### WHAT IS GSM ?

Being alerted of your home's status no matter where you are with this GSM module. This 24-7 telephony monitoring system reports to you with the home status through instant call or SMS messages.

With its compatibility with all mobile networks, you will receive SMS messages of your home security system's arm/disarm status and emergency reports; such as power failure or system trouble. In case of tempered fixed line or line disruptions occurred, the system will eventually be activated automatically as your normal telephone to making out-going calls.

MODULE

## ViVOS® GSM Module

ViVOS® GSM module links to ViVOS alarm panel and then to the user's mobile phone. It enables the user to control many of the functions of the system from anywhere and everywhere as long as there is mobile network connection. The GSM module also calls or SMS the user to inform about events happening on the system.

This means the user can monitor and control the alarm system and lights from the mobile phone. In addition, the user will also be advised of alarm violations, power outages, as well as requesting reports showing the status of the system.

Using simple SMS commands such as "Arm" and "Disarm" or "Siren On" and "Siren Off" are easier to use and without the need to refer to the manual of the alarm system.

In addition, ViVOS GSM Module can also continually monitor assigned zone for the open and close activity.

## SPECIFICATION
