Thanks to the powerful rotary compressor, highly efficient heat exchanger and Twin Turbo fan, Hitachi Twin Flow models deliver unbeatable energy efficiency.

100-120 ft²	9,639-11,566	1.0HP	8,020-9,624	1.0HP
130-150 ft²	12,530-14,458	1.5HP	10,426-12,030	1.0HP
160-180ft²	15,422-17,350	2.0HP	12,832-16,040	1.5-2.0HP
190-280 ft²	18,314-26,988	2.5HP	15,238-22,456	2.0-2.5HP

*1 Calculated based on SHASE-S112-2000 standard. Condition: West side room with small window (1.8x0.9m), external heat insulation level low.
The necessary cooling capacity may differ depending on your room condition.
*2 Recommendation based on Hitachi Inverter Room Air Conditioner product line up.

Features Introduction

Scene Camera Ceiling

Consists of single Thermo Camera, Image Camera and human sensor that monitors heat distribution, human activity level and location to auto-adjust cooling operation.

Air Sleep Mode

Monitors your sleep conditions and auto-adjust to super silent operation and maintains the optimum room temperature for a good sleep. It returns to the normal cooling mode when the sensor detects your awakening.

Air Sleep Ceiling

On top of controlling silent operation and optimum room temperature by Air Sleep mode, it will auto select Ceiling Flow or Human Targeted Flow depending on the scenes.

Welcome Breeze

Target cools human with extra cold and powerful air flow for the first 15 min. Auto shift to Heat Source Cooling after 15 min.

Eco Mode

Scene Camera Ceiling smartly monitors human presence, location, activity level, sunlight and temperature to automatically adjust cooling operation for maximum comfort and minimum energy consumption.

Smart Swing

By detecting human presence, individual location, activity level, sunlight and temperature, Scene Camera Ceiling enables smart adjustment of wind direction (left/right, near/far), swing time depending on the scene.

Auto Off Mode

The air conditioner will automatically turn off after 1 hour of human absence detection.

Auto On Mode

The air conditioner will automatically turn on after detecting people in the room.

Direct/Indirect Swing

Direct Swing: Automatically sends cool air to the place where people are.
Indirect Swing: Automatically avoids sending cool air to the place where people are.

Save Mode

Limits maximum current during operation to prevent the circuit breaker from tripping.

Stainless Clean

Stainless steel is applied to air ducts, louvre and pre-filter to realize an antibacterial and dust prevention effect.

UV Fresh

Antibacterial UV LED light is emitted to sterilize bacteria on the air purifying filters.

Nano Titanium Stainless Pre-Filter

Pre-filter with Nano Titanium Stainless coating that sterilize bacteria, deodorizes and enables easy cleaning.

Nano Titanium Pre-Filter

Pre-filter with Nano Titanium coating, which uses a TiO2 catalyst to provide an antibacterial and deodorizing effect.

Anti-Mold Pre-Filter

Pre-filter with anti-mold effect.

Nano Titanium Wasabi Air Purifying Filter

Air purifying filters are coated with Nano Titanium and wasabi contents to provide an antibacterial, anti-allergen, anti-mold and deodorizing effect.

Washable Detachable Front Panel

Easy-to-detach washable flat front panel for easy cleaning and maintenance.

Refresh Mode

Controls temperature and compressor operation to maximize a chilly feeling and reduce sensual humidity for a refreshing feeling.

Powerful Mode

A single press of the Powerful Mode button starts powerful cooling operation with maximum cooling power and fan speed.

Silent Mode

A single press of the Silent Mode button starts quiet operation.

Fuzzy Logic Control

The built-in microcomputer measures and records room size together with previous and current conditions and sets the advanced activation timer to provide optimum temperature.

Sleep Mode

Off timer useful when you would like the air conditioner to switch off after a certain amount of time during sleep.

Sensor Dry Operation

Decreases room humidity by softly cooling the room.

Up-Down Auto Swing

Wind direction is automatically directed up and down to deliver cool air evenly.

Left-Right Auto Swing

Wind direction is automatically directed left to right to deliver cool air evenly.

Seamless Fan Speed Control

The four fan speed levels (Powerful, High, Medium, Low) switch extremely smoothly for seamless non-step fan speed control.

12h/24h Timer

Timer setting that automatically turns off operation after a selected number of hours.

Air Exhaust System

Allows ventilation of the room.

Vector DC Inverter

Uses a special microcomputer pre-installed with the compressor's mechanical properties data to monitor and adjust compressor rotation speed at all times for efficient, powerful, stable operation.

DC Power System

Uses DC indoor motors that are efficient, quiet and safe during maintenance.

Auto Restart

Restarts the air conditioner at the previous setting after a power failure.

Fireproof Electrical Enclosure

Electrical parts of indoor and outdoor units are tightly enclosed in a 100% metal box to ensure there is virtually no possibility of fire spreading.

Anti-Corrosion Green Fin

Anti-corrosion green coating on the outdoor unit heat exchanger.

Antirust Outdoor Unit

Constructed of galvanized sheet complete with baked synthetic resin type paint that can withstand rust and harsh weather conditions.

3-Minute Delay Circuit

Ensures there's no danger of the fuse blowing or damage to parts if operation is restarted accidentally.

Twin Rotary Compressor

Twin rotating cylinders assure better balanced rotation for less vibration and quieter operation.

Changeable Drain Hose

Drain hose connection is easily interchangeable to either the left or right of the indoor unit.

Drainless Splash System

Condensation from the evaporator is splashed back onto the condenser surface for better cooling efficiency without the need for a drain.

Twin Turbo Fan

Enables powerful airflow with low noise.
