

## Position sensing cylinders using absolute type

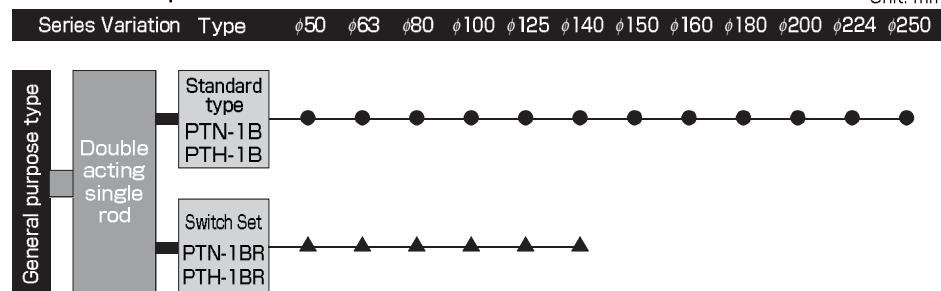

- The position sensor applying a magnetostrictive phenomenon enables high-accuracy absolute position detection.
- No sensor is needed for original position setting, and position correction is not required.
- Space-saving design and easy to install.
- Since cushions can be provided as standard, they can be used for general switching valves without any problem.
- They are applicable to wide variations of highly appreciated 70/140H-8 Series.

### Standard Specifications

- Above shown are the specifications for the sensor only.
- A larger value of two values of each accuracy item is applicable.
- In the mounted state on the cylinder, the above accuracy cannot be assured due to deformation of cylinder elements caused by pressure and load.
- For the repeatability under the same conditions, a value close to the above accuracy can be obtained because the deformation of cylinder elements is similar.
- The output is 4.0 to 4.5 mA at the cylinder retracting end and 12 to 20 mA at the cylinder advancing end. (In some cases, part of the effective length of the sensor is not used depending on the cylinder stroke.)
- Set the controller parameters based on the actual output at the cylinder advancing and retracting ends.
- For sensors with adjustable output at the advancing and retracting ends, contact us.

### Stroke Range

Bore	Standard	Semi-standard
φ50	50 to 500	501 to 1200
φ63・φ80	50 to 500	501 to 1600
φ100	50 to 500	501 to 2000
φ125 to φ160	—	50 to 2000
φ180 to φ250	—	50 to 2000

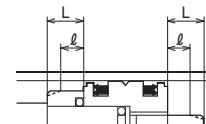

- The above strokes indicate the maximum available strokes for the standard type. Contact us for other strokes.
- For the rod buckling, check with the buckling chart in the selection materials.

### Cushion Stroke Length

Type	Cushion ring length L	Cushion ring parallel part length $\ell$
φ50・φ63	25	7
φ80 to φ125	25	8
φ100 to φ160	30	12
φ180 to φ224	40	20
φ250	45	25

- The cushion stroke lengths in case of cylinders used up to the stroke end.
- In the case that a cylinder is not used up to the stroke end, and it is stopped 5 mm or more before the stroke end, the cushioning effect will be weakened.

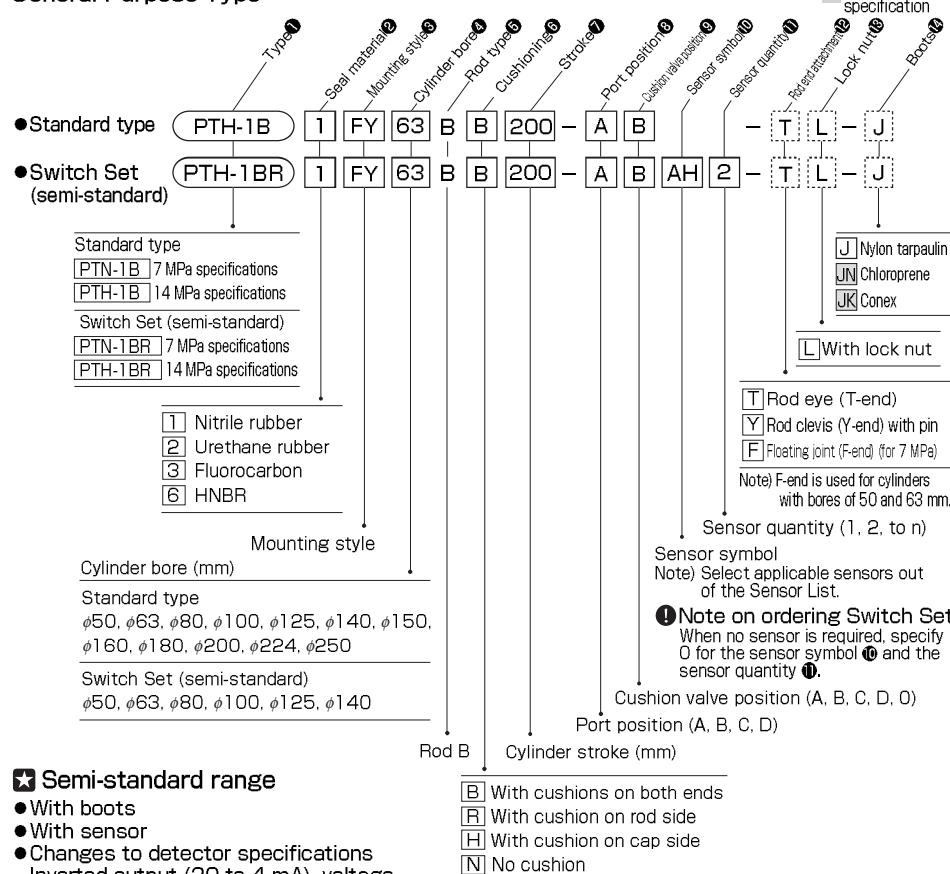

In such a case, consult us.

## ● How to order

### General Purpose Type

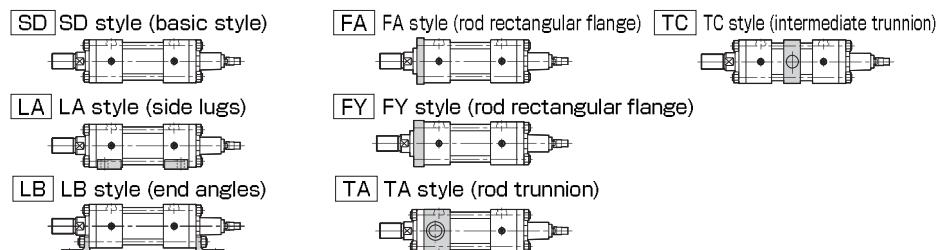

The item enclosed by broken line needs not to be entered, if unnecessary.

### Semi-standard range

- With boots
- With sensor
- Changes to detector specifications  
Inverted output (20 to 4 mA), voltage output (0 to 10 V), digital output, etc.
- Change of piston rod end (dimensional symbol: W, A, KK)
- Other material
- Change of TC accessory position (dimensional symbol: PH)
- Plated cylinder tube (hard chrome plating thickness: 0.02 mm)

Notes) ● For the sensors without a protective circuit, be sure to provide a protective circuit (SK-100) with the load when using any induction load (relay, etc.).

- The output logic of AX and AZ135CE is B contact. When the piston is detected, the sensor contact turns off (the lamp turns on).
- For the details of sensors, be sure to read the sensor specifications at the end of this catalog.
- All AX type sensors can be mounted. For types other than the above, refer to the sensor specifications at the end of this catalog.
- WR/WS, AX\*W and AZ\*W type sensors are cutting oil proof.
- Sensor SR405 can be mounted only to cylinders with bores from 32 to 125 mm.

### ● General purpose type AX type sensor

### ● Cutting oil proof type WR/WS type sensors

- When ordering the cutting oil proof type sensors, WR and WS types, please be careful about the following points.

- 5 WR505 The sensor and straight box connector (F-SB) are combined (the flexible tube F-O.5; 4.8 m is required).
- 7 WR505F The flexible tube (F-O.5; 4.8 m) is attached to the sensor and straight box connector (F-SB).
- 4 WS215-1F

## PQCPA Series dedicated to analog/pulse output position sensing cylinders

- Environmentally-friendly lead-free indicator.
  - Analog input and pulse input types are available.
  - Provided with multi-point output function (5 points) as a standard function to enable to individually set the upper and lower limits.<sup>Note 1)</sup>
  - A 16-bit AD converter is provided to realize high resolution. (Analog input type)
  - Provided with a counter with a response frequency of 200 kHz (Pulse input type)
  - Provided with a pulse position correcting function.<sup>Note 2)</sup>
- Note 1) Setting the bank switching enables to use the multi-output function of up to 15 points.
- Note 2) Position correction can be made by mounting a cylinder sensor. Positional error caused by slippage of the encoder is eliminated.

How to order cable between sensor and indicator

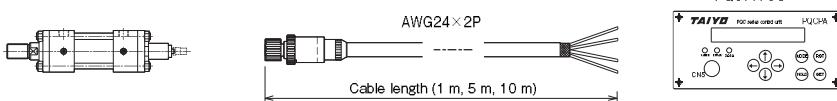

\* When ordering a cable, confirm the series name of the actuator on the sensor side.

Some models cannot be connected.

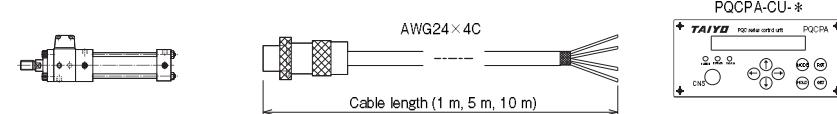

\* After wiring, connect the indicator side connector to the CN1 connector on the indicator.

**PQCPA-CV1-[Cable length]**

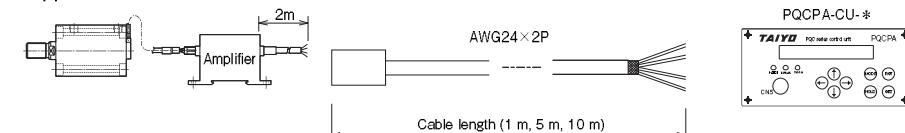

Applicable actuators: PTH-1B/PTN-1B/PTT-1B

**PQCPA-CV2-[Cable length]**

Applicable actuators: 35P-3/70P-8/140P-8

**PQCPA-CV3-[Cable length]**

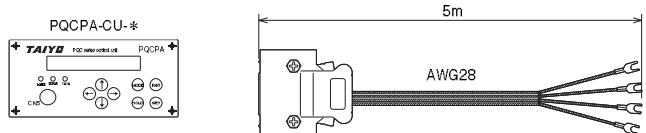

Applicable actuators: PSR-1A

Note) PSR-1A comes with a 2m cable as a standard accessory. If another cable is required, select this cable. (In this case, disconnect the standard cable (2 m) of PSR-1A, and connect the selected cable directly to the amplifier.)

**How to order I/O cable****PQCPA** – **IO**

\*The I/O cable is 5 m long.

CN3 Half-pitch connector

Note) Only the CN3 half-pitch connector is supplied as a standard accessory.  
If you need the connector with a cable, place an order for the connector.**Discontinued**

## Sensor Additional Weight

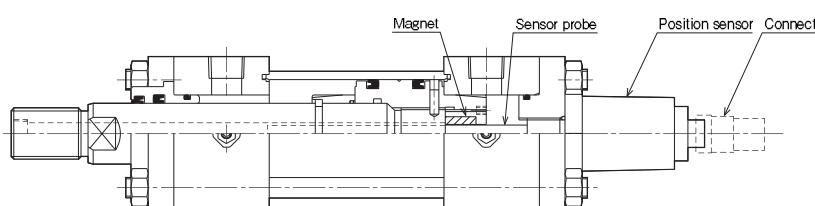

Unit: kg

Symbol	AX type			WR/WS type
	Cord length 1.5 m	Cord length 5 m	Connector type	
φ50	0.05	0.13	0.04	0.5
φ63	0.07	0.14	0.06

φ125	0.09	0.16	0.07	
φ140	0.09	0.16	0.08	

Calculation formula: Cylinder weight (kg) = basic weight + (cylinder stroke (mm) × additional weight per mm of stroke) + (sensor additional weight × sensor quantity) + mounting accessory weight + rod end attachment weight

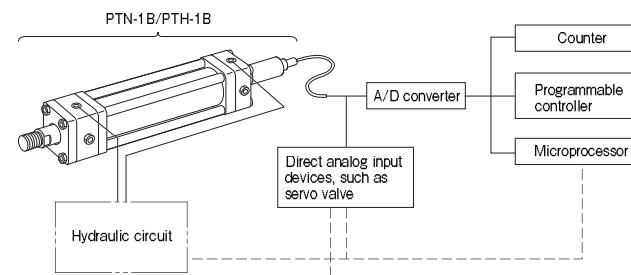

Calculation example: PTH-1BR, bore φ80, cylinder stroke 200 mm, 2 pcs of AX101 (cord length 1.5 m), LA style  
 $18.9 + (0.032 \times 200) + (0.05 \times 2) + 1.8 = 27.2\text{kg}$

## Sectional Drawing

Note) The structure differs slightly depending on the cylinder bore and the position sensor type.

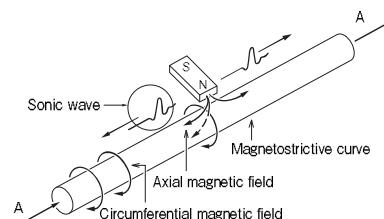

## Application Example

The cylinder position and operation can be checked on the counter, and position adjustment and inching can be easily performed by manual operation.

When combined with a personal computer or a microprocessor, the cylinder can be decelerated and stopped at any position.

## Principle of Operation of Position Sensor

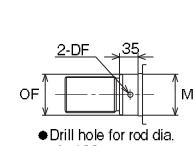

The figure shows the basic principle. When a current pulse shown by arrow A is given to the magnetostrictive curve, a circumferential magnetic field is generated on the magnetostrictive curve. When a magnet is positioned as shown in the figure, an axial magnetic field is given only to the position, and a diagonal magnetic field as shown by the dotted line is generated, thereby causing torsion in this part of the magnetostrictive curve. Since this torsion is a kind of vibration, it propagates at the sonic speed on the magnetostrictive curve which is a metallic tube. PTN-1B and PTH-1B Series use absolute type position sensors which measure the propagation time at the supersonic speed to find the magnet position.

- The above figure shows a cylinder with bores from 63 to 100 mm. The shape of the sensor area differs depending on the bore.

- When using the SD style, refer to the "Precautions for Use" at the beginning of this catalog.
- For the thread length (dimension A) in case of using the lock nut, refer to "Accessories".
- Some piston rods have a through hole for fitting a sensor ( $\phi 13$  to  $\phi 16$ ). If a hole is made, the thickness may be excessively reduced. It is recommended to use a lock nut to lock the rod end attachment.
- When drilling is performed to use a hex. screw, the drilling depth must be 2 mm or less. Do not use a spring pin.
- Switch Set Cylinders ( $\phi 50$  to  $\phi 140$ ) are manufactured as semi-standard models. For the mounting of sensors, refer to the dimensional drawings of "Switch Set".
- The shape of the sensor fitting area differs depending on the cylinder bore.

- The above figure shows a cylinder with bores from 63 to 100 mm. The shape of the sensor area differs depending on the bore.

- For the thread length (dimension A) in case of using the lock nut, refer to "Accessories".
- Some piston rods have a through hole for fitting a sensor ( $\phi 13$  to  $\phi 16$ ). If a hole is made, the thickness may be excessively reduced. It is recommended to use a lock nut to lock the rod end attachment.
- When drilling is performed to use a hex. screw, the drilling depth must be 2 mm or less. Do not use a spring pin.
- Switch Set Cylinders ( $\phi 50$  to  $\phi 140$ ) are manufactured as semi-standard models.
- For the mounting of sensors, refer to the dimensional drawings of "Switch Set".
- The shape of the sensor fitting area differs depending on the cylinder bore.

- Bore  $\phi 50$  to  $\phi 160$

- The above figure shows a cylinder with bores from 63 to 100 mm. The shape of the sensor area differs depending on the bore.

- For dimensions not shown here, refer to the SD style.
- For the thread length (dimension A) in case of using the lock nut, refer to "Accessories".
- Some piston rods have a through hole for fitting a sensor ( $\phi 13$  to  $\phi 16$ ). If a hole is made, the thickness may be excessively reduced. It is recommended to use a lock nut to lock the rod end attachment.
- When drilling is performed to use a hex. screw, the drilling depth must be 2 mm or less. Do not use a spring pin.
- Switch Set Cylinders ( $\phi 50$  to  $\phi 140$ ) are manufactured as semi-standard models.
- For the mounting of sensors, refer to the dimensional drawings of "Switch Set".

## Minimum dimension PH of Switch Set Cylinders PTN-1BR and PTH-1BR

- The minimum dimension PH of a Switch Set Cylinder is obtained when the sensor is mounted on the rod side and the trunnion is moved as close to the rod as possible as shown above.

When boots are provided, dimension W changes.  
In such a case, specify dimension PH.

Notes) ● The insertion of the floating joint into the socket shall not equal or exceed the dimension of screw diameter. (Return the joint one or two turns after it gets into contact with the socket bottom, and fix it with a lock nut.) Excessive insertion can cause operation failure.

● DO NOT use together with TA and TC accessories.

● When using the floating joint, use the lock nut.

● Make an order for the cylinder rod end lock nut at the same time.

## Lock nut

The standard fitting length of the rod end attachment and piston rod is about 80% of the thread diameter. If the fitting length is insufficient due to the use of the lock nut, it is necessary to increase the thread length (dimension A) as shown below.

## Notes on assembly

## Tightening of tie rods

- DO NOT tighten only one tie rod at a time, but tighten them gradually in the order shown in the right diagram. Uneven tightening of the tie rods can cause operation failure or stick-slip.
