

Flexi Classic

Efficient and easy-to-use safety controller

SICK
Sensor Intelligence.

Technical data overview

Safety level	PL e, SIL 3
Configuration method	Via rotary switch / hard wired (depending on type)
System construction	Modular 1 main module 0 ... 11 expansion modules 0 ... 8 relay modules 0 ... 1 gateways
Fieldbus, industrial network	EtherNet/IP™, Modbus, PROFINET, PROFIBUS DP, CANopen, DeviceNet™ (depending on type)
Safe networking	Global emergency stop
Safe series connection with Flexi Loop	Flexi Loop

Product description

The Flexi Classic modular safety controller enables straightforward configuration without any software. This allows the user to adapt the logic evaluation settings to the requirements of the application concerned. Logic functions are configured through rotary switches. These switches are located directly on the modules, enabling quick and easy commissioning. Communication between the individual modules is achieved via an internal bus, providing users interface information about the diagnostics of the safety system. The product portfolio includes gateways, which have no influence on the adjusted logic and are used for connection to a higher-level, non-safe control. The gateways collect and forward the information of the system, ensuring quick diagnostics. The Flexi Classic also offers the Flexi Classic configurator tool as a configuration aid to provide a wiring diagram for the created project. Special modules for muting complete this product family, which provides efficient solutions for a whole host of applications.

At a glance

- Rotary switch for easy function adjustment
- Modular extension possible
- Direct wiring for all types of sensors
- Logic functions: AND, OR, muting, bypass, reset, EDM
- Integration into all common fieldbuses
- Integration of the Flexi Loop safe series connection
- Special muting modules are able to meet all the requirements of a demanding muting application

Your benefits

- The optimal scalability thanks to the modular construction prevents redundant inputs and outputs as well as reducing hardware
- Configuration via rotary switch simplifies logic configuration
- Flexi Classic configurator tool offers easy logic configuration and wiring help
- Complete diagnostics for the system, preventing unplanned downtime
- The compact design enables significant reduction of the control cabinet width
- Significantly reduced wiring compared with conventional safety solutions. Wiring with Flexi Loop is even easier.

Fields of application

- Machines with simple to medium safety logic
- Safety-relevant applications for a variety of industries, e.g. electronics, robotics, packaging, logistics and automotive

SICK AT A GLANCE

SICK is one of the leading manufacturers of intelligent sensors and sensor solutions for industrial applications. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in a wide range of industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services complete our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is “Sensor Intelligence.”
