

FDP0605A Cyclorama Lighting

Cyclorama lightings are used for illuminating backdrops as well as lightings in stage and theatres, TV studios, exhibition hall, etc.

The Cyclorama series of floodlights are of lightweight and compact, using aluminium for its construction, thus providing good heat dissipation. Available in single unit but can be combined to form 2,3,4 or more compartments as required.

Mounting can be on the floor or hanged to lighting barrel.

HEAT MANAGEMENT

The unique dual chamber design creates a temperature difference between the lamp compartment, isolated by the safety glass from the colour filter compartment. This temperature differential creates rapid airflow passing through the luminaire and across both surface of the filter, thus, offering excellent heat-dissipation.

Specification Cyclorama Light

Item	Description
Voltage	AC230V~240V
Wattage	300W / 500W
Suitable Lamp	230V 300W / 500W
Max. Ambient Temp	<40 °C
Max. surface Temp.	<180 °C
Body Weight	1.8kg
Min Safe Interval to Flamable Object	0.4m
Min Throw Distance fr Flamable Object	0.4m
Reflector	Aluminium
Lamp Socket	R7S
Cable leghth	PVC 1.2m
Body Material	Aluminum
Colour	Black
Color Frame	156 x 140
