

# SWISS PUMPS

Industrial Pumps for All Your Manufacturing Needs

Reliable and unpolluted high pressure water cleaning in every industry requires PUMPS that are able to operate on ultra pure DI water.

At XTS, we specialize in just that.

### Horizontal Multi-Stage Pump

The HM series consist of light duty, stainless steel, horizontal, multi-stage centrifugal pumps for use with base mounted electric motors.

The mechanical seal is designed for easy replacement. These pumps are suitable for use with mildly corrosive liquids due to the contact parts being made of 304 or 316 stainless steel.

### Inline Pump

Our inline pumps are powered by standard electric motors. The pump base has suction and discharge ports on the same level. This inline design allows easier installation.

All pumps are equipped with a mechanical shaft seal, stainless steel or cast iron impellers. They are available with various capacities for many applications.

### Heating & Circulation Pump

The circulation pumps operate with 3 different speeds to achieve the best duty point.

The pumps are available in cast iron, bronze or stainless steel casings to cater to our clients' different industry requirements.

*“Brought to you by a group of specialists  
in purity process management,  
nobody knows this industry like we do.”*

### Coolant & Condensate Pump

Our coolant and condensate pump series is non-self priming, multi-stage, centrifugal pump mounted with standard motor. The motor shaft is connected directly to the pump shaft by a hitch.

The pump can be equipped with an intelligent protector, which effectively protects the pump from dry rotation, overload and etc..

### Submersible Motors

The submersible motors are fully stainless steel, rewind able and water-cooled. 6", 8", 10" are made of cast-iron top and bottom with epoxy-coated paint.

The other parts are of stainless steel 304. Motors for high water temperature up to 90°C and motors made of only stainless steel 316 are also available upon request.

### Why SPCO Pump?

COMPACT DESIGN / LOW OPERATION COST / CE CERTIFIED /  
LOCAL SUPPORT TEAM / INDUSTRIAL VERSATILE / ISO 9001 /  
LOW INSTALLATION COST / ENVIRONMENTAL FRIENDLY
