

How to use a pheromone trap

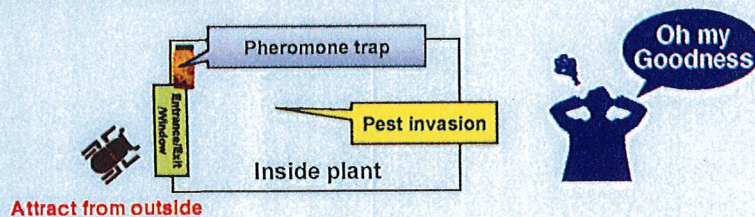

Step 1. Placement of Traps

- ☑ Draw grid lines every 10 meters in all areas inside the plant.
- ☑ Set a trap on each intersection point of the grid lines so the effective area does not overlap.
- ☑ Set traps on the wall so there are no gaps with the walls.
- ☑ **Avoid setting traps** at the production line.
- ☑ **Avoid setting traps** within 10 meters from the entrance/exit/window.

Why we shouldn't place traps near entrance/exit/window?

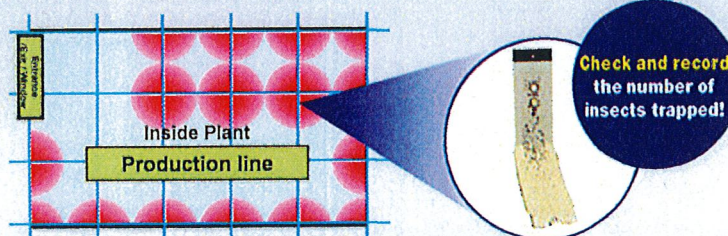

Example: Setting traps near entrance/exit/window

Setting traps at the entrance/exit/window could lead to serious problems...

Step 2. Inspection

After a certain period has elapsed...

Cautions for use

Consistent conditions are essential for regular inspections

- **Do not change** the trap locations!
- Conduct pest inspections on a **fixed schedule!** (Weekly inspections recommended)
- Replace traps on a regular basis! (Monthly replacements recommended)
