Technical Data Pilot II MIO

Product description

Pilot II MIO is an alkyd based topcoat containing micaceous iron oxide.

Recommended use

Steel structures as topcoat over Pilot Primer.

Film thickness and spreading rate

	Minimum	Maximum	Typical
Film thickness, dry (µm)	30	50	40
Film thickness, wet (µm)	70	115	95
Theoretical spreading rate (m²/l)	19	11,4	14,5

Physical properties

Colour Dark grey, Grey

Solids (vol %)* 57 ± 2

Flash point 35°C

VOC 320 gms/ltr UK-PG6/23(97). Appendix 3

Gloss Semigloss
Water resistance Limited
Abrasion resistance Good

*Measured according to ISO 3233:1998 (E)

Surface preparation

Clean and dry surface. Surface contamination is to be removed by detergents and fresh water cleaning.

Other surfaces

The coating may be used on other substrates. Please contact your local Jotun office for more information.

Pilot II MIO Page 1 of 3

Condition during application

The temperature of the substrate should be minimum 3°C above the dew point of the air, temperature and relative humidity measured in the vicinity of the substrate. Good ventilation is usually required in confined areas to ensure correct drying.

Application methods

Spray Use airless spray

Brush May be used but care must be taken to achieve the specified dry film thickness.

Roller May be used for small areas but not recommended for first primer coat, however when using roller

application care must be taken to apply sufficient material in order to achieve the specified dry film

thickness.

Application data

Mixing ratio (volume) Single pack.

Thinner/Cleaner Jotun Thinner No. 2

Guiding data airless spray

 Pressure at nozzle
 15 MPa (150 kp/cm², 2100 psi)

 Nozzle tip
 0.015-0.021 (0.38-0.53 mm")

Spray angle 40-80°
Filter NB! No filter.

Drying time

Drying times are generally related to air circulation, temperature, film thickness and number of coats, and will be affected correspondingly. The figures given in the table are typical with:

- * Good ventilation (Outdoor exposure or free circulation of air)
- * Typical film thickness
- One coat on top of inert substrate

Substrate temperature	5°C	10°C	23°C	40°C
Surface dry	5 h	4 h	3 h	1 h
Through dry	25 h	14 h	7 h	3 h
Dry to recoat, minimum	36 h	18 h	16 h	12 h

The given data must be considered as guidelines only. The actual drying time/times before recoating may be shorter or longer, depending on film thickness, ventilation, humidity, underlying paint system, requirement for early handling and mechanical strength etc. A complete system can be described on a system sheet, where all parameters and special conditions could be included.

Typical paint system

Pilot Primer 1 x 40 μm (Dry Film Thickness)

Pilot II MIO Page 2 of 3

Other systems may be specified, depending on area of use

Storage

The product must be stored in accordance with national regulations. Storage conditions are to keep the containers in a dry, cool, well ventilated space and away from source of heat and ignition. Containers must be kept tightly closed.

Handling

Handle with care. Stir well before use.

Packing size

5 and/or 20 litre container.

Health and safety

Please observe the precautionary notices displayed on the container. Use under well ventilated conditions. Do not breathe or inhale mist. Avoid skin contact. Spillage on the skin should immediately be removed with suitable cleanser, soap and water. Eyes should be well flushed with water and medical attention sought immediately.

For detailed information on the health and safety hazards and precautions for use of this product, we refer to the Material Safety Data Sheet.

DISCLAIMER

The information in this data sheet is given to the best of our knowledge based on laboratory testing and practical experience. However, as the product is often used under conditions beyond our control, we cannot guarantee anything but the quality of the product itself. We reserve the right to change the given data without notice.
