

Automatic sliding door

Innovative. Dynamic. Attractive.

Characteristics of SLM drive-system technology

Program switch

The operating programs of the Kaba automatic door are selected by means of a key-operated program switch.

Locked The door is closed and locked. It can be opened using a key command.

Exit The door functions in one-way mode, with only one opening element (usually the inside unit) enabled to trigger the door-opening mechanism.

Automatic The door actuates whenever the opening element generates an impulse. It is not locked when in the closed position.

Manual/Open
The door opens and stops freely. The door can be operated manually.

AUTOMATIC DOOR SYSTEM

- Low-noise operator
- Sound-absorbent construction (acoustic version)
- Basic control module with two expansion modules and Hand terminal
- Wide choice of software programmable setting and flexible programming by hand terminal, either on site or in the factory
