Coverage chart

Construction

Automatic pressure boosting plant consisting of three centrifugal pumps complete with ball, non return valve on the suction side and ball valves on the discharge side.

Suction and delivery manifolds are in steel.

Electrical control boards:

- with microprocessor for fixed speed pump units (see page 422). Motor starting is D.O.L. up to 5,5 kW and Y/Δ for power rating 7,5 up to 55 kW.
- with frequency converter for variable speed pump units (see page 423).

The unit includes one pressure gauge and three adjustable differential pressure switches or pressure transducer (for sets with frequency converter).

Operation

BS 3F Fixed speed pump

Depending on the reduction of the pressure in the system, the pressure switches determine the starting up of the pumps in sequence and the microprocessor alternates the starts.

BS1V2F Pumps at variable speed with one frequency converter

According to the water consumption, one or more pumps start, one at variable speed and the others at fixed speed, to grant the water quantity required at the set pressure.

BS3V Pumps at variable speed with three frequency converter

Depending on water consumption, one or more pumps are activated, all at variable speed, in order to guarantee the quantity of water required at the set pressure.

Applications

To supply water in civil and industrial buildings.

As pressure boosting pump to increase water pressure when needed (follow local rules).

Motors

2-pole induction motors, 50 Hz, n = 2900 rpm, suitable for operation with frequency converter.

- Three-phase 230/400V ± 10% up to 3 kW;
- 400/690V ± 10% from 4 to 55 kW.

Insulation class F.

Protection IP 54.

Constructed in accordance with: IEC 60034.

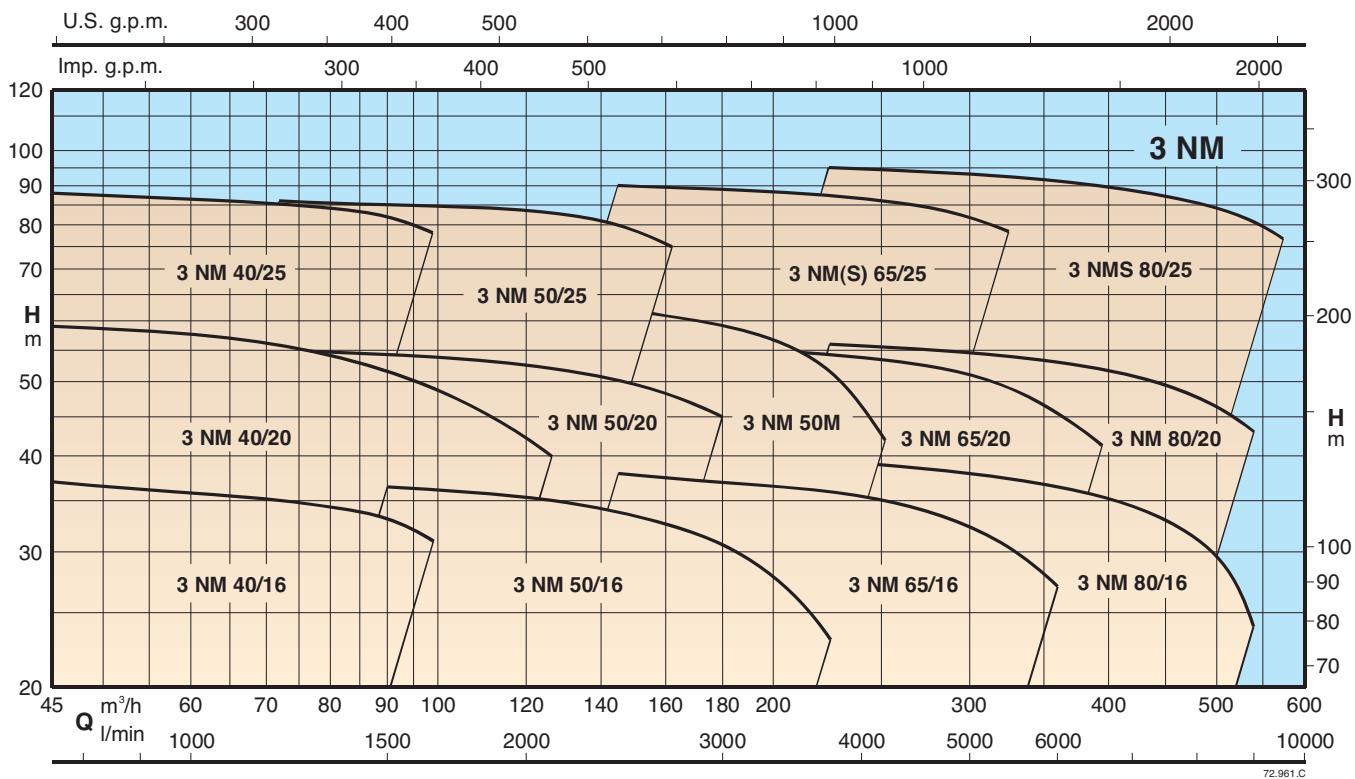

Other voltages and frequencies on request.

Vessels

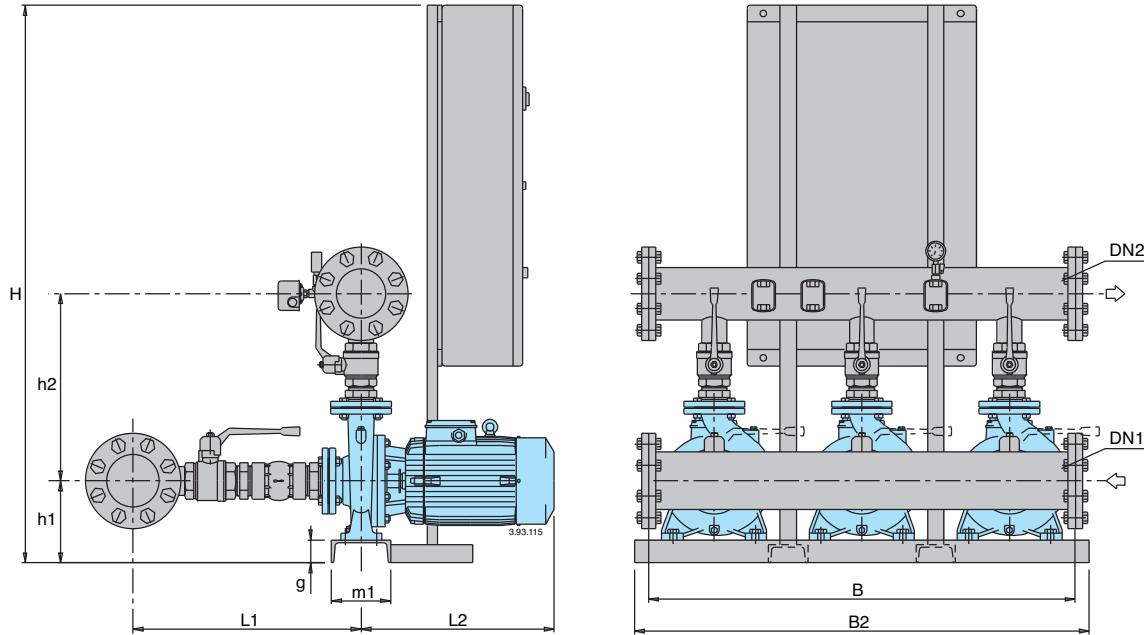

When installing the unit, connect in the delivery section to an air cushion vessel.

The recommended sized are shown in the following page.

Construction

- 1) Main pump
- 2) Main pump
- 3) Jockey pump
- 4) Butterfly valve in suction section (on request only for installation with positive head)
- 5) Vacuometer
- 6) Pressure gauge in delivery section
- 7) Ball valve for draining
- 8) Adjusted diaphragm
- 9) Non-return valve (accessible)
- 10) Butterfly valve for capacity-check system (on request)
- 11) Manifold for flow meter (on request)
- 12) Flow meter (on request)
- 13) Butterfly valve or ball valve in delivery section
- 14) Delivery manifold
- 15) Test circuit (manual) (one for each pump)
- 16) Pressure gauge
- 17) Starting pressure switches of main pumps
Starting pressure switch to stop jockey pump
- 18) Electric boxes (one for each pump)
- 19) Diaphragm tanks
- 20) Steel base for all pumps

All the butterfly valves or ball valve are locked in the normal position by means of a lock and key.
On request: anti-vibration couplings in both the suction and delivery sections.

Construction

Units constructed in accordance with UNI-EN 12845 standards for automatic fire-fighting systems (with sprinkler) and according to UNI 10779 for fire-fighting systems with fire hydrants.

The units may be composed of 1 or 2 main pumps.

Units are fitted with a jockey pump, with which the system pressure level can be maintained without having to start the main pumps.

Application

For feeding water to automatic fire-fighting systems and units with hydrants.

Operation

The pumps start operating after a fall in the pressure level in the fire-extinguishing system.

The first pump to be triggered is the jockey pump.

If this pump cannot restore the pressure level, the main pump starts. When there is more than one main pump, the pumps start in cascade sequence, with the starting pressure switches set at different pressure levels.

The pressure switches of the main pumps are used only for starting, as the pumps must be stopped manually for UNI-EN 12845 units or automatically with a timer for UNI 10779 sets.

The recirculation diaphragm allows for operation of the main pumps also when the delivery port is closed (with no consumption of water in the system), avoiding overheating of the water inside the pump body.

Weekly test (on request)

The programmable clock in the electric box controls the forced starting of the main pump (electric driven pump only).

The diaphragm avoids overheating of the water in the pump body.

Pumps

Main pumps

The main pumps can be :

N series: single stage horizontal centrifugal pumps

NMD series: centrifugal pumps with two impellers

MXV series: multistage vertical centrifugal pumps

SD-SDS- SDX series: submersible centrifugal borehole pumps

The N series centrifugal pumps are coupled with the electric or diesel motor through a bearing coupling. This solution allows to operate on the hydraulic part without moving the motor.

Jockey pump

Jockey pump can be a self-priming jet pump, a centrifugal pump with two impellers, a vertical multistage pump or a submersible borehole pump.

The maximum pressure developed by the jockey pump is always greater than the pressure of the main pumps.

Motors

Two-pole induction type, 50 Hz, $n = 2,900$ rpm

Three-phase 230/400V $\pm 10\%$ up to 3 kW

400/690V $\pm 10\%$ 4 kW and higher.

Insulation class F

Protection IP 54 for close coupled pumps, IP 55 for pumps with coupling and IP 68 for submersible borehole pumps.

Construction in accordance with: IEC 60034

Other voltage and frequency ratings available on request

Diesel motors (for standardised N-series pumps)

These are direct-injection pumps fitted with electric control box, fuel tank, starter batteries and silencer.

Hydraulic components

Each main pump is fitted with:

- Pressure and vacuum gauge in the suction section.
- Butterfly valve in the suction section (on request only for installation with positive suction head).
- Pressure gauge in the delivery section.
- Adjusted diaphragm.
- Pressure switch to indicate the pump is operating.
- Non-return valve of the accessible swing-type.
- Butterfly valve in the delivery section.
- Manual test circuit with pressure switches, pressure gauge, non-return valve and ball valve and cylindrical 20-liter (15 bar) tank (one for each pump).

The jockey pump is fitted with:

- Ball valve in the suction section (on request only if the pump has a positive suction head).
- Non-return valve and ball valve in the delivery section.
- Manual test circuit with pressure switch, pressure gauge, non-return valve and ball valve and cylindrical 20-liter (15 bar) tank (one for each pump).

Other components:

- Delivery manifold.
- Coupling for connection of a priming tank (only for the pumps installed with positive suction head).
- The suction manifold is never supplied as such execution is forbidden by the standards.
- The units with vertical multistage pumps and submersible borehole pumps with pressure higher than 6-7 bar are fitted with an adjustable safety valve to release the overpressure.

On request:

- Manifold for flow meter.
- Adjusted-flange, diaphragm type, flow meter.

Electric boxes

Electric main-pump box (electric motor)

Each main pump has its own electric control board housed in a metal cabinet with IP54 protection. The box contains the devices required for operation and control of the pump.

Motor starting is direct for power ratings up to 7.5 kW.

For motors with a rating equal to or higher than 11 kW pump starting is of the Y/A type with fuses, contactors and timer.

On request:

programmable clock for the weekly test.

Timer for pumps stop after 20 minutes (UNI 10779)

The following devices are located on the internal door panel:

- Line-sectioning handle - Voltmeter and ammeter with switch
- "Manual-0-Automatic" selector with extractable key only in "automatic" position - Start/Stop pushbuttons - Pilot lights to indicate: no-volt, pump running, voltage on.

Electric main-pump box (diesel motor)

This cabinet contains the electronic control devices for the control of the diesel motor and the battery chargers for feeding the starter accumulators.

The following devices are located on the front of the box:

- Line-sectioning handle.
- Front panel of the electronic unit.
- Manual-0-Automatic selector with extractable key only an "automatic" position.

Electric jockey-pump box

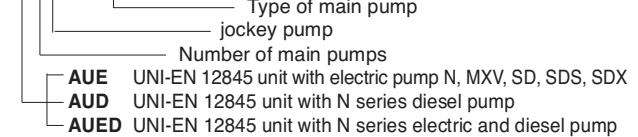

When installed, the jockey pump is fitted with its own electric panel, metal housing with IP 54 protection.

Control box (on request)

To be installed in a place to be looked after, to signal any possible failure of the unit state. It must be connected to V.220 and it gives an acoustic and visual signal for 24 hours.

	QM 35	35 µF	1,5	200x75x76

Construction

Control panel with ON-OFF switch and capacitor, for 1 submersible pump with single-phase motor without built-in capacitor.

Technical data

- Mains single-phase 230V ±10% 50/60 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 55.

Components

- Enclosure in thermoplastic material
- ON-OFF switch with lamp
- Capacitor
- Terminal board
- Cable glands

Construction

Control panel with ON-OFF switch and capacitor for 1 submersible pump with single-phase motor.

Suitable for use with LVBT board for level control.

Protection is provided by means of a main bi-polar switch with a phase. protected against overload by means of a thermal element.

Technical data

- Mains single-phase 230V ±10% 50/60 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 44.
- Control through pressure switch (pressure booster set).
- Control through float switch (for filling a tank).

Components

- Enclosure in thermoplastic material.
- ON-OFF switch with pilot lamp with thermal protector.
- Capacitor.
- Terminal board.
- Terminals for LVBT board for level control.
- In/Out cable glands.
- Power relay (for M COMP 18 only)

On request:

- LVBT card for level control.

PFC-M Power Factor Control Control panel for 1 submersible pump with single-phase motor, PF control

Type	Setting A	Capacitor 450Vc	Motor 50/60Hz 220V-240V - 1~ kW	Dimensions HxPxW mm
PFC-M 18-16	1 - 18	16 µF	0,37	220x210x110

PFC-M 18-60	1 - 18	60 µF	1,5	220x210x110
PFC-M 18-70	1 - 18	70 µF	2,2	220x210x110

Construction

Control panel for controlling one submersible pump with single-phase motor. Electronic control of the operation and dry-running protection through the power factor (PF) control.

The installation of level probes into the well is not required.

It stops the pump in case of lack of air cushion in the pressure vessel (patented system).

Displayed operating data and alarms available in four languages.

Technical data

- Mains single-phase 220-240V, 50/60 Hz.
- Max output current: 18 A.
- Ambient temperature from -5 °C to +40 °C.
- Relative humidity: from 20% to 90% without condensation
- Protection IP 55.
- Control through pressure switch (pressure booster set).
- Control through float switch (for filling a tank).
- Alarm output signal.
- Constructed in accordance with: IEC/EN 60439-1.

Setting

- Min – Max voltage range.
- Motor rated current.
- Power factor (PF) value for dry-running protection.
- Up to four programmable restarts in case of no water condition.

Alarms (with pump stop)

- Mains failure.
- Undervoltage and overvoltage.
- Motor overload.
- No water.
- No air cushion in the pressure vessel.

Components

- Enclosure in thermoplastic material.
- Capacitor.
- Terminal board.
- Display : 2x16 characters.
- 6 button key board.
- In/Out Cable glands.

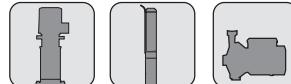

On request:

- RA 100 control panel for remote alarm.

QML 1 FT Control panel for 1 pump with single-phase motor, direct starting

Code	Type	Motor 230V - 1~	Setting A	Dimensions HxBxP mm
		kW		
---	QML 1 FT 0,37	0,37	1,6 - 2,5	200x255x170
	QML 1 FT 0,55	0,45 - 0,55	2,5 - 4	200x255x170
	QML 1 FT 0,75	0,75	4 - 6,5	200x255x170
	QML 1 FT 1,1	1,1	6,3 - 10	200x255x170
	QML 1 FT 1,5	1,5	9 - 12	200x255x170

Construction

Control panel for 1 pump with single-phase motor, direct starting for pressure booster sets, with a patented working time-measuring system that stops the pump in case of lack of air cushion in the pressure vessel. Arranged for the capacitor internal connection (for pumps without built-in capacitor) and for the SRL 3 level control card application against dry running. Pump operation controlled by an electronic board type MP 1000 with microprocessor which allows three different modes of operation of the pump: standard, emergency and timed.

Technical data

- Mains single-phase 230V ±10% 50 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 55.

Components

- Thermoplastic case. - Door lock master switch.
 - Fuses for power line. - Fuses for auxiliary circuit.
 - Starting contactor.
 - Thermal relay.
 - Electronic board type MP 1000 with microprocessor.
 - Terminals for pressure switch connection.
 - Terminals for float switch connection against dry-running.
 - Cable glands.
- The panel is suitable for remote control of all the signals of the box (excluding pump stop led and push buttons).

ON REQUEST:

- SRL 3 level control for probes against dry running
- Volt free contact module MSP 1M.
- RA 100 control panel for remote alarm.

T COMP Control panel for 1 submersible pump with three-phase motor

LVBT

Code	Type	Protector A	Motor 230V - 3~	Motor 400V - 3~	Dimensions HxBxP mm

14013490000	T COMP 20	14 ÷ 20	3,7 - 4	7,5	230x180x155

Construction

Control panel and protection for 1 submersible pump with three-phase motor.

Arranged for the LVBT level control internal connection against dry running (T COMP8 model has the level control as a standard).

Control pumps with pressure switch and float-type switch.

Technical data

- Mains 230V or 400V ±10% 50 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 44.

Components

- Enclosure in thermoplastic material
- ON-OFF control switch
- Fuse holder - Contactor - Thermal relay
- Fuses for change of voltage: 230 V or 400 V - Transformer
- Terminals for pressure switch or float switch connection
- Terminals for LVBT board (for T COMP 10,12,16,20 models)
- Green LED indicator: voltage ON
- Red LED indicator: thermic block
- Cable glands

ON REQUEST:

LVBT board for level control (for T COMP 10,12,16,20 models)

Control panels

PFC-T 16	1 - 16	5,5	5,5	255x200x135	1,7

Construction

Control panel for controlling 1 submersible pump with three-phase motor. Electronic control of the operation and dry-running protection through the power factor (PF) control.

The installation of level probes into the well is not required.

It stops the pump in case of lack of air cushion in the pressure vessel (patented system)

Displayed operating data and alarms, available in four languages.

Technical data

- Mains three-phase 380-400V - 3 ~ ±10% 50-60 Hz
- Output current: 8 A - 11 A - 16 A
- Ambient temperature from -5 °C to +40 °C.
- Relative humidity: from 20% to 90% without condensation
- IP 55 protection
- Control through pressure switch (pressure booster set)
- Control through float switch (for filling a tank)
- Alarm output signal
- Constructed in accordance with: IEC/EN 60439-1.

Setting

- Min – Max voltage range
- Motor rated current
- Power factor (PF) value for dry-running protection
- Up to four programmable restarts in case of no water condition

Alarms (with pump stop)

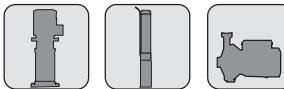

- Phase failure - Wrong phase sequence
- Undervoltage and overvoltage
- Motor overload
- No water
- No air cushion in the pressure vessel

Components

- Enclosure in thermoplastic material.
- Terminal board.
- Display : 2x16 characters. - 6 button key board.
- In/Out Cable glands.

On request: - RA 100 control panel for remote alarm.

	QTL 1 D 11 FT	11		20 - 25	400x300x160

Construction

Control panel for 1 pump with three-phase motor, direct starting for pressure booster sets, with a patented working time-measuring system that stops the pump in case of lack of air cushion in the pressure vessel.

Pump operation controlled by an electronic card type MP 1000 with microprocessor which allows three different modes of operation of the pump: standard, emergency and timed.

Dry-running protection with float switch.

Arranged for SRL 3 level control application for probes connection against dry-running.

Components

- Thermoplastic case (metallic for 7,5-9,2-11kW).
- Door lock master switch.
- Fuses for power line. - Fuses for auxiliary circuit.
- Starting contactor. - Thermal relay.
- Electronic board type MP 1000 with microprocessor.
- Terminals for pressure switch connection.
- Terminals for float switch connection against dry-running.
- Terminals for remote signals
- Cable glands.

Technical data

- Mains 400V 3 ~ ±10% 50 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 55.

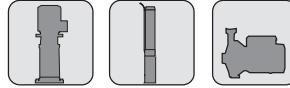

ON REQUEST:

- SRL 3 level control for probes against dry running
- Volt free contact module MSP 1M.
- RA 100 control panel for remote alarm.

Construction

Electromechanical control panel for 1 pump with three-phase motor, direct starting.

Operating signals by E 1000 led card.

Dry-running protection with float switch.

Construction with SRLE level control for probes connection against dry-running on request .

Components

- Metal case. - Door lock master switch.
- Power circuit fuses. - Fuses for auxiliary circuit.
- Starting contactor. - Thermal relay
- Transformer. - E 1000 led card.
- Terminals for connection pump operating signal.
- Terminals for float switch connection against dry-running.
- Cable glands.

Technical data

- Mains 400V 3 ~ ±10% 50 Hz (other voltages on request).

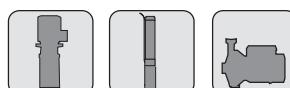

- Ambient temperature from -5 °C to +40 °C.

- Protection IP 55.

ON REQUEST:

- RLE level control for probes against dry running
- RLE level control for pump operating probes.
- Voltmeter. - Ammeter.

	QTL 1 SS 132 E	132	245	1200x800x400

Construction

Control panel for 1 pump with three-phase motor, start/stop with soft starter. Operating signals on E 1000 led board.

Application: control of submersible motor with great cable length and surface motors.

Dry-running protection with float switch.

Construction with SRLE level control for probes connection against dry-running on request .

Components

- Metal case. - Door lock master switch.
- Fuses for power line. - Fuses for auxiliary circuit.
- Soft starter - Transformer.
- By pass contactors (built into the soft starter) - E 1000 led board.
- Terminals for float switch or level probes connection for pump operating.
- Terminals for float switch or level probes connection against dry-running.
- Cable glands.

Technical data

- Mains 400V 3 ~ ±10% 50 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 55.

ON REQUEST:

- RLE level control for connection level probes of pump operating.
- RLE level control for probes against dry running.
- Voltmeter. - Ammeter.

	QTL 4 D 5,5 FT	5,5	9 - 12	600x400x200

Construction

Control panel for 4 pumps with three-phase motor, direct starting, for pressure booster sets, with a patented working time-measuring system that stops the pump in case of lack of air cushion in the pressure vessel.

Arranged for SRL 3 level control application for probes connection against dry-running.

Pump operation cascade mode controlled by an electronic board type MP 6000 with microprocessor alternating the starting order and allows three different operation modes: standard, emergency and timed.

Technical data

- Mains 400V 3 ~ ±10% 50 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 55.

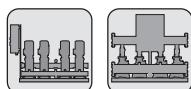

Components

- Metal case. - Door lock master switch.
- Fuses for power line. - Fuses for auxiliary circuit.
- Starting contactors.
- Thermal relay. - Transformer.
- Electronic board type MPS 6000 with microprocessor.
- Terminals for pressure transducer connection.
- Terminals for float switch connection against dry-running.
- Terminals for remote signals
- Cable glands.

ON REQUEST:

- SRL 3 level control for probes against dry running
- Volt free contact module MSP 1M.
- RA 100 control panel for remote alarm.

QTL 4 ST FT Control panel for 4 pumps with three-phase motor, Y/Δ starting

5,5 ÷ 45 kW

Construction

Single-phase mains supply control panel with frequency converter for 1 pump with three-phase variable speed motor, for constant pressure booster sets.
Arranged for SRL 3 level control application for probes connection against dry-running.
Pump operation controlled by an electronic board type MPS 4000 with microprocessor.

Technical data

- Mains single-phase 230V ±10% 50 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 44.

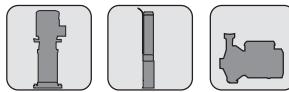

Components

- Metal case. - Door lock master switch.
- Fuses for power line. - Fuses for auxiliary circuit.
- EMC filter. - Frequency converter. - MPS 4000 electronic card.
- Interface for MPS 4000 electronic board.
- Ventilator for electric panel cooling.
- Terminals board. - Terminals for remote signals
- Cable glands.

ON REQUEST:

- SRL 3 level control for probes against dry running
- Volt free contact module MSP 1M, MPS 9M.
- RA 100 control panel for remote alarm.

Construction

Control panel with frequency converter for 4 pumps with variable speed three-phase motor, for constant pressure booster sets.

Arranged for SRL 3 level control application for probes connection against dry-running.

Pump operation controlled by an electronic board type MPS 4000 with microprocessor alternating the starting order at each start.

Technical data

- Mains 400V ±10% 50/60 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 44.

Components

- Metal case. - Door lock master switch.
- Fuses for power line. - Fuses for auxiliary circuit.
- EMC filter. - Frequency converter (1 for each pump).
- MPS 4000 electronic board.
- Interface for MPS 4000 electronic board.
- Ventilator for electric panel cooling.
- Terminals board. - Terminals for remote signals - Cable glands.

ON REQUEST:

- SRL 3 level control for probes against dry running
- Volt free contact module MSP 1M, MPS 13M.
- RA 100 control panel for remote alarm.

Control panels

Construction

Control panel with frequency converter for 4 pumps with three-phase motor: one with variable speed motor (with frequency converter) and 3 with fixed speed motor, for constant pressure booster sets.

Arranged for SRL 3 level control application for probes connection against dry-running.

Pump operation controlled by an electronic board type MPS 4000 with microprocessor alternating the starting order at each start.

Components

- Metal case. - Door lock master switch. - Fuses for power line.
- Fuses for auxiliary circuit. - EMC filter. - Frequency converter.
- Starting contactors of the second, third and fourth pump.
- Timer (Y/Δ) from 7,5 kW. - Transformer. - MPS 4000 electronic board.
- Interface for MPS 4000 electronic board.
- Ventilator for electric panel cooling.
- Terminals board. - Terminals for remote signals - Cable glands.

Technical data

- Mains 400V ±10% 50/60 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 44.

ON REQUEST:

- SRL 3 level control for probes against dry running
- Volt free contact module MSP 1M, MPS 13M.
- RA 100 control panel for remote alarm.

QTL 2 VFDE Control panel for 2 variable speed pumps with on-board frequency converter

Code	Type	Motor 400V - 3~	Max current output max A	Dimensions HxBxP mm
		kW		
---	QTL 2 VFDE 3	0,75 ÷ 3	5	400x300x200

	QTL 2 VFDE 7,5	7,5	15	400x300x200

Construction

Control panel for 2 variable speed pumps MXVE model with on board frequency converter, for constant pressure booster sets.

Arranged for SRL 3 level control application for probes connection against dry-running.

Pump operation controlled by an electronic board type MPS 4000 with microprocessor alternating the starting order at each start.

Components

- Metal case. - Door lock master switch.
- Fuses for power line. - Fuses for auxiliary circuit.
- MPS 4000 electronic board.
- Interface for MPS 4000 electronic board.
- Terminals board.
- Terminals for remote signals
- Cable glands.

ON REQUEST:

- SRL 3 level control for probes against dry running
- Volt free contact module MSP 1M, MPS 13M.
- RA 100 control panel for remote alarm.

Technical data

- Mains 400V ±10% 50/60 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 44.

Control panels

QTL 1.1 VFDE Control panel for 1 **variable speed** (on-board frequency converter) pump and 1 fixed speed pump

QMLD 1 D Control panel for 1 submersible drainage pump with single-phase motor, direct starting

Code	Type	Motor 230V - 1~ kW	Setting A	Capacitor 450Vc	Dimensions HxBxP mm
---	QMLD 1D 12A-FA	0,25 ÷ 1,1	1 ÷ 12 A	-	200x255x135
	QMLD 1D 12A-FA-20	0,25 ÷ 1,1	1 ÷ 12 A	20 µF	200x255x135
	QMLD 1D 12A-FA-25	0,25 ÷ 1,1	1 ÷ 12 A	25 µF	200x255x135

Construction

Control panel with protection for 1 submersible drainage pump with single-phase motor, with a 12A max. nominal current.

Possibility to install one capacitor inside the control panel, for pumps without capacitor inside the motor.

Operation managed by a DR 1000 type electronic board with microprocessor that has the following functions:

- automatic operating test of the pump every 48 hours of inactivity (with pump in the automatic operating mode).
- Pump control with signals coming from:
 - **2 float switches**: one for starting-up and stopping pump, one for the alarm maximum level (optional).
 - **3 float switches**: one for starting-up pump, one for stopping the pump and one for the alarm maximum level (optional).

Technical data

- Mains: 230V 1~ ±10% 50/60 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 55.

Components

- Thermoplastic case.
- Line selector switch with door-locking device.
- Power line fuses.
- Auxiliary circuit fuses.
- Starting-up relay.
- Amperometric transformer.
- Capacitor (on request).
- DR 1000 type electronic board with microprocessor.
- Terminals for capacitor connection.
- Terminals for float switches connection.
- Terminals for connection of remote alarm control panel RA 100E, RA 100A type.
- Cable glands.

The panel is suitable for remote control of all the signals of the box.

ON REQUEST:

- Volt free contact module MSP 1M - MSP 9M.
- RA 100 - RA 100A control panel for remote alarm.

QTLD 1 D Control panel for 1 submersible drainage pump with three-phase motor, direct starting

Construction

Control panel with protection for 1 submersible drainage pump with three-phase motor, Y/Δ starting.

Operation managed by the DR1000 electronic circuit board that has the following functions:

- automatic operating test of the pump every 24 hours of inactivity (with pump in the automatic operating mode).
- Pump control with signals coming from:
 - **2 float switches:** for starting-up and stopping pump, for the alarm (maximum level is optional).
 - **3 float switches:** for starting-up pump, for stopping the pump and for the alarm (maximum level is optional).

Technical data

- Mains 400V 3 ~ ±10% 50 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 55.

Components

- Metal case. - Line selector switch with door-locking device.
- Power line fuses. - Auxiliary circuit fuses. - Contactors.
- Y/Δ timer. - Thermal relay. - Level regulator.
- DR 1000 type circuit board with microprocessor.
- Connection terminals for float switches or level probes.
- Connection terminals for thermal protectors.
- Connection terminals for water seepages probe.
- Connection terminals for the RA 100 RA 100A type remote alarm control panel or volt free contact module.
- Cable glands.

ON REQUEST:

- Volt free contact module MSP 1M - MSP 9M.
- RA 100 - RA 100A control panel for remote alarm.
- Voltmeter. - Ammeter.

Control panels

QMLD 2 D Control panel for 2 submersible drainage pumps with single-phase motor, direct starting

Construction

Control panel with protection for 2 submersible drainage pumps with single-phase motor, with a 12A max. nominal current.

Possibility to install two capacitors inside the control panel, for pump without capacitor inside the motor.

Operation managed by the DR 2000 electronic board that has the following functions:

- pump changing at every pump start.
- working pumps changing after 30 minutes of uninterrupted operation.
- automatic operating test of each individual pump every 48 hours of inactivity (with pumps in the automatic functioning mode).
- Pump control with signals coming from:
 - **3 float switches:** for starting-up and stopping pump 1, for starting-up and stopping pump 2, for the alarms (maximum level is optional).
 - **4 float switches:** for starting-up pump 1, for starting up pump 2, for stopping the pumps and for the alarms (maximum level is optional).

Technical data

- Mains: 230V 1~ ±10% 50/60 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C.
- Protection IP 55.

Components

- Box in thermoplastic material.
- Line selector switch with door-locking device.
- Power line fuses.
- Auxiliary circuit fuses.
- Starting-up relays.
- Amperometric transformers.
- Capacitors (on request).
- DR 2000 electronic board with microprocessor.
- Terminals for capacitors connection.
- Terminals for float switches connection.
- Terminals for connection the RA 100E, RA 100A type remote alarm control panel or volt free contact module.
- Cable glands.

The panel is suitable for remote control of all the signals of the box.

ON REQUEST:

- Volt free contact module MSP 1M - MSP 9M.
- RA 100 - RA 100A control panel for remote alarm.

QTLD 2 D Control panel for 2 submersible drainage pumps with three-phase motor, direct starting

Code	Type	Motor 230V - 1~ kW	Setting A	Dimensions HxWxP mm

Construction

Control panel with protection for 2 submersible drainage pumps with three-phase motors, with a 12A max. nominal current.

Operation managed by the DR 2000 electronic card that incorporates the following functions:

- changes pumps at every pump start.
- changes working pumps after 30 minutes of uninterrupted operation.
- automatic functioning test of each individual pump every 48 hours of inactivity (with pumps in the automatic functioning mode).
- Pump control with signals coming from:
 - **3 float switches:** for starting-up and stopping pump 1, for starting-up and stopping pump 2, for the alarms (maximum level is optional).
 - **4 float switches:** for starting-up pump 1, for starting up pump 2, for stopping the pumps and for the alarms (maximum level is optional).

Technical data

- Mains 400V 3 ~ ±10% 50 Hz (other voltages on request).
- Ambient temperature from -5 °C to +40 °C. - Protection IP 55.

Components

- Box in thermoplastic material.
- Line selector switch with door-locking device.
- Power line fuses.
- Auxiliary circuit fuses.
- Contactors.
- Amperometric transformers.
- DR 2000 type electronic board with microprocessor.
- Connection terminals for float switches.
- Terminals for connection the RA 100A type remote alarm control panel or volt free contact module.
- Cable glands.

The panel is suitable for remote control of all the signals of the box.

ON REQUEST:

- Volt free contact module MSP 1M - MSP 9M.
- RA 100A control panel for remote alarm.

AUTOMATIC AIR FEEDER

ARIAMAT

type

AR 300E

AR 1000E

AR 2000E

Complete with connections
and 1 m polyethylene pipe

Construction

The automatic air feeder ARIAMAT controls the air cushion in the pressure vessel by replacing the air dissolved in the water at every pump start. This device limits the number of pump starts and stops, allows a better use of the water reserve and improves the overall performance of the automatic pressure system.

Operation

ARIAMAT operation is explained in pictures 1-2-3-4.

At the end of every cycle, ARIAMAT AR 300E, AR 1000E and AR 2000E let in the vessel 300, 1000 and 2000 cm³ of air respectively.

For a good operation of ARIAMAT it is necessary to have enough suction pressure in the pipe whilst the pumps are running.

If the pumps work under positive suction head and water falls to the suction inlet, there will not be enough suction pressure in the suction pipe to allow a correct operation of ARIAMAT; in this case, it is necessary to create an artificial loss in the suction pipe, by closing gradually the gate valve when the pump is running until the water level in the ARIAMAT starts dropping.

When a sufficient suction pressure to grant a safe ARIAMAT operation cannot be achieved, it is recommended to feed the vessel with a compressed air system and level probes.

Description of the supply

The ARIAMAT is normally fitted on our automatic water systems.

The supply of ARIAMAT, as a spare part to be installed by the customer, includes:

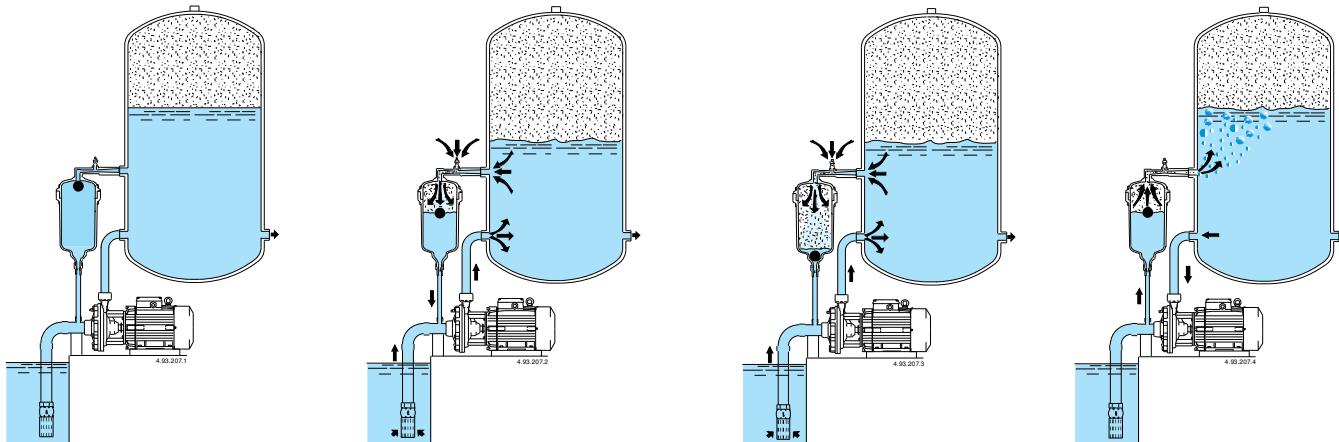

n° 1 ARIAMAT assembled with upper elbow and air valve;

m 1 Polyethylene tube with ring nut and fitting for connection to the pump suction side.

Materials

Component	Material
Upper elbow	Brass
Air valve	Brass
Feeder body	Polycarbonate
Ball valve	Rubber
Conical fittings	Polyethylene
Pipe	Polyethylene

Pressure in m	Pressure vessel capacity in litres											
	100	200	300	400	500	750	1000	1500	2000	3000	4000	5000
14/28	AR 300E						AR 1000E					
20/30	AR 300E						AR 1000E					
30/40	AR 300E			AR 1000E						AR 2000E		
35/55	AR 300E			AR 1000E						AR 2000E		
55/70	AR 300E			AR 1000E						AR 2000E		
75/95	AR 300E	AR 1000E				The use of an air compressor is recommended.						

1) When the pump is stopped, ARIAMAT is full of water.

2) When starting, the pumps creates a suction pressure which also takes the water from ARIAMAT, allowing some more water to come from the vessel. The water through the ARIAMAT venturi sucks air from the upper valve.

3) The water level in the ARIAMAT drops until the ball valve moves to the bottom of the ARIAMAT closing the hole of the pipe connected to the pump. ARIAMAT is now full of water.

4) When stopping, there is a back-flow of water from the vessel through the pump, to the ARIAMAT. Air is pushed inside the vessel.

Technical appendix

How to select a centrifugal pump

The selection of a centrifugal pump should be made according to the actual characteristics and conditions of the plant.

The required data for a correct selection are the following:

Flow Q

Quantity of fluid delivered by the pump in the unit of time, generally expressed in m^3/h .

Total manometric head Hmt

It is considered as the sum between the geometric head existing between the fluid levels and the head loss due to frictions from the fluid passage in the pipework, into the pump and relevant hydraulic accessories.

The expression is the following:

$$Hmt = Hg + \Delta pc \text{ mt fluid column}$$

Hg = geometric head inlet (Hga) + geometric head outlet (Hgp)

Δpc = sum of head loss of the plant calculated from the following data:

- Diameter, length and material of the suction and delivery piping (see table no. 1 page 578).
- Number and type of elbows in the piping and hydraulic accessories such as foot valves, gate valves, non-return valves and strainers etc. (see table no. 2 page 578).
- Type, temperature, viscosity and density of the fluid (if different from that of water)

Pay attention to the manometric suction lift **Hga + Δpc asp**, which should be compared with the suction capability of the pump.

This suction capability or **NPSHr** is defined as net positive suction head and its value is obtained from a curve in accordance with the flow.

For this purpose, once the pump has been selected according to the required flow and head, where possible at the middle of the curve, check the following simplified formula:

$$10 \text{ mt} \pm Hga - \Delta pc \text{ asp.} > NPSH \text{ required} + 0.5 \text{ mt}$$

Hga is the difference in height between the free surface of the water, and its value is negative if the pump is installed above the free water surface.
Δpc asp is the sum of the remaining distributed (piping) and concentrate (valves, bends, etc.) suction head loss

If the final result is negative, it is often possible to adjust flow via a gate valve on the delivery side, in order to restore correct pump operating conditions, without cavitation.

For fluid temperatures higher than the average of about 20°C, the pumps loose their suction capability.

Such changes, referred to pumps with suction capability of 7 meter at normal temperature, are shown on table no. 3 page 579.

CHARACTERISTIC DATA OF THE PUMPS

Once the flow (Q) and total manometric head of the installation (Hmt) are established, the pump absorbed power **N** should be calculated through the following formula:

$$N = \frac{Q \times H \times \gamma}{367 \times \eta_p} \text{ in kW}$$

where:

Q = Flow in m^3/h

H = Head in mt

γ = Fluid density (water = 1 kg/dm³)

η_p = Pump efficiency (Ex. Pump efficiency 68% = $\eta_p = 0.68$)

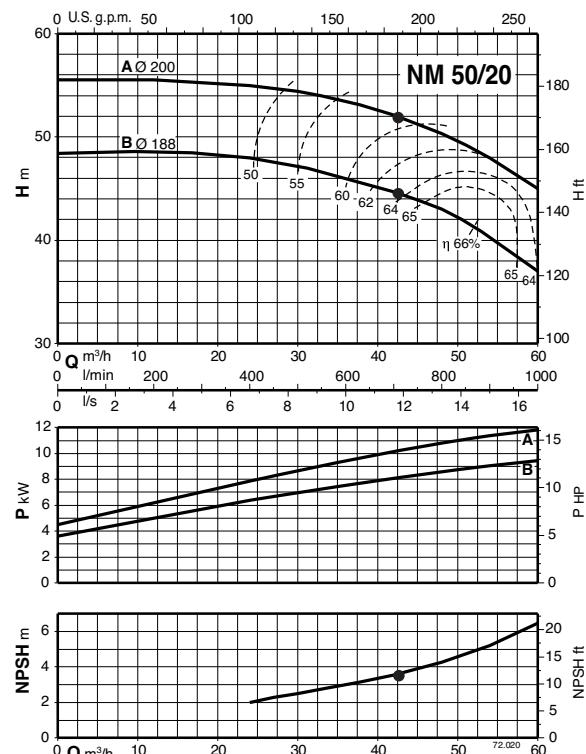

The pumps are normally connected to electric motors, which operate at 2900 rpm with 2-pole motors at 50Hz, or at 1450 rpm with 4-pole motors at 50Hz. However, they can run at any other speed within the limits of design.

Therefore, when changing the number of revolutions, the pump performance will change according to the following rules:

The flow in proportion to the number of revolutions: $Q_2 = Q_1 \times \frac{n_2}{n_1}$

The head, in proportion to the square of the number of revolutions: $H_2 = H_1 \times \left(\frac{n_2}{n_1} \right)^2$

The absorbed power, in proportion to the cube of the number of revolutions: $N_2 = N_1 \times \left(\frac{n_2}{n_1} \right)^3$

How to select a centrifugal pump

Calculation example for the selection of a centrifugal pump

Case A Installation data

- Q (Flow) = 42 m³/h
- Hga (geometric head inlet) = 3,5 m
- Hgp (geometric head outlet) = 39 m
- 5 m DN 100 mm diameter suction pipe complete with 1 elbow and 1 foot valve
- 70 m DN 80 mm diameter delivery pipe with 1 non-return valve, 1 gate valve and 3 sweep elbows

$$Hg = Hgp + Hga = 39 + 3,5 = 42,5 \text{ m Geometric head of the installation}$$

Δpc = total head loss

Suction side:
 5 m Ø100 piping $pc = 0,12 \text{ m}$
 1 Elbows $pc = 0,045 \text{ m}$
 1 Foot valve $pc = 0,46 \text{ m}$

Delivery side:
 70 m Ø 80 pipe $pc = 5,25 \text{ m}$
 1 Non-return valve $pc = 0,5 \text{ m}$
 1 Gate valve $pc = 0,05 \text{ m}$
 3 Elbows $pc = 0,09 \text{ m}$

Total $\Delta pc = 6,5 \text{ m.}$

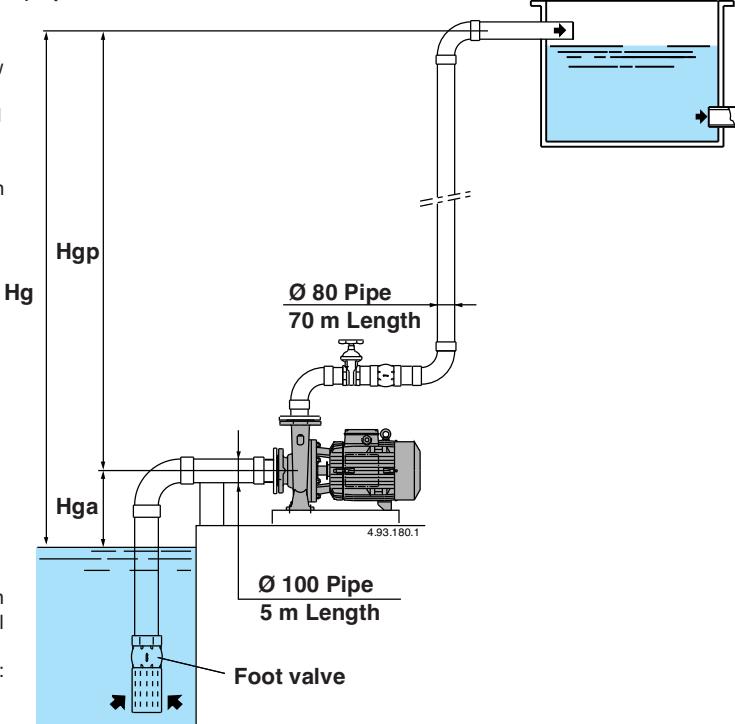

Considering that the calculation has been made for new pipes, an increase of 15/20% is to be applied for ageing etc. Therefore the total head loss Δp amounts to about 8 m.

Therefore, the total manometric head which the pump must achieve is:

$$Hmt = Hg + \Delta p = Hgp + Hga + \Delta pc = 39 + 3,5 + 8 = 50,5 \text{ m total.}$$

The pump type NM 50/20AE can be chosen (see pump diagram)

A) Operation with suction lift

Case B Installation data

- Q (Flow) = 42 m³/h
- Hga (geometric head inlet) = 3,5 m
- Hgp (geometric head outlet) = 39 m
- 5 m DN 100 mm diameter suction pipe complete with 1 gate valve and 1 foot valve
- 70 m DN 80 mm diameter delivery pipe with 1 non-return valve, 1 gate valve and 3 sweep elbows

$$Hg = Hgp - Hga = 39 - 3,5 = 35,5 \text{ m Geometric head of the installation}$$

Δpc = total head loss

Suction side:
 5 m Ø 100 piping $pc = 0,12 \text{ m}$
 1 Non-return valve $pc = 0,5 \text{ m}$
 1 Gate valve $pc = 0,05 \text{ m}$

Delivery side:
 70 m Ø 80 pipe $pc = 5,25 \text{ m}$
 1 Non-return valve $pc = 0,5 \text{ m}$
 1 Gate valve $pc = 0,05 \text{ m}$
 3 Elbows $pc = 0,09 \text{ m}$

Total $\Delta pc = 6,5 \text{ m}$

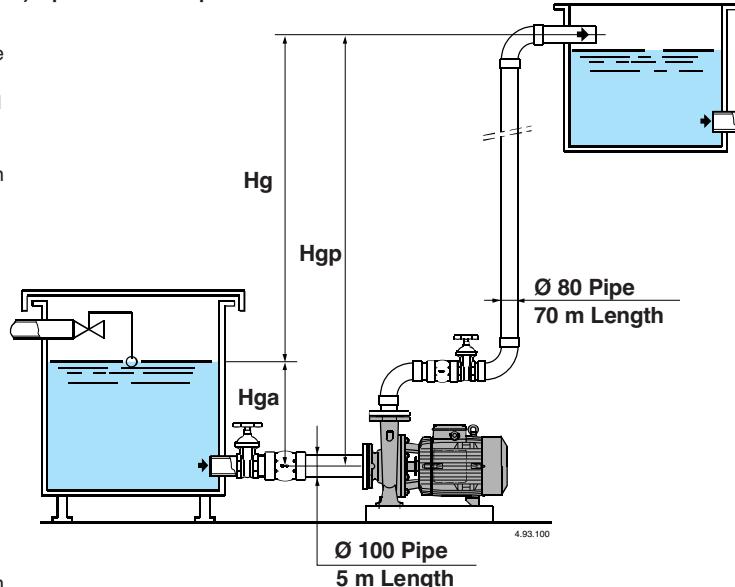

Considering that the calculation has been made for new pipes, an increase of 15/20% is to be applied for ageing etc. Therefore the total head loss Δpc amounts to about 8 m.

Therefore, the total manometric head which the pump must achieve is:

$$Hmt = Hg + \Delta p = Hgp - Hga + \Delta pc = 39 - 3,5 + 8 = 43,5 \text{ m total.}$$

The pump type NM 50/20BE can be chosen (see pump diagram)

B) Operation under positive suction head

ACCESSORIES FOR WATER SUPPLY

Foot valve with strainer - Sealing member installed on the lower end of the suction pipe. It prevents the water coming out from the piping and pump at every plant stop. It must be always immersed in the fluid at an installation depth which allows a perfect operation without cavitation.

It is a good rule to also install a float switch to automatically stop the pump when the water goes below a fixed level.

Non-return valve - It must be installed on the pump delivery port to avoid reflux in case of a sudden stop of the plant. It is recommended using a type fitted with an inner return spring and with ogive shutter, as this will help to diminish water hammering.

Gate valve - The installation of a gate valve is very important. In addition to allowing the pump to be disassembled without emptying the plant, it is used to start the plant and to adjust the flow.

PIPING

The piping must be selected in-line with the water velocity which is recommended to be 1.5 meter per second on the suction side and 3 meter per second on the delivery side. The calculation of the suction piping must be carefully checked so as to avoid the maximum head loss and allow the pumps maximum suction capability. The piping must be perfectly tight and have no counterslopes towards the pump port, so to avoid the development or entrapment of air bubbles or pockets.

All the piping must be secured to rests, so that they will not weigh on the pump ports.

Problems at the pump

Faults	Possible causes
Jammed pump	This may happen after periods of inactivity due to inner oxidation. To release smaller sized monobloc electropumps use a screwdriver at the notch on the back part of the shaft. For the larger sizes, turn on the shaft or the flexible coupling
Pumps which do not prime	Pump and/or suction pipe with air entrapped. Incomplete priming or totally unprimed. Possible air entering from taps, drain or fill plugs, joints or stuffing box Foot valve not fully immersed in the fluid or obstructed by deposits. Suction lift too high compared with the capability of the pump. Wrong direction of rotation Wrong number of revolutions
Insufficient flow	Piping and accessories of too small a diameter which cause too high head loss. Jammed impeller with presence of debris in the vanes. Corroded or broken impeller Impeller wear rings and/or pump casing worn by abrasion. Gas presence in the water, or too high fluid viscosity in case of fluids different from water.
Noise and vibrations in the pump	Unbalanced rotary part or worn ball bearings. Pump and piping not properly secured. Too low flow rate for the selected pump Operation with cavitation
Overloaded motor	Pump characteristics higher than those of the plant Fixed and rotary parts in contact tending to seize owing to a lack of lubrication Too high rotation speed Wrong mains supply Poor unit alignment Fluid with too high density than the design

Choosing a pressure-boosting plant

Required quantity of water

The public water-supply system is normally capable of supplying water at an adequate pressure and capacity level to the various outlets connected to it. In those cases where a water-supply system is non-existent or insufficient for correct operation of the various facilities, a pressure-boosting system has to be installed to ensure an acceptable level of pressure and capacity also at the outlets in the most unfavourable positions. The size of the water-supply unit is determined according to the quantity of water and pressure required.

Residential buildings

The main data needed for calculation of the quantity of water required is given in the following list:

- the number of outlets
- consumption per each type of outlet (Tab.1)
- the contemporaneity factor (Fc)

Table 1: Maximum consumption at points of demand

Outlet	Qu. delivered (l/min)
Sink	10
Wash-basin	10
Bath/whirlpool tub	18
Shower	12
WC - flush-tank type	7
WC - fast-feed type	90
Bidet	6
Washing machine	12
Kitchen sink	12
Dishwasher	8
Outlet w/ 1/2" tap	20
Outlet w/ 3/4" tap	25

The maximum theoretical requirement is given by the sum of the quantities of water delivered to the various outlets of an apartment multiplied by the number of apartments. In practice, it is generally found that only some of the outlets are used simultaneously.

The contemporaneity factor (Fc) allows for definition of the real maximum delivery that may be required by the outlets.

The following formulae are used to calculate the Fc factor. The value "Ut" is the total number of outlets (the number of outlets in an apartment multiplied by the number of apartments).

$$\text{Apartments with 1 toilet - flush-type tank: } Fc = \frac{1}{\sqrt{0,85 \times Ut}}$$

$$\text{Apartments with 1 toilet - fast-feed type: } Fc = \frac{1}{\sqrt{0,7 \times Ut}}$$

$$\text{Apartments with 2 toilets - flush-type tank: } Fc = \frac{1}{\sqrt{1,1 \times Ut}}$$

$$\text{Apartments with 2 toilets - fast-feed type: } Fc = \frac{1}{\sqrt{0,83 \times Ut}}$$

Diagram A gives the values of actual delivery, which depend on the number of apartments connected to the water-supply system. Seven outlets are hypothesized for one-bathroom apartments and ten outlets for two-bathroom apartments.

Non-residential buildings

For calculation of quantities of water required, the following types of building are considered:

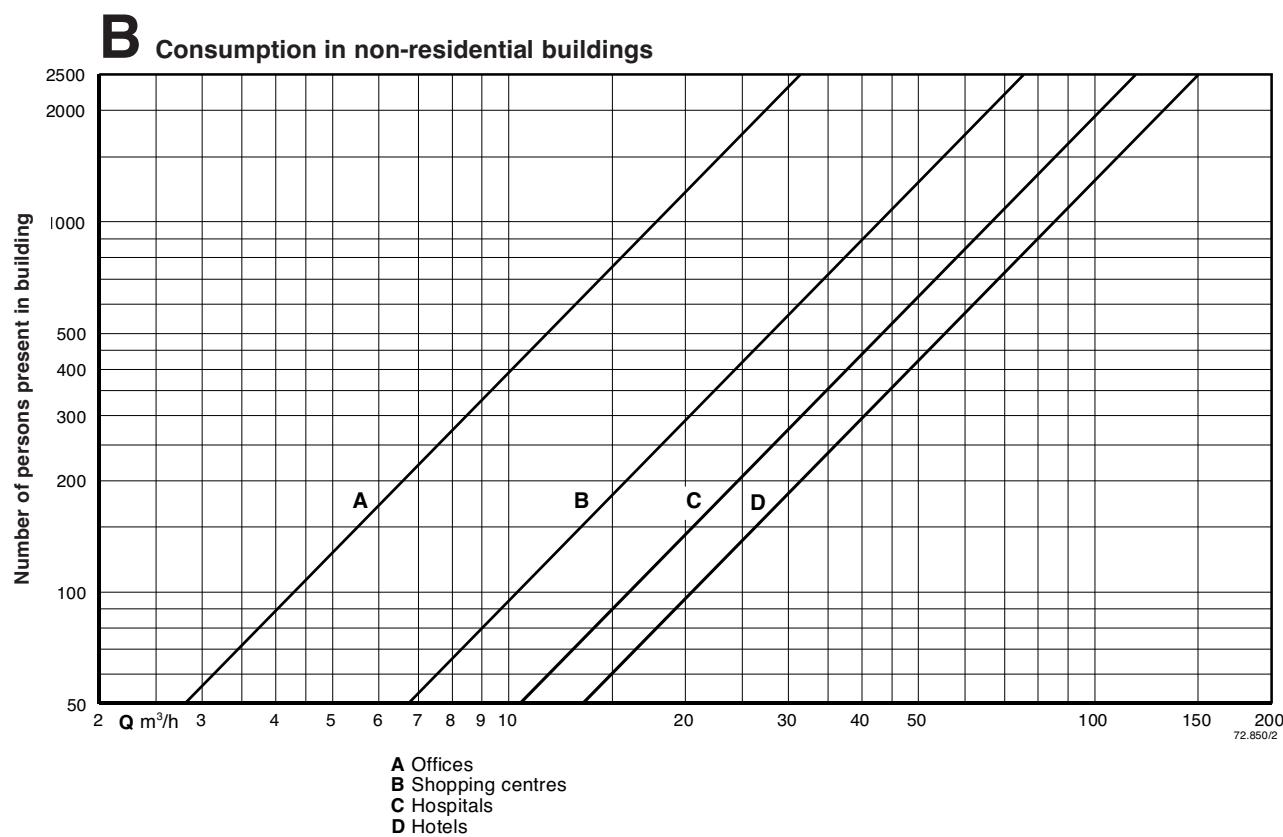

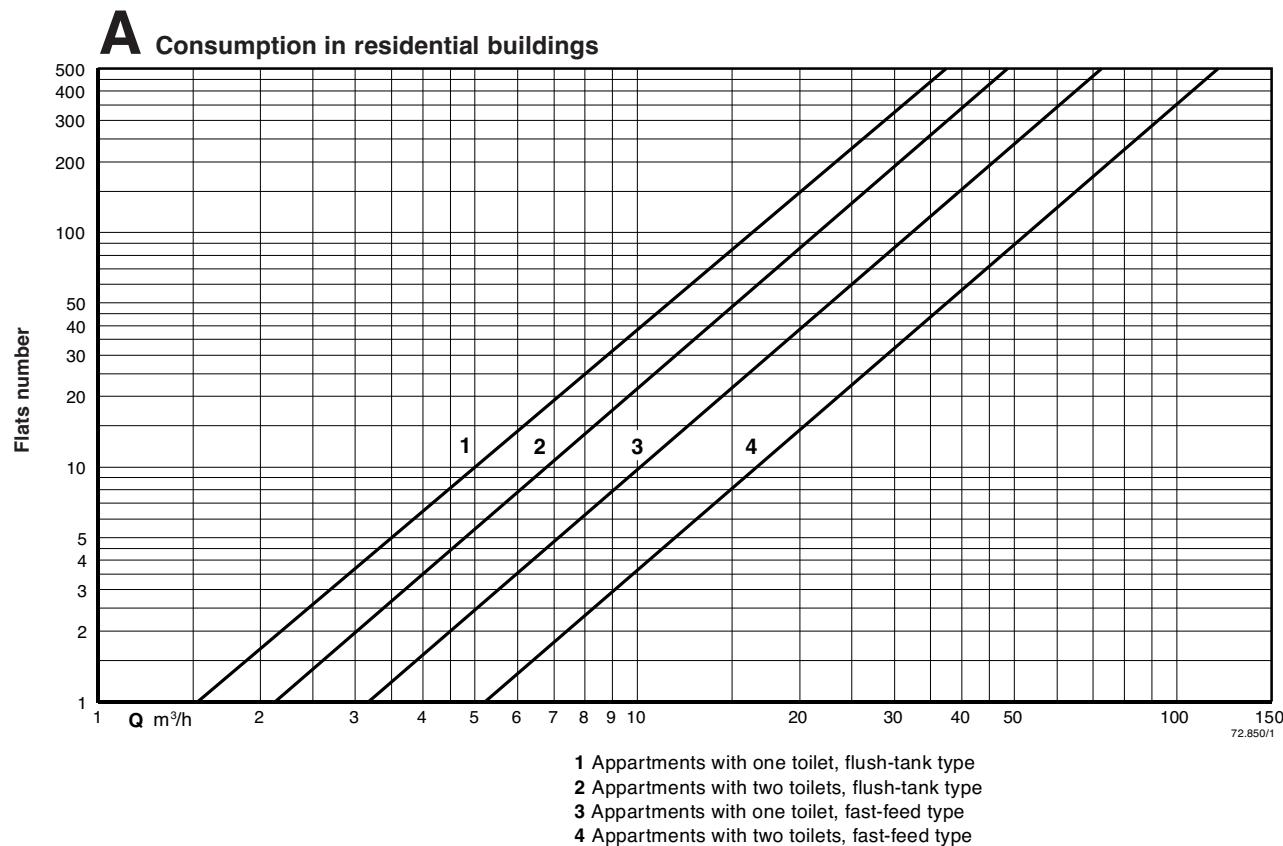

- offices
- shopping centres
- hospitals
- hotels

These buildings require quantities of water greater than those needed in residential buildings.

Diagram B shows the values of actual delivery for the main types of building. The values are based on hypothetical numbers of persons present in these buildings.

These values offer a guideline and may vary in accordance with particular requirements of projects.

Choosing a pressure-boosting plant

Choosing a pressure-boosting plant

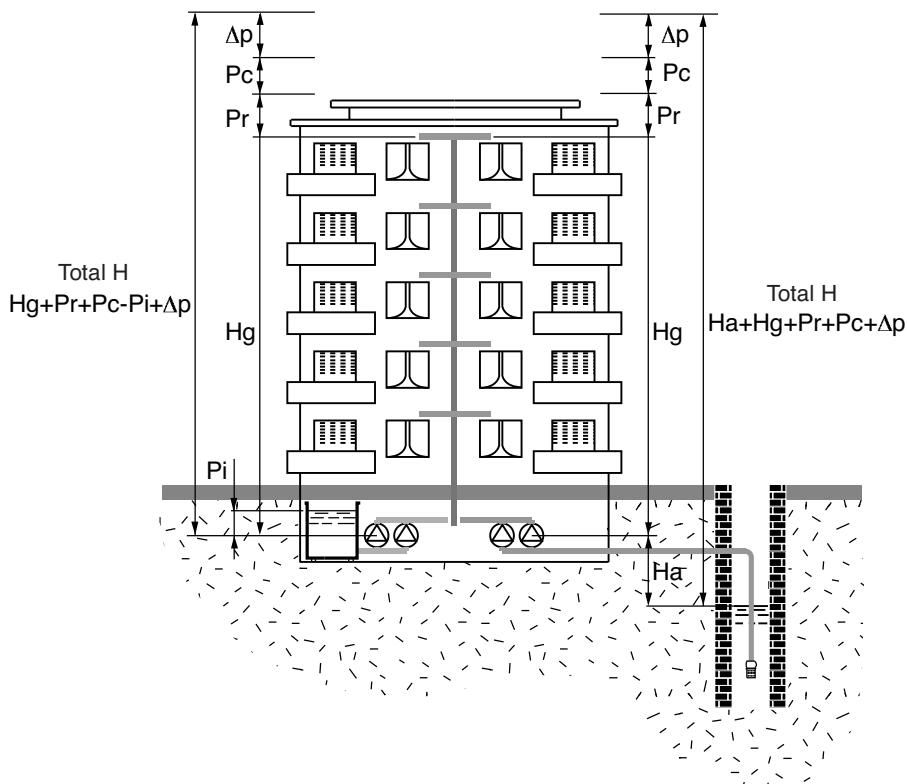

Delivery head

The outlet pressure required for proper operation of electrical appliances must not be lower than 1.5 bar and not greater than 4-5 bar.

When the pressure level is insufficient and to such a degree that it impedes operation of domestic appliances, a pressure-boosting system must be installed to ensure adequate pressure also at the more unfavourably-located points of demand.

The values to consider for calculation of the pressure level are the following:

- **Hg** the geodetic head between the pressure-boosting unit and the highest outlet.
- **Ha** the suction lift.
- **Pi** the initial pressure (or positive suction head).
- **Pr** the minimum residual pressure at the highest outlet (normally 1.5 bar).
- **Pc** the system head loss.
- **Δp** the difference in pressure between starting and stopping pumps.

When the pumps draw water from a well, the dynamic height difference (Ha), when pumps are operating, should not exceed 4 m. A greater suction head or erroneous sizing of the suction pipe may cause improper operation of the pumps - e.g. cavitation and priming loss. The pumps are installed with a positive suction head when they are connected to a raised tank or a pressurized primary collection tank.

The pumps therefore have an initial pressure at the suction port which can vary from 0.1 bar (suction with a collection tank) to 2-3 bar (with suction from a pressurized primary collection tank).

When choosing a pressure-boosting system, the positive value of the initial pressure (Pi) must be considered as a value to be subtracted from the height (Hg).

The system head loss (Pc) are given by the sum of the losses of the pipes (including the suction pipe) added to the losses due to gate valves, non-return valves, water purifiers, counters, filters, elbows etc.

Head loss in the tubes, caused by the friction of the water against the inner surface of the pipelines, may be quantified as 0.5 m per floor in the case of new systems and 1 m per floor in the case of old systems.

To avoid pressure levels greater than 4-5 bar arriving at outlets on the lower floors of apartment blocks and other buildings with a height greater than 30 m (about 10 floors), pressure reducers must be installed at the offtake point of the lower floors or otherwise two pressure-boosting units can be installed: one for the lower floors and one for the upper floors.

How to select a Pressure Boosting Sets

Surge tanks

The purpose of surge tanks is to retain a quantity of water, under pressure, thus avoiding continuous pump starts, as water is demanded. The selection of the vessel must be made in-line with the pump flow and pressure and number of starts allowed by the motor. For water pressure units with more than one pump, the selection of the vessel should refer to the data for one pump only.

The surge vessel may be of the following type:

- a) Air cushion vessels
- b) Membrane vessels

Air cushion vessels

In this type of vessels the air and water are in contact with each other. This will therefore result in a decrease of air as it dissolves into the water. The installation will therefore require an automatic air feed ("Ariamat" air feeder, compressor or auto valve connected to existing compressed air network).

Air cushion vessels are normally manufactured from hot galvanized sheet steel, with rated pressures from 6 to 12 bar and capacity from 100 to 5000 ltrs, complete with safety valves, pressure gauge and level indicator.

Membrane vessels

These vessels are fitted with an inner membrane separating the water and air. When installed, they must be pre-charged at a pressure in-line with the pressure switch settings.

Calculation to size an air cushion vessel.

$$V_t = \frac{1.25 \times Q_m \times (P_1 + 10)}{4 \times Z \times (P_1 - P_2)}$$

where:

V_t = Total volume of air cushion vessel in m³

Q_m = Average pump flow in m³

P₁ = Maximum set pressure of pressure switch

P₂ = Minimum set pressure of pressure switch

Z = Maximum number of starts/hour allowed by the motor (see table).

Q_m flow is the average between the flow at starting pressure (Q min) and the flow at stop pressure (Q max):

$$Q_m = \frac{Q_{min} + Q_{max}}{2} \text{ (m}^3/\text{h)}$$

Exemple: Pump MXV 40-807

P₁ = 70 m

P₂ = 50 m

Q_m = 9,45 m³/h

Z = 23 starts/hour

$$V_t = \frac{1.25 \times 9,45 \times (70 + 10)}{4 \times 23 \times (70 - 50)} = 0,514 \text{ m}^3$$

From the calculation, it would result in the selection of a 500 litre vessel.

Calculation to size a membrane vessel

$$V_t = \frac{Q_m}{4 \times Z} \times \frac{1}{1 - \frac{(P_2 - 2)}{P_1}}$$

where:

V_t = Total volume of air cushion vessel in m³

Q_m = Average pump flow in m³

P₁ = Maximum set pressure of pressure switch

P₂ = Minimum set pressure of pressure switch

Z = Maximum number of starts/hour allowed by the motor (see table)

Exemple: Pump MXV 40-807

P₁ = 70 m

P₂ = 50 m

Q_m = 9,45 m³/h

Z = 23 starts/hour

$$V_t = \frac{9,45}{4 \times 23} \times \frac{1}{1 - \frac{(50 - 2)}{70}} = 0,327 \text{ m}^3$$

From the calculation it will result in the selection of a 300 litre membrane vessel.

CE 97/23 PED APPROVED PRESSURE VESSELS (Air tanks)

EFFICIENCY OF ELECTRIC MOTORS

Directive of the European Parliament COMMISSION REGULATION (EC) No 640/2009

Having regard to Directive 2005/32/EC of the European Parliament establishing a framework for the setting of ecodesign requirements for energy-related products, it specifies the time and the efficiency levels that motors sold in the European market will have to comply.

This Regulation shall apply to:

electric single speed motor, three-phase 50 Hz or 50/60 Hz, squirrel cage induction motor that:

- has 2 to 6 poles,
- has a rated voltage of U N up to 1 000 V,
- has a rated output P N between 0,75 kW and 375 kW,
- is rated on the basis of continuous duty operation.

This Regulation shall not apply to:

- a) motors designed to operate wholly immersed in a liquid;
- b) motors completely integrated into a product (for example gear, pump, fan or compressor) of which the energy performance cannot be tested independently from the product;
- c) motors specifically designed to operate:
 - at altitudes exceeding 1000 metres above sea-level;
 - where ambient air temperatures exceed 40 °C;
 - in maximum operating temperature above 400 °C;
 - where ambient air temperatures are less than -15 °C for any motor or less than 0 °C for a motor with air cooling;
 - where the water coolant temperature at the inlet to a product is less than 5 °C or exceeding 25 °C;
 - in potentially explosive atmospheres as defined in Directive 94/9/EC of the European Parliament and of the Council.
- d) brake motors.

Each ecodesign requirement shall apply in accordance with the following timetable:

1) from 16 June 2011:

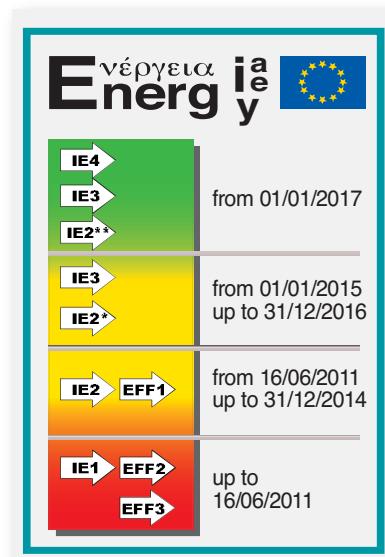

motors shall not be less efficient than the IE2 efficiency level;

2) from 1 January 2015:

motors with a rated output of 7,5-375 kW shall not be less efficient than the IE3 efficiency level or meet the IE2 efficiency level, and be equipped with a variable speed drive.

3) from 1 January 2017:

all motors with a rated output of 0,75-375 kW shall not be less efficient than the IE3 efficiency level or meet the IE2 efficiency, and be equipped with a variable speed drive.

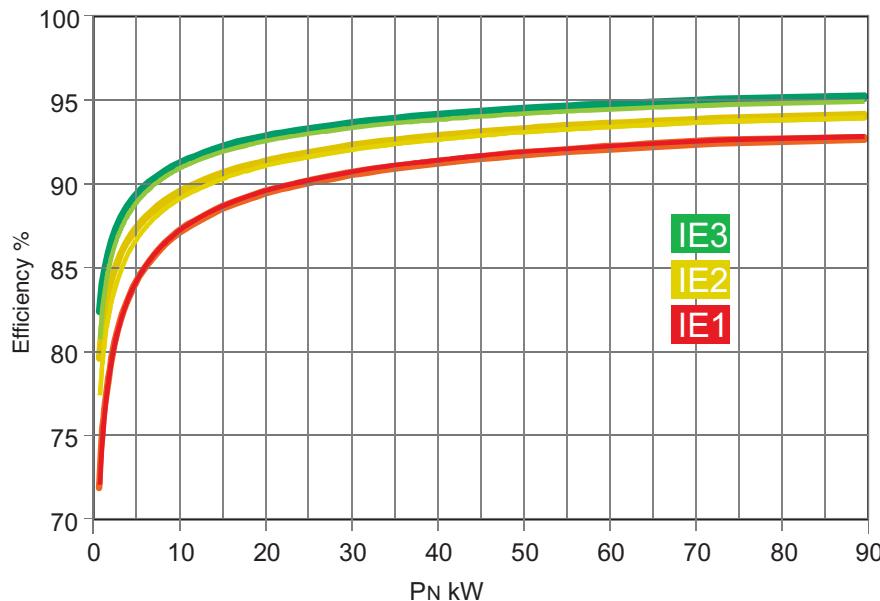

* IE2 up to 7,5 kW from 7,5 up to 375 kW shall be equipped with a variable speed drive

** IE2 from 0,75 up to 375 kW shall be equipped with a variable speed drive

NAMEPLATE

The legislation requires that a nameplate is fitted detailing the following data; the class of motor efficiency (IE1 or IE2 or IE3), the rated power, and the value of the performance with 100% efficiency at full load, 75% load and 50 % load.

Example of CALPEDA nameplate:

the legend describes the parameters and values shown on the nameplate.

DISPOSAL:

This product or parts of it must be disposed of in an environmentally sound way:

1. Use the public or private waste collection service.
2. If this is not possible, contact your local Calpeda representative.

EFFICIENCY OF CIRCULATORS

Directive of the European Parliament COMMISSION REGULATION (EC) No 641/2009

Eco-design Directive of Energy Using Products (**ErP Directive - Energy-related Products**). The European Union wants to improve the design of equipment that "consume" significant energy e.g. (televisions, refrigerators, washing machines, boilers, pumps, and motors etc.) To improve eco-design providing environmental sustainability, reducing negative environmental impact as the consequence of production, use and disposal of products.

The objective of the Directive is to force manufacturers and importers to produce and distribute products with high energy efficiency, and carbon output.

The criteria for eco-design will be an integral part of the declaration of conformity (**CE**), which is a necessary requirement/mark for products being sold in the EU.

This Regulation shall apply to:

Stand-alone* or integrated** circulators with the motor immersed in the pumped medium, with hydraulic power from 1 up to 2500 W, designed for use in heating systems or in secondary circuits of cooling distribution systems.

* Stand alone circulators are commonly available on the market.

** circulators integrated in products are component of a device, such as boilers, heat pumps, etc..

This Regulation shall not apply to:

- drinking water circulators
- circulators integrated in products and placed on the market not later than 1 January 2020 as replacement for identical circulators integrated in products and placed on the market no later than 1 August 2015. The replacement product or its packaging must clearly indicate the product(s) for which it is intended.

This Regulation shall apply in accordance with the following timetable:

- from **1 January 2013**, glandless standalone circulators shall meet the efficiency level (EEI) less than 0.27, with the exception of those specifically designed for primary circuits of thermal solar systems and of heat pumps;
- from **1 August 2015**, glandless standalone circulators and glandless circulators integrated in products shall meet the efficiency level (EEI) less than 0.23.
