## 913 <br> CASCADABLE MULTISWITCHES <br> \section*{4 polarities and terrestrial TV}

## Description

Cascadable multiswitches for 4 polarities and terrestrial TV with 8,12 and 16 outputs. The outputs are amplified in the satellite IF band. In the terrestrial band they can be configured to function in either active or passive mode. Need to be powered from each individual receiver so that the switching and amplification of each derived output will function.

## Applications

Medium-sized collective satellite and terrestrial TV installations. It is essential that they be mounted along with end multiswitches, so as to obtain distributions of up to 64 outlets on a single line if they are installed with intermediary amplifiers.

## Characteristics

Shielded metal chassis with plastic supports. F-type connectors. Earth.

## Accessories

9090033 AV-315 Variable attenuator, $5-2400 \mathrm{MHz}, 18 \mathrm{~dB}$ with DC path. 9090029 PR-310 Preamplifier, $5-2400 \mathrm{MHz}, 10 \mathrm{~dB}$ with DC path. 9090038 BL-300 Current blocker.
