RONDISH WIRELESS NURSE CALL SYSTEM

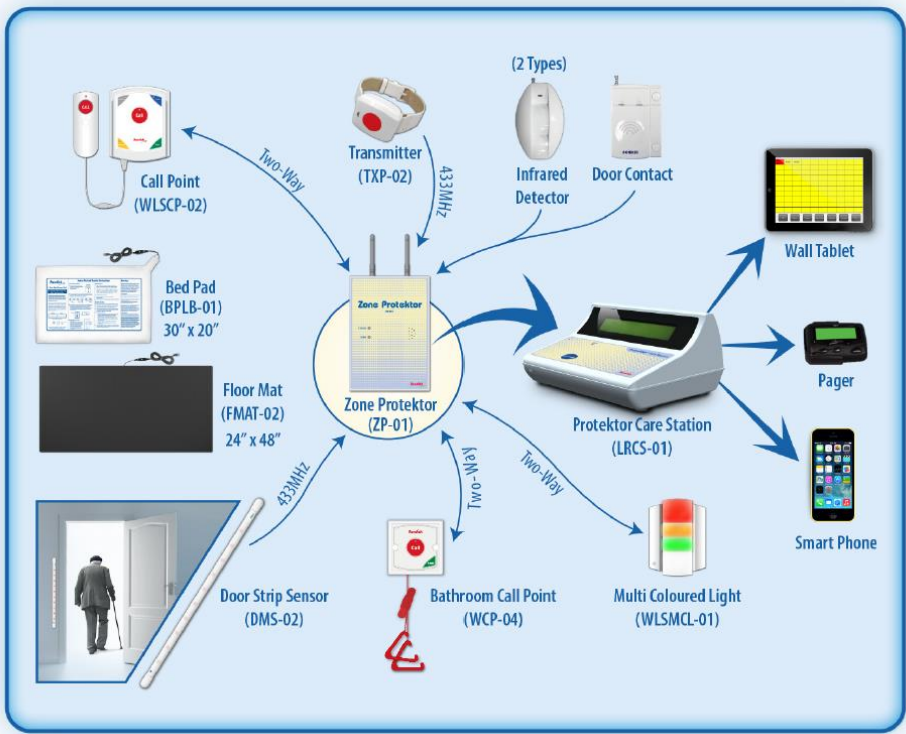

Product Description

Wireless nurse call systems provide more flexibility for expansion over wired systems, and cause less disruption to care routines and residents during installation. Installation costs are considerably less than wired systems with simplified fault finding and cure.

The Rondish Protector system provides a complete resident care solution beyond call pendants. Door egress, falls prevention alarms, and wander detection alarms are all easily added to the system, with comprehensive incident location and incident/call logging.

Care staff are alerted by data radio pager (wherever they are) with detailed reason for the alert and call type (bed alarm, WC, fall sensor, door alarm, crash team, etc.). Rondish protector wireless nurse call solutions. Systems to suit all size care establishments. Designed for performance, reliability, and durability. 100% flexible care planning - 100% CQC satisfaction. Uncomplicated installation - uncomplicated operation

Specification

Technical Specifications

Operating Frequency: 433, 869 MHz
 Operating Range*: 50m local, 500m long-range
 Transmission Power 27dBm
 Power Supply: AC adaptor 12V, 800mA
 Battery pack back-up (6Vdc)
 Dimensions (LxWxD): 24 x 17 x 11cm
 Housing Material: ABS + PC
 Net Weight: 900g
 Operating Temp.: 5°C to 40°C
 Rel. Humidity: < 90%

*Range estimate provided for guidance only, and is subject to site testing; RF is affected by building layout and materials

Approvals

CE Approved & compliant with R&TTE directive
 EMC: EN301489-1 & 3
 Radio: EN300220-1 & 2
 Alarm: EN50130-4
 Safety: EN60950-1
 Medical Device Immunity: EN60601-1-2
