- 1 - 4 Building Material Spacer
 - 5 Assembly Of Form Tie
 - 6 Assembly Of Tie Rod
 - 7 Form Tie Accessories / Clamp / PVC Waterstop
 - 8 Aluminium Formwork / Fastener / Safety Rebar Cap / Mesh
 - 9 PVC Chamfer / Corrugated Pipe / Top Cap & Flexible Hose / Others
- 

What is Spacer

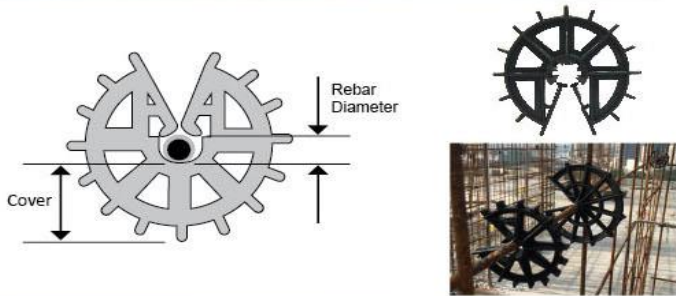

A spacer for every space. An article either in plastic or concrete that is placed in between the formwork and the reinforcement bars to keep them in position before and after casting. Spacers are internationally recognized and recommended. Spacers also help to prevent spilling concrete and provide concrete covers.

In the 60's spacers were first introduced to construction sites around the world. However, contractor cast their own concrete spacers (tofu) at site. With the advance of construction technology, many countries started to manufacture plastic spacers. In the 80's, plastic spacers were introduced and highly recommended.

Advantages of using Plastic Spacer

There are many advantages to plastic spacers as compared to the conventional practices :-

- 1) Resistance to Corrosion
 - 2) Safety in Handling and Environmental Friendly
 - 3) Cost Savings
 - Quality and Cost-effective.
 - Consistent in size, shape and aesthetics.
 - Light, handy and no wastages.
- Saves contract work duration.
 - Save labour costs.

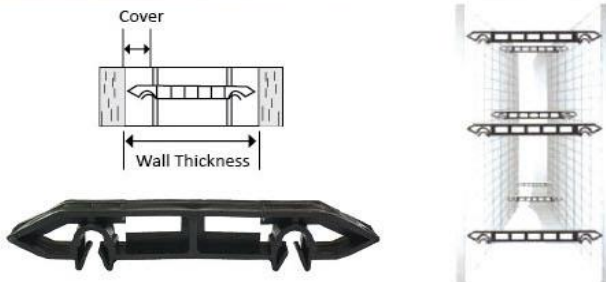

Plastic Wheel Spacer (PW)

Wheel Spacer is easily positioned on the reinforcing bar and has a special locking arrangement to minimise the risk of the spacer becoming dislodged when in position. It is rigid enough to withstand the normal pressure exerted on it whilst the formwork is being placed, but is sufficiently flexible to be readily fixed on reinforcing steel of different bar sizes.

Applications

Wheel Spacer are suitable for spacing horizontal and vertical reinforcement in precast, small bore piling systems and most insitu concrete construction applications.

How to order : Please specify cover and rebar diameter

Plastic Wall Spacers (WS)

Wall spacers are made of durable plastic with specially designed clips for a firm grip at bar from 6-10mm, with integrally fixed plastic clamping spacers which give concrete cover of 25mm or 30mm.

Applications

Wall spacers functions are reinforcing mat connector and distance spacers for the vertical formwork. No previous u-hooks to bend, no tying, no separate spacers required. A work saving method : Only to clip onto the reinforcing bars.

How to order : Please specify cover, wall thickness and rebar diameter

Plastic Heavy Duty Chair Spacer (HD)

Heavy Duty Chair Spacer are of robust construction to provide firm support for bottom reinforcement in standard slabs, large area steel support with large load-bearing (Heavy-duty).

Applications

Heavy Duty Chair Spacer are suitable for supporting reinforcement for slabs, floors and beams.

How to order : Please specify cover and rebar diameter

New Plasclips (NC)

New plasclips have a wide base to provide stability. It has a specially designed head to accommodate a wider range of bar size from $\phi 4\text{mm}$ - 16mm.

Applications

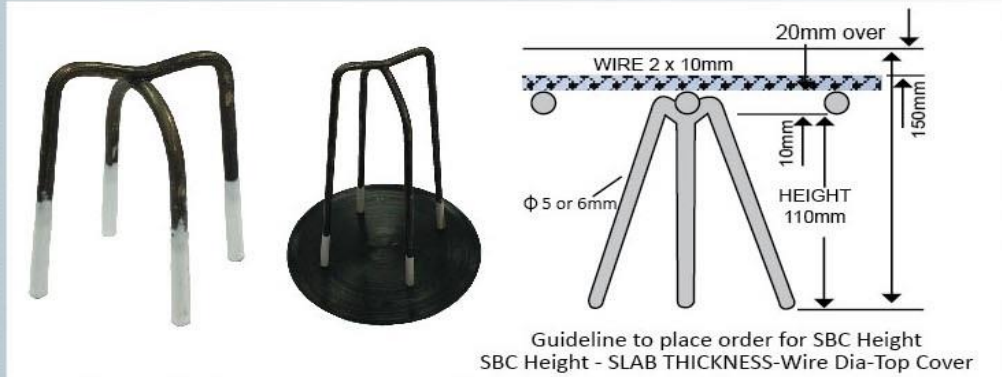

New plasclips provides a stable support for horizontal reinforcement in slabs, floors and beams.

How to order : Please specify cover and rebar diameter

BUILDING MATERIAL SPACER

Steel Bar Chair (SBC)

An advantageous and successful spacer for top reinforcement. Bar chair are made of machine bent hard drawn steel wires of ϕ 5-6mm with plastic capsat legs to prevent rusty. It has a wide base and a height of 20-300mm.

Height (mm)	Std. Pkg (Pcs/Ctn)
20, 25, 30	500
50, 60, 70, 80, 90, 100, 110	200
120, 130, 140, 150, 160, 170, 180, 190, 200, 210	100
