

WEBSTER

Vertical In-Line Pump

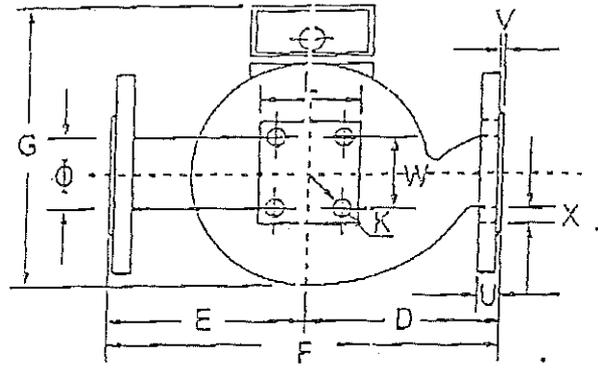

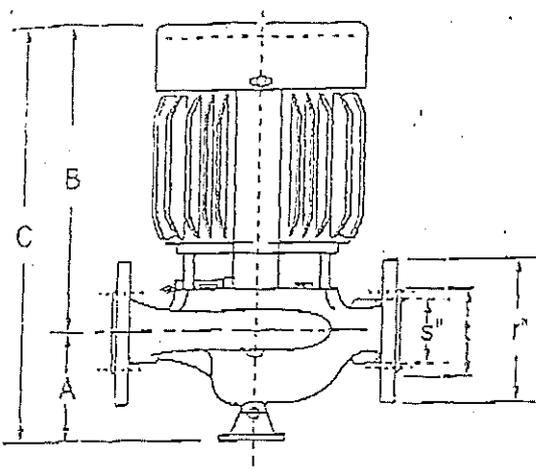

- I. **Usage**

It can be used to increase the pressure of hot & cold water for tap water, high buildings, water towers, pressureless boilers, long-distance water supply, water for fire fighting, cooling towers, air conditioning systems, garden fountains, hotels, restaurants and bathroom in dormitories to circulatively ncrease pressure for cooling water of plastic machines, to supply for water cooling tower in textile factories, dyeing & finishing mills, breweries and chemical plants as well as to concey water and liquids.
- II. **Models**

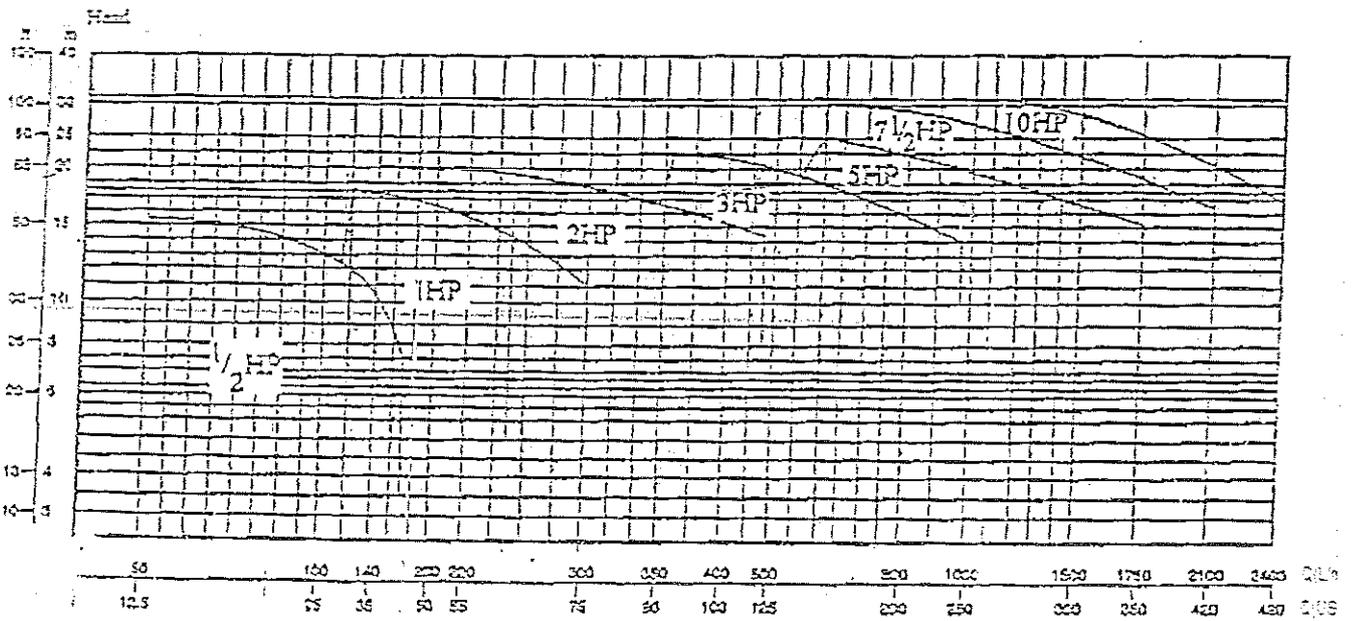

AS1 - 50 Single -step pipe pump
2" - Diameters of outlet & entry pipe(mm)
- III. **Materials**

The pump body is made of cast iron, the axle of # 45 steel and the impeller of cooper backed up by imported sealing rubber rings.
- IV. **The Starting, Running & Maintenance of the pump.**
 - i. A pressure gauge is suggested to be installed at he flange of the pump so as to moniton and control the running position of the pump before starting, the pump should be filled fully with water and the air bleeder be turned open to remove all air out. Idle running without water is fortidden, otherwise the sealing rings will be destroyed.
 - ii. After starting, turn the outlet valve gradually open and stop it in a needed position.
 - iii. To guarantee the motor to run well, a fuse should be installed at the switch. In case of noise and over temperature, the pump should be stopped immediately. Normally, the bearings of the motor should be given annual maintenance. The turning of the Motor is clockwise, which is shown by a mark on the pump.
