

WHY ?

Tamper-Resistance Rat Bait Station TRBS XW

Several different type of Rodenticide bait containers or “Bait Station” are used in the pest management industry, we called it Tamper-Resistance Rat Bait Station or TRBS. TRBS may be apply at internal or external of the building for public area, large commercial food store, grocery store, shopping mall, zoological, food processing plant, pharmaceutical facilities and warehouse.

The purpose of TRBS is apply rodenticide in a location out of reach of public, children, pets, and non target wildlife. This TRBS must be locked the rodenticide from public and resistance to the destruction by dogs and children under 6 years old age. And the second reason is **TRBS create a food stock to long term supply slow action rodenticide to the rats.**

TRBS XW is using Polypropylene material with the size **240mm Length X 215mm width X 97mm Height. 560gm in weight.** It can last for sun light UV attack for 2 years every day.

Silk Screen Label is available for replace Traditional sticker to record the company Name, contact number, number of station and other detail for previous pest Management services.

The writing on the Silk Screen Label is able to be wiped off gentle with alcohol and tissue.

TRBS XW come along with key and bracket to lock it self on wall or on the ground.

The bracket is to make sure the location of TRBS XW has been installed at the proper places and not allow it move away from the wall. Otherwise can't attract rodent go in the station.

The distance of each station is 5 to 7 meter apart for the 1st and 2nd defenses, depend how big the building. And 3 to 5 meters apart in the 3rd defence inside the building. Each entrance of the building is needed to place 2 TRBS on the left and right.

TRBS XW can be fixed with multi types of bait, included liquid, pellets and blocks type. Put the bait inside a small container.

When the rodent population going down and monitoring purpose need to be applied, mechanical trap is able to fix into TRBS XW. It also suitable to apply at sensitive area like center of food processing plant.

Glue Board is available for TRBS XW. For the places need to be washed the floor, Plastic Folding glue board is a perfect match. It using recycle material and will be thermal decompose under sun light.

These bait stations will be placed along the wall and and in area you suspect rats are or have been.

TRBS XW can be put Folding Glue Board inside on it.

TRBS XW bait station is temper resistant that can be used for either rat or mice control. The station automatically closes with a key, making them safe to be around children, pets and non targeted animals.
