

Specifications of handing hardware

3. Swivels

The AISTAR 241TPS Series of swivels are designed and rigorously tested for applications where easy nozzle and hose handling is important for customer convenience. Swivels are installed in between the nozzle and the hose to provide flexibility in the system to reduce customer strain, position the nozzle properly and reduce premature hose wear.

- For use in gasoline, diesel, up to 25% ethanol blends, and B20 biodiesel fuels
- Allows for easy nozzle positioning in fill pipes
- Reduces premature hose wear by utilizing two planes of rotation
- Dual seals adds protection vs. thermal and chemical degradation
- 50 psi (3.45 bar) maximum pressure
