

## Aluminum body, compact design hydraulic cylinders in pursuit of cost performance

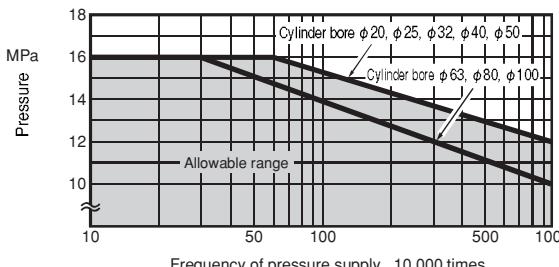

- Wide selection of models is available with cylinder bores from 20 mm to 100 mm.
- Light-weight, compact design hydraulic cylinders with bodies constructed of special aluminum alloy.
- Cost-effective selection is available based on frequency of operation and working pressure.
- Operates at up to 16 MPa depending on the frequency of pressure supply.
- Special copper alloy bearings are adopted to improve wear resistance.

### Standard Specifications

| Type  | General purpose type  | Cutting oil proof type |
|---|---|------------------------|
| Nominal pressure  | 10 MPa  |                        |
| Maximum allowable pressure                              | 16 MPa (Refer to the working pressure range diagram.)   |                        |
| Proof test pressure                                     | 20 MPa  |                        |
| Minimum operating pressure                              | 0.3 MPa   |                        |
| Working speed range                                     | 8 to 100mm/s  |                        |
| Working temperature range (ambient temp. and oil temp.) | Standard type ..... -10 to +70°C<br>Switch Set AX/AZ type, T type ..... -10 to +70°C<br>WR/WS type ..... -10 to +60°C (No freezing) |                        |
| Structure of cushioning                                 | None  |                        |
| Adaptable fluid   | Petroleum-based fluid<br>(When using another fluid, refer to the table of fluid adaptability.)                                      |                        |
| Tolerance for thread                                    | JIS 6H/6g   |                        |
| Tolerance of stroke                                     | 0 to 0.8mm  |                        |
| Mounting style  | SD, LD, FA, FB  |                        |
| Rod end threads   | Female thread and male thread   |                        |
| Applicable sensor for Switch Set                        | (φ20, φ25)<br>T type<br>100S-1R: (φ32 to φ100)<br>AX/AZ type<br>WR/WS type  | 100SW-1R:WR/WS type    |

### Working Pressure Range Diagram

### Terminologies

#### Nominal pressure

Pressure given to a cylinder for convenience of naming. It is not always the same as the working pressure (rated pressure) that guarantees performance under the specified conditions.

#### Maximum allowable pressure

Maximum allowable pressure generated in a cylinder (surge pressure, etc.).

#### Proof test pressure

Test pressure against which a cylinder can withstand without unreliable performance at the return to nominal pressure.

#### Minimum operating pressure

Minimum pressure at which cylinder installed horizontally operates under no load.

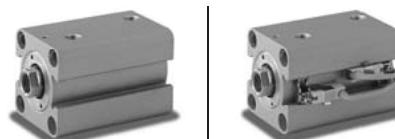

Notes) ● This series of cylinders does not have air vents.  
● Since side load (eccentric load) must not be applied to the piston rod, take care when installing the cylinder.

### Product Lineup

|                      | Series Variations        | Type          | Mounting style | φ20 | φ25 | φ32 | φ40 | φ50 | φ63 | φ80 | φ100 |

Notes) ● When using a sensor, use a Switch Set Cylinder.  
● No sensor can be mounted onto the standard type cylinder.

#### Double acting single rod

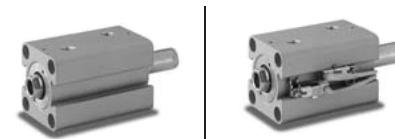

Standard type (100S-1·100SW-1)  
Switch Set (100S-1R·100SW-1R)

● The general purpose type and cutting oil proof type have the same dimensions.

#### Cutting oil proof type

● This type of cylinders can be used in a place where they are exposed to cutting oil (coolant) for machine tools.  
● The adaptability of seal materials to cutting oil is shown right.

#### Double acting double rod

Standard type (100S-1D·100SW-1D)  
Switch Set (100S-1RD·100SW-1RD)

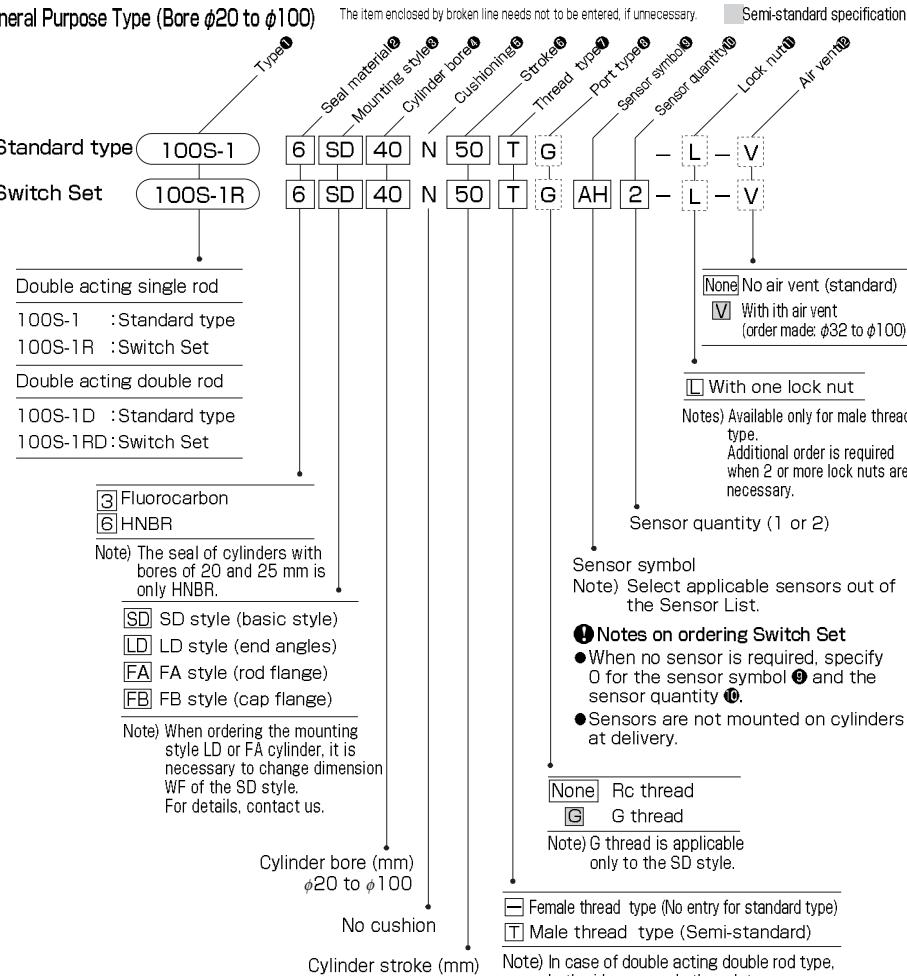

#### Adaptability of Seal Material (HNBR) to Cutting oil

| Nonaqueous cutting oil | Aqueous cutting oil |
|------------------------|---------------------|
| Type 1                 | Type 2              |
| ○                      | ×                   |

○ : Applicable × : Inapplicable

## ● How to order

General Purpose Type (Bore  $\phi 20$  to  $\phi 100$ )

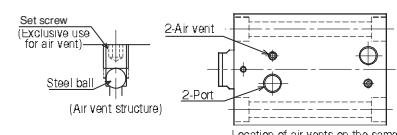

## Adaptability of Fluid to Seal Material

| Seal material           | Adaptable fluid       |                    |                       |                    |                    |
|-------------------------|-----------------------|--------------------|-----------------------|--------------------|--------------------|
|                         | Petroleum-based fluid | Water-glycol fluid | Phosphate ester fluid | Water in oil fluid | Oil in water fluid |
| <b>[3] Fluorocarbon</b> | ○                     | ×                  | ○                     | ○                  | ○                  |
| <b>[6] HNBR</b>         | ○                     | ○                  | ×                     | ○                  | ○                  |

Notes) 1. ○ : Applicable × : Inapplicable  
2. The ○-marked items are recommended seal materials in case of giving the first priority to abrasion resistance.

## ★ Specification of air vent (order made)

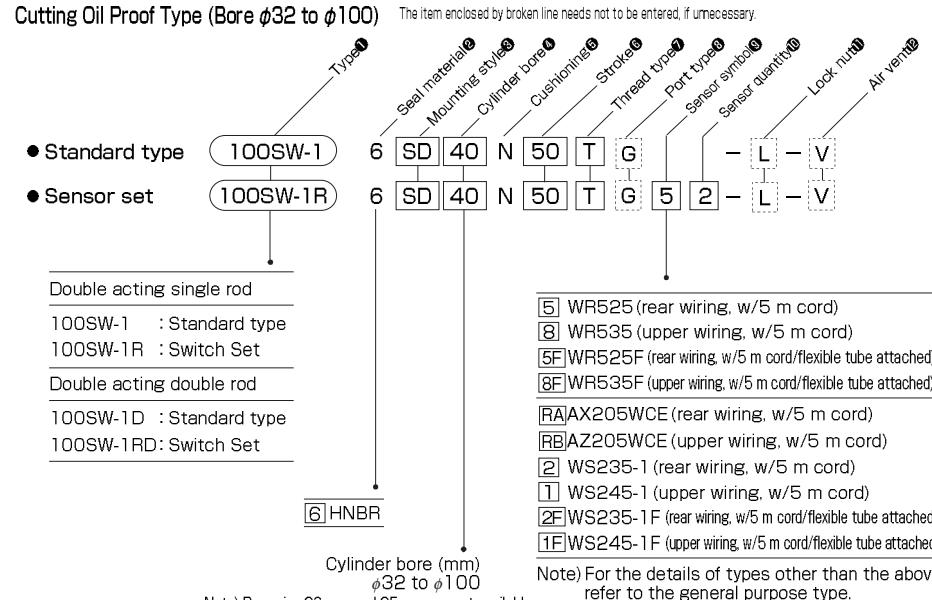

The air vents are laid on the port surface and located symmetrical positions to the ports.

Applicable to : Single rod, double rod  
SD/LD/FA/FB style  
Bore  $\phi 32$  to  $\phi 100$

## ● How to order

Cutting Oil Proof Type (Bore  $\phi 32$  to  $\phi 100$ )

## Cutting Oil Proof Type: Adaptability of cutting oil to seal material

| Seal material   | Nonaqueous cutting oil |        | Aqueous cutting oil |
|-----------------|------------------------|--------|---------------------|
|                 | Type 1                 | Type 2 |                     |
| <b>[6] HNBR</b> | ○                      | ×      | ○                   |

Note) ○: Applicable ×: Inapplicable

## ★ Port G thread type (only for SD style)

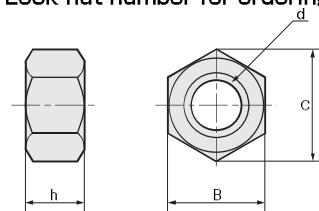

● Please specify the code as following.

(Example) 100S-1 6SD63N30-G

Port G thread type

Note) ● The port G thread has dimensions different from the standard dimensions depending on the bore.  
Refer to the dimensional tables.

## ★ Lock nut number for ordering

## Dimensional Table

| Bore       | Part number | d        | B  | C    | h  |
|------------|-------------|----------|----|------|----|
| $\phi 20$  | LNH-10F-H   | M10×1.25 | 17 | 19.6 | 6  |
| $\phi 25$  | LNH-12F-H   | M12×1.25 | 19 | 21.9 | 7  |
| $\phi 32$  | LNH-16F-H   | M16×1.5  | 22 | 25.4 | 10 |
| $\phi 40$  | LNH-20F-H   | M20×1.5  | 27 | 31.2 | 12 |
| $\phi 50$  | LNH-24F-H   | M24×1.5  | 32 | 37.0 | 14 |
| $\phi 63$  | LNH-30F-H   | M30×1.5  | 41 | 47.3 | 17 |
| $\phi 80$  | LNH-39F-H   | M39×1.5  | 55 | 63.5 | 20 |
| $\phi 100$ | LNH-48F-H   | M48×1.5  | 70 | 80.8 | 26 |

### Sensor List (Bore $\phi$ 20 and $\phi$ 25)

| Type               | Sensor symbol | Load voltage range     | Load current range             | Max. switching capacity               | Protective circuit | Indicating lamp                     | Wiring method  | Cord length | Applicable load                            |

Notes) ● For the sensors without a protective circuit, be sure to provide a protective circuit (SK-100) with the load when using any induction load (relay, etc.).  
● For the details of sensors, be sure to read the sensor specifications at the end of this catalog.  
● We recommend AND Unit (AU series) for multiple sensors connected in series.  
For details, refer to AND Unit at the end of this catalog.

- General purpose type

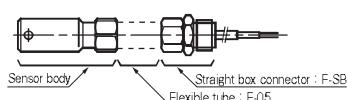

### Sensor Mountable Minimum Stroke

Notes) ● When using two sensors of the WR or WS type, they cannot be mounted on the same surface.  
● When two read sensors are used on one surface at a stroke of 10 mm, adjust their positions because the sensors may interfere with each other.  
\* If you want to mount AX or AZ type solid state sensors to a 10 mm stroke cylinder, use two sensor mounting grooves.

#### ■ Notes on ordering WR or WS type sensors

- When ordering the cutting oil proof type sensors, WR and WS types please be carefully the following notification.

|  |  |
|--|--|
| <input type="checkbox"/> WR525               | The sensor and straight box connector (F-SB) are combined (the flexible tube (F-0.5 : 4.8 m) is required). |

(Notes) ● For the sensors without a protective circuit, be sure to provide a protective circuit (SK-100) with the load when using any induction load (relay, etc.).  
● The output logic of AX and AZ135CE is B contact. When the piston is detected, the sensor contact turns off (the lamp turns on).  
● For the details of sensors, be sure to read the sensor specifications at the end of this catalog.  
● WP and WS type sensors are cutting oil proof.

#### ● Standard type

#### **AX type (rear wiring)**

### A7 type (inner wiring)

● Cutting oil proof type

- ### • Cutting off proof

○ : Standard range

□ : Semi-standard range (The leadtime varies depending on the bore and stroke. For details, contact us.)

● For the minimum stroke of the Switch Set, refer to the sensor mountable minimum stroke table.

Note 1) 20 mm and 25 mm bore cylinders with a stroke of 5 mm have the same body size as those with a stroke of 10 mm.

## Weight Table: General purpose and cutting oil proof types

Unit: kg

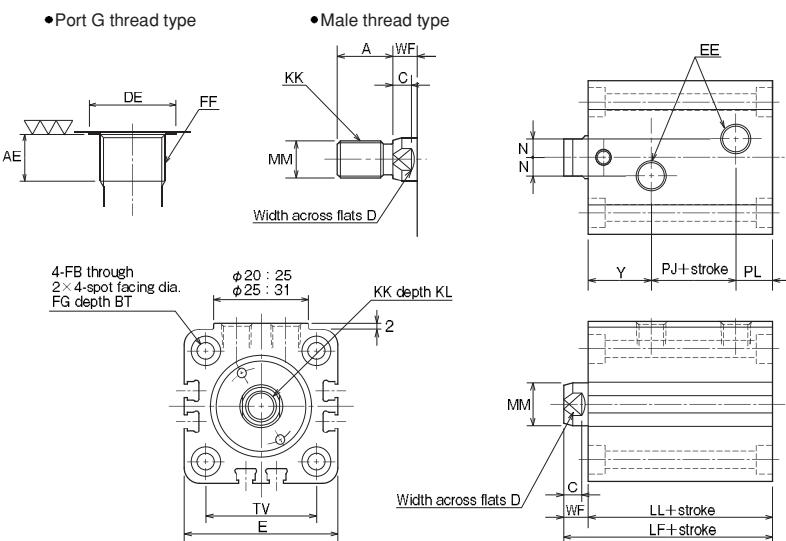

| Series variations    | Type                     | Bore                 | Cylinder stroke (mm) |      |      |      |      |      |      |      |      |      | Mounting accessory additional weight | Separate flange joint (M-end) weight | Male thread additional weight |      |      |

|------------------------|---------|------|------|----------|-----------------|
| General purpose type   | 100S-1  | 6 SD | Bore | N Stroke | T (φ20 to φ100) |
| Cutting oil proof type | 100SW-1 | 6 SD | Bore | N Stroke | T (φ32 to φ100) |

None : Female thread type  
T : Male thread type

● Bore φ20 and φ25

● Bore φ32 to φ100

● For the mounting of sensors, refer to the "dimensional drawings of Switch Set".  
All the contents other than sensor mounting dimensions are the same.

Notes) ● When the lock nut is used, the parenthesized dimension A is recommended. (Order made)  
 ● The lock nut needs to be ordered separately.  
 ● 20 mm and 25 mm bore cylinders with a stroke of 5 mm have the same body size as those with a stroke of 10 mm.  
 ● 20 mm and 25 mm bore sizes of the cutting oil proof type are not available.  
 ● The tolerance of MM is f8.

## ● Upper wiring

AZ205W(solid state sensor)  
WR535(reed sensor)  
WS245-1(solid state sensor)

\* The 100 mm bore cylinder has mounting grooves in three surfaces.

**Change of Rod End Shape**

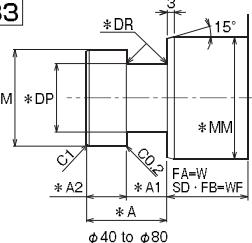

■ You can specify the shape and dimension of the rod end as shown below using the semi-standard symbols and dimension symbols. (No need to specify the dimension symbol if you order a cylinder with the basic dimensions. Specify only the semi-standard symbol.)

**How to order**

Series Model number - X

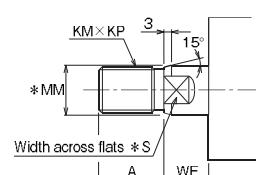

Semi-standard symbol Dimension symbol (Specify only when the dimension differs from the basic dimension.)

KM and KP need to be specified as a pair.

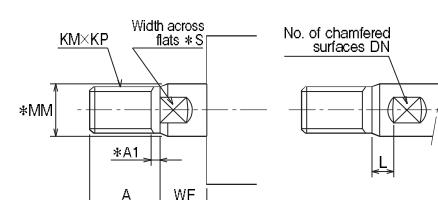

**Example A83**

Note) In the case of this shape, only dimension WF can be changed.

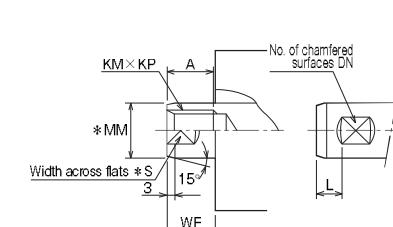

- Bore  $\phi 40$ , rod end shape: A83, WF=60  
100S-1 6SD40N50T-X A83  
WF-60

## Setting method of sensor detecting position

T type sensor ( $\phi 20$  and  $\phi 25$ )

1. Fit the sensor into the groove as shown left.
2. Slide the sensor to any position. Installing in the center of operating range provides the most stable detection.
3. To detect the cylinder stroke end, mount the sensor at dimension UX (optimum setting position).
4. After sliding the sensor to the detecting position, tighten the mounting screw.

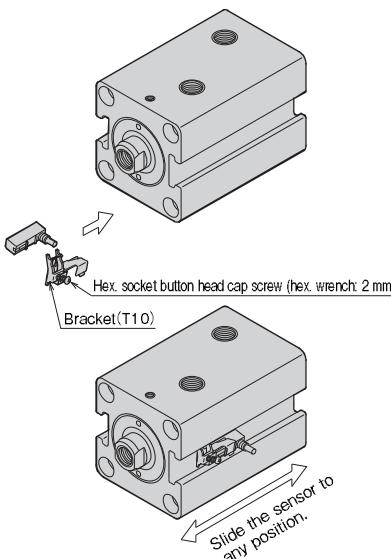

## Torque of Mounting Screw

| Sensor type                    | T0-T5-T2-T3                   | T2Y                                   |
|--------------------------------|-------------------------------|---------------------------------------|
| Nominal dia. of mounting screw | M2.5                          | M3                                    |
| Mounting screw tightening tool | Precision slotted screwdriver | Small-sized Phillips-head screwdriver |
| Tightening torque              | Approx. 0.1 to 0.2 N·m        | Approx. 0.4 N·m                       |

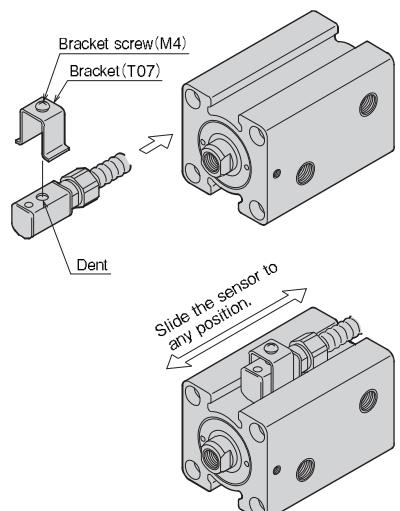

Note) If the tightening torque is improper, the sensor may be dislocated, or the sensor body may be damaged.

AX/AZ type sensor ( $\phi 32$  to  $\phi 100$ )

AX/AZ type bracket screw tightening torque :  
Approx. 0.4 N·m

WR/WS type sensor ( $\phi 32$  to  $\phi 100$ )

WR/WS type bracket screw tightening torque :  
Approx 0.6 N·m

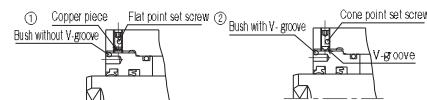

1. Loosen the bracket screw, and fit the bracket in the center of the sensor.
2. Insert the sensor combined with the bracket into the sensor mounting part of the cylinder body.
3. Slide the sensor to any position. Installing in the center of operating range provides the most stable detection.
4. To detect the cylinder stroke end, mount the sensor at dimension UX (optimum setting position).
5. After sliding the sensor to the detecting position, tighten the bracket screw.

Note) If the tightening torque is improper, the sensor may be dislocated, or the sensor body may be damaged.

## Precautions for use

- When using the cylinder with stroke adjuster tighten the screw(s) to the rod end completely so that no load is applied to the piston rod screw section.
- Since side load (eccentric load) must not be applied to the piston rod, take care when installing the cylinder.
- When operating the cylinder for the first time, discharge air from the piping. After discharging air, run the cylinder at a reduced pressure, and gradually increase the pressure to the working pressure.  
Note) Since 100S-1 Series has no air vents, take air bleeding from the piping.
- To install the cylinder, use four hex. socket head cap screws (JIS B1176, strength class 10.9 or more).
- When using mounting bolts, screw the bolts into mounting materials by 80% or more of the screw diameter. The material of the mounting materials must have strength equal to SS400.
- When using nuts to tighten mounting bolts, use steel nuts with a strength class of 6 or more. (However, DO NOT use the type-3 nuts.)
- When using mounting bolts to secure the cylinder body, be sure to tighten them according to the following specified torque.

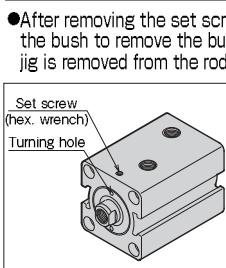

## Components Combination List

| No. | Screw on bush    | Copper piece | Set screw type |
|-----|------------------|--------------|----------------|
| ①   | Without V-groove | Required     | Flat point     |
| ②   | With V-groove    | -            | Cone point     |

## Seal replacement

- When disassembling the cylinder, replace all seals.
- General purpose types (100S-1, 100S-1D, 100S-1R and 100S-1RD): The piston seals, rod seals, dust wipers and bush O-rings are replaceable.
- Cutting oil proof types (100SW-1, 100SW-1D, 100SW-1R and 100SW-1RD): The piston seals, rod seals and bush O-rings are replaceable. The dust wiper 1 of any cutting oil proof type cylinder has been press-fitted into the bush, and is integrated with the bush. Although it can be removed, doing so may damage the bush. It is recommended to replace the bush as well when replacing the dust wiper. The dust wiper 1 is not included in the seal set. If it is necessary, separately make an order.
- Since the piston and rod have been locked, the piston rod O-ring cannot be replaced.
- Dimensions of bush turning hole

Note) A copper piece may have been set under the set screw.

\* General purpose type: Bore  $\phi 20$  to  $\phi 100$  \*Cutting oil proof type: Bore  $\phi 32$  to  $\phi 100$

| Unit : mm |   |   |     |            |    |    |     |
|-----------|---|---|-----|------------|----|----|-----|
| Bore      | a | d | PCD | Bore       | a  | d  | PCD |
| $\phi 20$ | 4 | 4 | 23  | $\phi 50$  | 8  | 5  | 46  |
| $\phi 25$ | 4 | 4 | 25  | $\phi 63$  | 8  | 5  | 58  |
| $\phi 32$ | 5 | 4 | 32  | $\phi 80$  | 10 | 8  | 70  |
| $\phi 40$ | 7 | 4 | 38  | $\phi 100$ | 12 | 10 | 85  |

**Interpretation of usable range**

1) 100S-1 Series has product life expectancy of 10 million times or more at the rated pressure of 10 MPa.

**2) How to determine the working pressure range**

- The fatigue life is determined by the results of fatigue test of actual cylinder and the values obtained by statistically processing the test data.
- The life distribution is determined from the data of the fatigue test of actual cylinders, and the working pressure range is obtained based on the values with a failure probability of 1% in the distribution.

Note) No point of 0% exists in terms of statistical technique.

**3) The working pressure is the pressure generated in a cylinder.**

- The working pressure is not the set pressure of the relief valve.
- In the cylinder, a pressure higher than the set pressure of the relief valve can be generated due to surge pressure caused by valve switching.
- Design the hydraulic circuit so that surge pressure hardly occurs.
