

# MOTORIZED CANVAS SYSTEM FOR TIPPER TRUCK

It is a covering system that is opened from one side and uncovers it for loading. It is adapted solely to tipper trucks and guarantees the total cover.

## SAFETY

It does not require the drivers to hook or unhook the cables or lateral hooks since the canvas are always anchored to the structure.

## MAXIMUM PROTECTION

The loads are completely closed up inside the tipper's body (protection against rain and wind).

## PRODUCTIVITY

More trips per day with an automatic tarpaulin system because it takes less time to cover the loads.

Operation time:

Automatic system (30 to 45 seconds)

Manual tarping (10 to 15 minutes)

## QUALITY

The structure guarantees reduced the maintenance needs.

## EXTREMELY SOLID STRUCTURE

The system flips between two steel gables. This makes the system more rapid and secure. No more cables are needed to secure the canvas once it is closed.

The tarpaulin system is built of a front and rear section and powered by hydraulics. The systems are equipped with hydraulic locking systems to eliminate roof fasten. The integrity of the structure makes it IMPERMEABLE, sealing the loads from environmental agents. It is the winning choice for transporting materials that are sensitive to water, volatile or atomized i.e. Bauxite, Sand, Fertilizers, etc.
