UZK24.121, UZO24.121

DIMENSION U-Series

BATTERY MODULE 24V, 12AH

BATTERY MODULE

- 24V, 12Ah Battery Capacity (2x 12V Batteries in Series)
- Small Mounting Footprint
- 2m Power Leads Included
- PT1000 Sensor for Battery Module Temperature Included
- Includes a Centre-tap Terminal with Auto-resettable Fuse
- 3 Year Warranty, Except for Batteries, Which Are Considered a Service Part.

PRODUCT DESCRIPTION

The UZK24.121 battery module utilizes two nonspillable maintenance-free VRLA lead-acid batteries (connected in series), that are assembled in one package with all the required wiring included.

The battery module is available in two different options. It can be ordered as UZK-module with a battery or as UZO-module without a battery which can be installed at a later date to avoid outdated batteries.

The battery module also includes a sensor board, which contains a temperature sensor and a center-tap connection terminal. The use of the sensor board enables to monitor and charge the two batteries individually and precisely, which extends the service life of the batteries and makes the use of matched replacement batteries unnecessary. The use of the sensor board is optional, the DC-UPS will also function without the sensor board installed.

SHORT-FORM DATA

| Nominal voltage Nominal battery capacity | DC 24V 12Ah | | |
|--|----------------|--------------------------------|--|
| Nominal battery life | 3 to 5 years | According EUROBAT | |
| Battery current | Max. 35A | Discharging current | |
| | Max. 3.5A | Charging current | |
| Temperature sensor | PT1000 | | |
| Recommended | 27.8V | At 10°C | |
| charging voltage | 27.5V | At 20°C | |
| | 27.15V | At 30°C | |
| | 26.8V | At 40°C | |
| Self-discharge rate | 3%/month | At 20°C | |
| Battery fuse | 35A | ATOF [®] 287 035 from | |
| | | Littelfuse | |
| Temperature range | -10°C to +40°C | For charging | |
| | -15°C to +50°C | For discharging | |
| Size (WxHxD) | 203x186x124mm | Discharging current | |
| Weight | 9200g / 20.3lb | For UZK24.121 | |
| - | 800g / 1.76lb | For UZO24.121 | |
| | | | |

WARNING Risk of electrical shock, fire, personal injury or death.

- Turn power off before working on the device. Protect against inadvertent re-powering.
- Do not modify or repair the unit.
- Use caution to prevent any foreign objects from entering the housing.
- Do not use in wet locations or in areas where moisture or condensation can be expected.
- Do not touch during power-on, and immediately after power-off. Hot surfaces may cause burns.

UZK24.121, UZO24.121

DIMENSION U-Series

BATTERY MODULE 24V, 12AH

1. INTENDED USE

This device is designed for installation in an enclosure and is intended for commercial use, such as in industrial control, process control, monitoring and measurement equipment or the like. Do not use this device in equipment where malfunction may cause severe personal injury or threaten human life

2. INSTRUCTIONS FOR DISPOSAL OF THE BATTERIES

Always dispose batteries through a recycling organization. Optionally, batteries can be returned to the supplier or the battery manufacturer. Batteries must be completely discharged before recycling.

CAUTION: The unit contains wet cell batteries. Ventilation of the installation room in accordance with the rules of Canadian Electrical Code, part 1 is required if used in Cana

3. INSTRUCTIONS FOR BATTERY STORAGE

Do not store batteries longer than 9 months without charging or performance and lifetime may change. Every 9 months or whenever the open circuit voltage (OCV) falls below 25.2V, the battery module should be charged. Apply a charging voltage of 27.6V (at 25°C) for 72 hours. Batteries with an OCV below 24V should be disposed.

4. INSTALLATION INSTRUCTIONS

This device may only be installed and put into operation by qualified personnel.

Before initial use, check the last charging which is marked on the battery. If it is older than 9 month, replace the battery.

This device does not contain serviceable parts, except the fuse or replacement battery. If malfunction should occur during installation or operation, first check the fuse and battery for proper functionality. If the unit is damaged or if the malfunction continues, immediately turn power off and send device to the factory for inspection.

Do not install the battery fuse until the installation work is complete.

Replacement fuses must be of the same type or an UL listed fuse with the same nominal value and characteristics.

Do not store batteries or battery modules at temperatures higher than 25°C or performance and lifetime may change.

Before initial use, check the last charging which is marked on the battery. If it is older than 9 month, replace the battery.

Do not short-circuit the battery poles or power wires and always check correct battery polarity.

Mount the device onto a flat surface. Do not install the battery module upside down.

Install the device in a cool area inside an enclosure providing protection against electrical, mechanical and fire hazards. Ensure sufficient ventilation by following the requirements of the EN 50272-2.

The device is designed for pollution degree 2 areas in controlled environments. No condensation or frost allowed.

The enclosure of the device provides a degree of protection of IP00.

Do not use batteries other than the original batteries supplied by the manufacturer to avoid conflicts with agency approvals. The maximum surrounding air temperature is +50°C (+122°F). The operational temperature is the same as the ambient or surrounding air temperature and is defined 2cm below the device. Charging is allowed up to +40°C. Frequently charging below +5°C reduces the lifetime of the battery.

UZK24.121, UZO24.121

DIMENSION U-Series

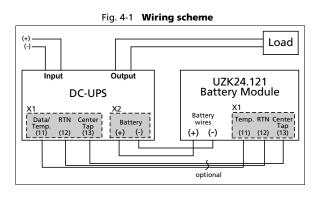

PULS

BATTERY MODULE 24V, 12AH

The device is designed to operate in areas between 5% and 95% relative humidity.

Shorten the length of the (+) and (-) wires as needed between the battery module and the DC-UPS. If separate wires are used, do not use wires smaller than 4mm₂ (AWG 12). Do not use individual wires longer than 2m (7ft) to avoid voltage drops on this connection.

Connect the sensor board to the DC-UPS by using control wires with a minimum wire size of 0.5mm₂ (AWG 20).

5. INSTALLATION INSTRUCTIONS HAZARDOUS LOCATIONS

The device is suitable for use in Class I Division 2 Groups A, B, C, D locations and for use in Group II Category 3 (Zone 2) environments.

Hazardous Location classification: ATEX: EPS 15 ATEX 1 025 X, II 3G EX ec IIC T4 Gc

WARNING EXPLOSION HAZARDS!

Substitution of components may impair suitability for this environment.

Do not disconnect the unit or remove or insert the fuse or battery unless power has been switched off or the area is known to be non-hazardous.

A suitable enclosure must be provided for the end product which has a minimum protection of IP23 and fulfils the requirements of the EN 60079-0. Sufficient ventilation must be ensured in the final installation.

Do not use batteries other than the original batteries supplied by the manufacturer or batteries, which are approved according to EN/ IEC 60079-7.

6. INSTRUCTIONS FOR REPLACING BATTERIES

Batteries need to be replaced periodically. The time interval depends on the ambient temperature in which the battery is used and on the number and depth of discharge cycles. In a typical application it is recommended to replace the batteries at least every 2 years. Disconnect battery fuse before replacing the batteries.

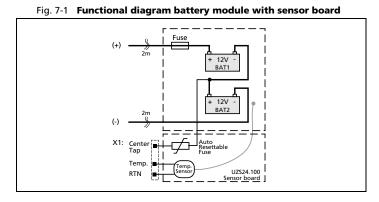

Regarding disposal of used batteries see chapter 2.

| Altitude | 0 to 6000m (0 to 20 000ft) | |

*) Operational temperature is the same as the ambient temperature and is defined as the air temperature 2cm below the unit.

9. SENSOR BOARD

The battery module includes a monitoring and to batter protection board. This board contains a temperature sensor and a center-tap connection with an autoresettable fuse to protect the center-tap wire between the battery module and the DC-UPS control unit. The use of the sensor board enables to monitor and Cernter-Tap (13) -RTN (12 charge the two batteries individually and precisely, Temperatu which extends the service life of the batteries and makes the use of matched replacement batteries unnecessary. The use of the sensor board is optional, the DC-UPS will also function without the sensor board installed. 15. RECOMMENDATIONS FOR A LONG BATTERY LIFE

Temperature:

The temperature has the most impact on the service life. The hotter the temperature, the earlier the wear-out phase of the battery begins. The wear-out results in a degradation of battery capacity. Place the battery module in a cool location, e.g. near the bottom of the control cabinet. Do not place the battery module near heat generating devices. Do not overcharge batteries!

Number of discharge cycles and depth of discharge:

Do not discharge batteries more than necessary. Set buffer time limiter to the required buffer time. The number, as well as the depth of discharging cycles is limited. A replacement of the battery might be necessary earlier. When choosing the battery capacity, always try to get the next higher capacity than required. The depth of discharge reduces the service life of the battery and limits the number of cycles.

Store batteries fully charged

Do not store discharged batteries. Keep batteries fully charged!

Charge retention is important to get the longest battery life. Stored batteries which are not fully charged age faster then charged batteries. Batteries which are not in use should be recharged at least once a year. The higher the ambient temperature, the shorter the charging interval. At storage temperatures higher than 30°C, recharging should be done at least every nine months.

16. MOUNTING ORIENTATIONS

The standard mounting orientation is the vertical installation onto a flat surface.

The following mounting orientations are also allowed:

ⅆ

Do not use the battery module in an upside down position:
