

MIGEN NG-9

Intelligent Guard Tour System

The NG-9 Super Durable Guard Tour Reader employs many revolutionary new technologies in creating the ultimate guard tour product. The reader adopts three-layered protection design. And there is no button in the casing, which further enhances the impact resistibility of the reader. In factory, we've made hundreds of free-drop experiments on this model from 2 metres high on to concretes, and the results are satisfactory. In addition, the reader is completely sealed against liquids, so it can easily cope with diversified weather conditions. The rubber-covered surface of the NG-9 is non-conductive, and it is able to resist damage from electrical shocks of over 1 million volts even when applied directly to its exposed metallic section. This makes the reader safe to operate in high voltage environments such as near power generation equipment, and impossible to damage by using stun guns and other electrical power sources. The NG-9 Super Durable Guard Tour Readers works with the popular EM format signal cards, which are low in cost and have been widely used in guard tour systems as well as other applications including time and attendance, vehicle management, animal identification, parts management, etc.

- * Flexible rubber shell, strong to resist impact. Fully sealed design, waterproof.
- * Auto-induction, free pressing any button to read proximity station.
- * Wireless communication downloader.
- * Downloader with large LCD showing the transaction record, date, time and working indication.
- * We can print our report by selection of:
 - Site/Routes
 - Location
 - Person
- * Software report will match with guards actual patrol activities, automatically will preset plan and generate a result like **Late, Missing** and on time indication.

SPECIFICATIONS

Storage Capacity	: 8,000 Logs
Communication	: Wireless Data Downloader
Reading Speed	: < 0.2 second
Reading Distance	: < 5CM
Battery Type	: CR123A Lithium Battery
Operation Temperature	: -20°C ~ +70°C
Weight	: 150g
Dimension	: 142 x 32 x 40mm

Wireless Data Downloader

Transmission	: Wireless (with NG-9), USB (with computer)
Storage capacity	: 600,000 Logs
Working indication	: LED + LCD display + Beeps sound
Battery	: 3pcs AA battery
Weight	: 220g
Dimension	: 118 x 82 x 36mm
