PRUDENTAIRE®

SD DD Single & Double Deflection

MADE IN MALAYSIA

MEMBER

SD DD | Single & Double Deflection

Introduction

Equipped with both horizontal or/and vertical deflection blades, the Deflection Grilles (Single & Double Deflection, SD/DD) are able to have adjustable flow pattern and threw length and thus providing the required air diffusion pattern (Double Deflection) and exhaust/return applications (Single Deflection).

Both horizontal and vertical blades adjustments are done manually easily without compromising the firmness of blade positions.

Adjustable flow pattern and threw length are achieved with horizontal blades directing the flow pattern and vertical blades adjusting throw length and jet width.

CONSTRUCTIONS & MATERIALS

- Average of 56% effective area
- Vanes pitch of 20mm
- Grille sizing:
  i) Minimum size: 100mm x 100mm
  ii) Maximum size: 2400mm x 1200mm
- Stainless steel construction avaliable

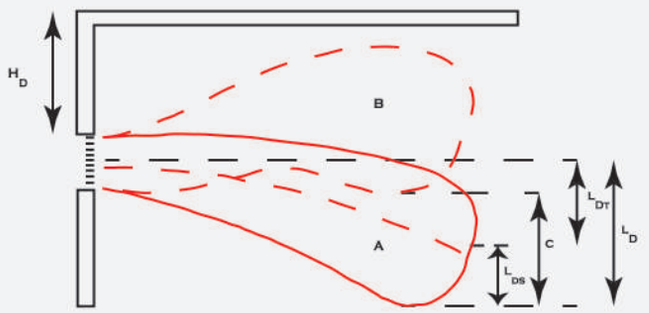
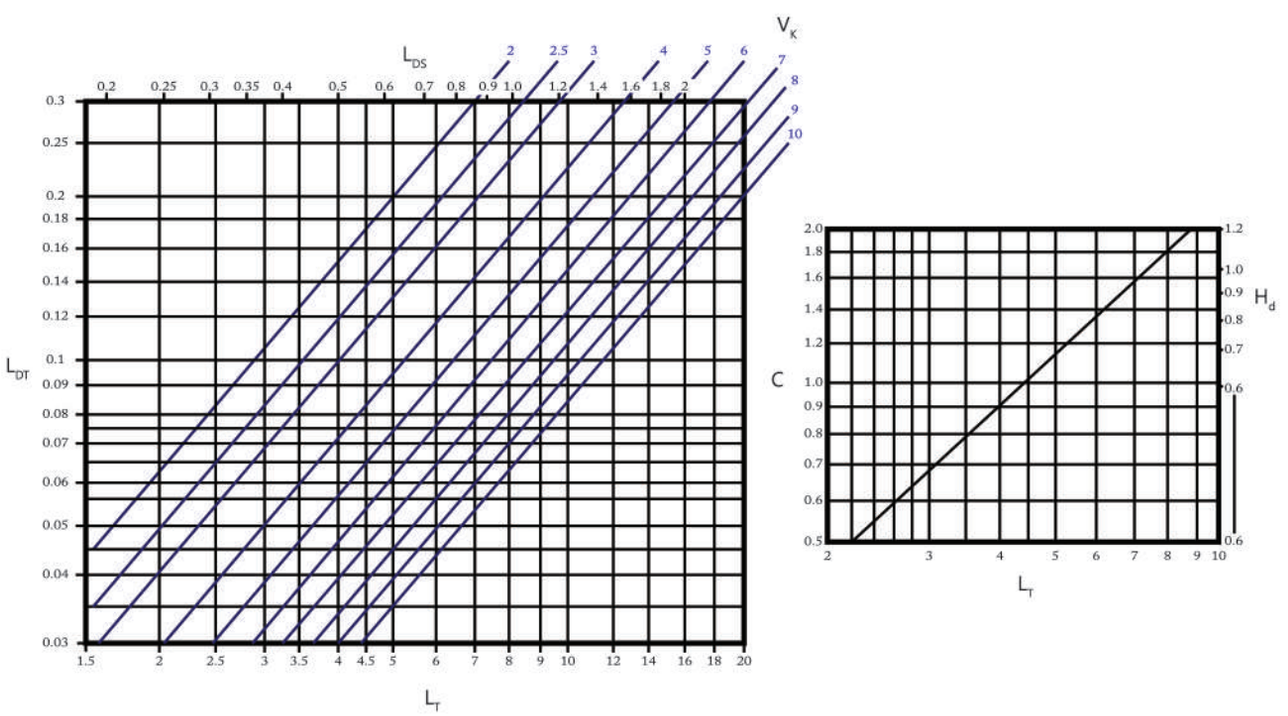
Drop Correction



Label	Description
A	Envelope of non-isothermal air stream without drop correction
B	Envelope of a non-isothermal air stream with drop correction
L_{DS}	Distance between the centre of an air current and the lowest point of the envelope
L_{DT}	Distance between the centre of the grille core and the air current centerline
C	Correction factor, m
L_T	Throw distance, m
H_d	Grilles-Ceiling height, m



Airstream Drop

The total drop is the maximum vertical distance between the centre of a grille core and the lowest point of a specified enveloper, determined by the envelope velocity V_T.

The total drop consist of two elements :

$$L_D = L_{DS} + L_{DT}$$

Drop Correction L_D

Drop correction is possible by projecting the air current upward, with supply grille having adjustable horizontal bars. The drop effect can be significantly corrected if the air is projected upward 15° to 20°, as shown in the drop correction diagram. The correction factors "C" in the diagram are only valid if the minimum distance Hd between the centre of the grille and the ceiling is maintained.

Single Deflection Grille

ALUMINIUM TECHNICAL SPECIFICATION

Frame Construction
1. Frame to be in extruded aluminium. Frame thickness should be in minimum 1.2mm thick, unless otherwise stated.
2. The margin to be in 28mm from the neck height to the edge.
3. Frame height to be in 40mm.
4. The corner of the frame should be pressed with a 90° corner piece to ensure the frames are in 90°.
5. Removable core designs are available upon request.

Vanes Construction
1. Vanes to be in extruded aluminium.
2. Vanes to be in 1.0mm thick aerofoil design to provide a better air pattern.
3. Vanes are arranged with single layer only and able to be adjusted individually.
4. Vanes pitch to be in 20mm.

Finishing
1. Finishing should be in powder coated RAL 9010 SG white matt, unless otherwise stated.

Performance
1. Free area of the grill to be in 56%.
2. Vanes angle should be with pre-set 90° and adjustable individually.
3. Single Deflection Grilles are designed to be installed as wall mounted as an exhaust or return opening.

GALVANIZED STEEL TECHNICAL SPECIFICATION

Frame Construction
1. Frame to be in galvanized steel. Frame thickness should be in minimum 0.6mm thick, unless otherwise stated.
2. The margin to be in 30mm from the neck height to the edge.
3. Frame height to be in 40mm.
4. Removable core designs are available upon request.

Vanes Construction
1. Vanes to be in extruded aluminium.
2. Vanes to be in 1.0mm thick aerofoil design to provide a better air pattern.
3. Vanes are arranged with single layer only and able to be adjusted individually.
4. Vanes pitch to be in 20mm.

Finishing
1. Finishing should be in powder coated RAL 9010 SG white matt, unless otherwise stated.

Performance
1. Free area of the grill to be in 56%.
2. Vanes angle should be with pre-set 90° and adjustable individually.
3. Single Deflection Grilles are designed to be installed as wall mounted as an exhaust or return opening.

Double Deflection Grille

ALUMINIUM TECHNICAL SPECIFICATION

Frame Construction
1. Frame to be in extruded aluminium. Frame thickness should be in minimum 1.2mm thick, unless otherwise stated.
2. The margin to be in 28mm from the neck height to the edge.
3. Frame height to be in 50mm.
4. The corner of the frame should be pressed with a 90° corner piece to ensure the frames are in 90°.
5. Removable core designs are available upon request.

Vanes Construction
1. Vanes to be in extruded aluminium.
2. Vanes to be in 1.0mm thick aerofoil design to provide a better air pattern.
3. Vanes are arranged with double layer and able to be adjusted 4 directional individually.
4. Vanes pitch to be in 20mm.

Finishing
1. Finishing should be in powder coated RAL 9010 SG white matt, unless otherwise stated.

Performance
1. Free area of the grill to be in 52%.
2. Vanes angle should be with pre-set 90° and adjustable individually to achieved to required air pattern.
3. Double Deflection Grilles are designed to be installed as wall mounted as a supply air or return air opening.

GALVANIZED STEEL TECHNICAL SPECIFICATION

Frame Construction
1. Frame to be in galvanized steel. Frame thickness should be in minimum 0.6mm thick, unless otherwise stated.
2. The margin to be in 30mm from the neck height to the edge.
3. Frame height to be in 50mm.
4. Removable core designs are available upon request.

Vanes Construction
1. Vanes to be in extruded aluminium.
2. Vanes to be in 1.0mm thick aerofoil design to provide a better air pattern.
3. Vanes are arranged with Double layer and able to be adjusted 4 directional individually.
4. Vanes pitch to be in 20mm.

Finishing
1. Finishing should be in powder coated RAL 9010 SG white matt, unless otherwise stated.

Performance
1. Free area of the grill to be in 52%.
2. Vanes angle should be with pre-set 90° and adjustable individually to achieved required air throw pattern.
3. Double Deflection Grilles are designed to be installed as wall mounted as a supply air or return air opening.
