

**OUR HEAD OFFICE AND PLANT ARE CERTIFIED
TO BOTH ISO 9001 AND ISO 14001.**

Niigata plant:

Shimo Aozu, Tsubame-city, Niigata-prefecture, Japan.

ISO9001 : JQA-0581
ISO14001 : JQA-EM4670

SAFETY

- Operate safely in accordance with proper operation manual.
- To prevent trouble and accidents, perform daily and preventive maintenance checks without fail.

DISTRIBUTOR :

**Engine GENERATOR
SDG series**

AIRMAN®

**Engine GENERATOR
SDG series
10.5 ~ 610kVA**

SDG25S

Environmental Containment Onsite Type
SDG150S-F

"AIRMAN" MOST ADVANCED GENERATOR

Applicable for every field and jobsite!!
Further environment friendly!!

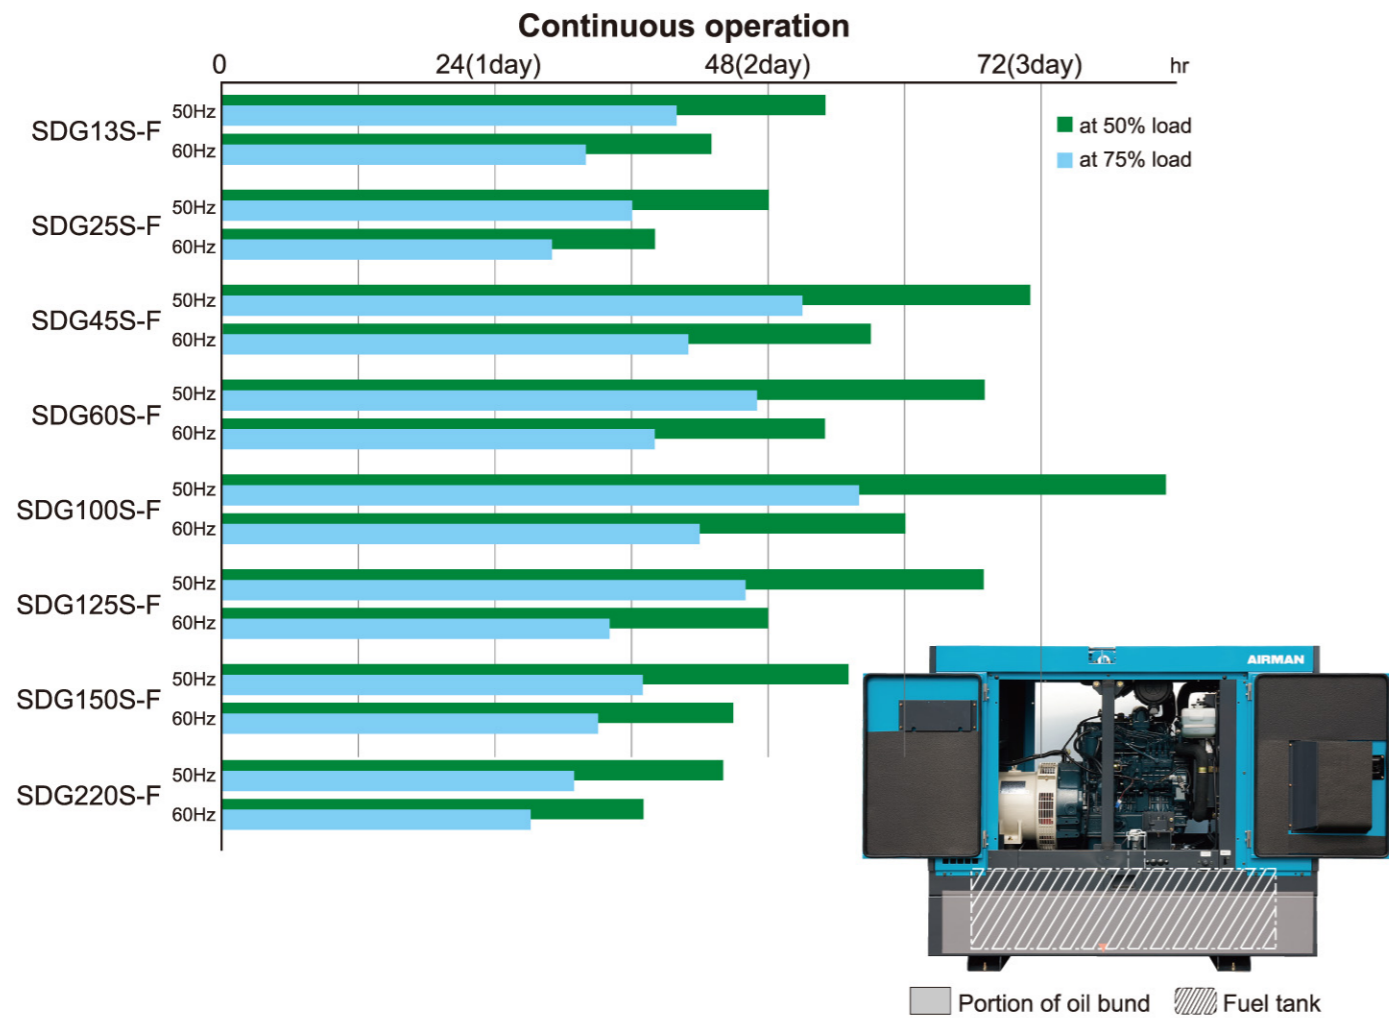

Environmental
Containment Onsite Type

10.5 ~ 220kVA
SDG-F series

Features
and
benefits

Continuous operation for the time from
1 day & half ~ 3 days

A big capacity fuel tank equipped as a standard one enables long continuous operation without any additional fuel tank provided.

● **Separate oil bund is not required**

No separate oil bund is required for the generator as well as the additional fuel tank.

● **Additional fuel tank is not required**

No potential fuel leakage along the interconnecting pipes.

● **Rain water ingress is minimized**

Rainwater will not be collected like traditional oil bund as it is fully integrated within the enclosure package.

● **Complete package is fully transportable**

Without separate fuel tank and oil bund, the fully integrated generator with long-range tank and integrated bund is fully transportable as one package.

Convention package

*Oil bund and Oil Fence are same meaning

Features
and
benefits

Specially designed construction for prevention of rain penetration

Unlike separate fuel bund and generator oil bund, Airmar's fully bundled with extended tank minimize any potential of rain water penetration into the bund and minimize the maintenance work required.

● **Prevention of rain penetration**

Air inlet port is specially designed to increase intake air and to reduce the suction pressure inside to minimize the potential rain water penetration.

● **Prevention of rain infiltration**

Insert type seal which is usually used for automobile is adopted so that rain penetration can be avoided.

● **Prevention of water and oil leak**

For the series from SDG13 to SDG60, the portions of oil fence are formed by bending so that welding work is minimized. Further, air tight welding work is continuously performed on welded portions.

Double wall steel fuel tanks have 110% fluid capacity containment.

● **Facilitated maintenance**

Utility model

Oil fence can be easily removed and reinstalled by removing the stud bolts (4 ~ 8 pieces).

Fuel tank is provided with lifting hooks as standard.

● **Warning indicator**

The warning lamp on the panel goes on when oil / water is filled in the oil bund.

High Generating Performance

Better Generating Performance

SDG series generators are coupled to low transient reactance alternator and reinforced damper coil. This increases the negative-phase-sequence current capability and minimizes the output waveform distortion. Therefore, they are suitable for wide range of non-linear load such as inverter, thyristor, computer control, discharge lighting, precision instruments and instrumental device.

Environmental Friendly

Low Noise Level

Operating noise has been minimized with low noise engines, equipped with highly attenuated muffler and special exhaust system design. All SDG models (excluding SDG100S) are adopted panel structure to minimize structural clearance and reduce internal space. Combined inlet duct design further reduces the overall noise level.

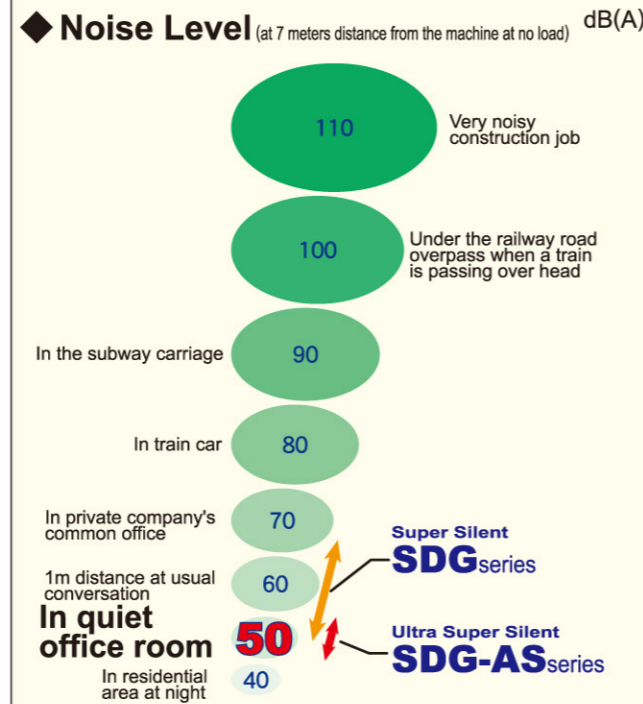

Exhaust muffler system is mounted on special design support structure to reduce vibration.

Super Silent
SDG13S~220S

Ultra Super Silent
SDG25AS~150AS

Silent
SDG300S~610S

Blowby Gas (SDG13~100, 125S-F, 150S-F)

The generators have been newly designed to circulate the blowby gas inside the machine (PCV system). They are driven by such environmental friendly engine to keep the generator outside as well as the inside from being stained.

Clean Engine

SDG13~45 (excluding 25AS, 45S-F, 45S), 100S-F~150S-F generators are approved by Japanese Government Authority as "The 3rd Diesel Engine Driven Construction Machinery Exhaust Gas Regulation". Other generators are approved by Japanese Government Authority as "The 2nd Diesel Engine Driven Construction Machinery Exhaust Gas Regulation".

Fully Equipped

Dual Voltage Models

By changing over the short connecting plate in the control panel, the three phase output voltage can be switched to 200/220V from 400(380)/440V and vice versa.

When starting engine, the indication lamp at the operation panel goes on to display the operating voltage immediately.

Continuous Operation available for a long time

A large capacity fuel tank and low fuel consumption engine have made the generators run continuously for a long time.

Also for SDG13S~610S three-way selection valve is provided as a standard equipment to be easily connected to an additional outside fuel tank. One way selection method by one selection lever avoids wrong operation when changing over suction side to return side and vice versa.

In case the mounted fuel tank is used

Engine being fueled by separate fuel tank

Automatic Air Bleeding System (SDG13~150)

Automatic Air Bleeding Device is equipped to automatically bleed air from fuel line system. This eliminates the need to prime the fuel system again should the generator be shutdown due to running out of fuel. Simply top up the fuel and turn the key switch to operation position, air in the fuel line system is bled automatically. As for both SDG125S/150S/150AS, it is possible to automatically bleed air by pushing the push button provided at the operation panel.

Parallel Operation (SDG125, 150S/AS, 610S)

High Accurate Parallel Operation System (CCR cross current prevention device) is provided as a standard equipment. Combined with an accurate AVR (automatic voltage regulator), it is possible to perform parallel operation manually.

Easy Maintenance

Maintenance with Great Ease

Daily inspection such as engine oil and coolant level can be done by opening the right side door.

For SDG45 & 60, one battery of two mounted batteries has been eliminated, thus dedicated to reducing industrial waste and maintenance cost.

Mounting and Demounting Fuel Tank

Mounting and demounting fuel tank has been made easier by making the bottom floor entirely flat. It is easy to clean the interior by removing the fuel tank.

Inspection and Cleaning Radiator

For SDG series inspection of radiator and cleaning radiator can be easily performed by removing both side front covers and dividable fan shrouds.

Maintenance Cycle

Model	Engine oil	Oil filter	Fuel filter	Air element
SDG13,25,220	250 *1	500 *1	500	1,000
SDG45~150	500 *1	500 *1	500	1,000
SDG300	250 *1	250 *1	500	1,000
SDG400,500,610	500 *2	500 *2	500	1,000

*1 For the items marked with a asterisk, first run in oil / filter change 50hr. *2 For the items marked with a asterisk, first run in oil / filter change 250hr.

Flat Frame (SDG13~610, excluding 60AS/100S/150AS)

The interior of the machine is flatly constructed so as to be easily cleaned.

Newly-Designed Panel Construction (excluding 100S)

The bonnet is of panel constructed type for easily dismantling and assembling for maintenance.

Operation

Engine Starting Efficiency

For SDG13~220, engine preheating system consists of quick heating glow plug to easily start up engine in low temperature conditions.

SDG220~610 are driven by high start-up engine which exercises great power for earth auger and vibro-hammer operations requiring instant electric flow. Start-up characteristics have been more improved for electric motor start-up as well as turbo charger and governor improved.

Control Panel

Control devices for generator and electrical appliances for engine are concentrated inside the control panel for better maintenance.

- ① Panel light
- ② Voltmeter
- ③ Ammeter
- ④ Frequency meter
- ⑤ Fuel gauge with hour meter
- ⑥ Water temperature meter
- ⑦ Three phase circuit breaker
- ⑧ Voltage regulator
- ⑨ Current selector switch
- ⑩ Leakage relay
- ⑪ Output indicator lamp
- ⑫ Warning lamps (For details, see the followings)
- ⑬ Starter switch
- ⑭ Panel light switch
- ⑮ Operation mode selection switch
- ⑯ Frequency selection switch

Electronic Governor

(SDG13~45,100S-F~150S-F,220,400,500,610)

Stable engine speed can be secured because engine speed is made easier to be adjusted.

It is possible to select frequency and make fine adjustment of engine speed only by moving up and down "Switch for fine adjustment of engine speed". It is also possible easily to perform "Idling ⇄ Operation" with the slowdown switch.

Safety

Completely Monitoring System

For SDG60~150, 300S,610S in order to eliminate the electric fault when restarting engine, they are provided with shunt trip as standard equipment to trip the main circuit breaker in case of emergency shutdown. If electric fault occurs, the warning lamp goes on and opens the generator breaker.

Warning Lamps & Emergency Stop

* Automatic starting system and battery charger cannot be built into at the same time.

General purpose Emergency backup Generator for failure of utility source SDG-E series

When an electric utility outage takes place, the set is automatically switched from the utility source to the backup generator, and when the utility power is restored, it is automatically switched back to the utility power source.

⚡ Three Attempts starting operation

If the engine failed to start up after 10 seconds cranking, additional two more attempts to start will be included to ensure the engine to be started up. "Difficulty in starting" indication lamp will only be on after engine failed to start after three attempts.

⚡ Trial (Test) operation availability

Test operation is available for maintenance and inspection as standard function.

⚡ Built-in Battery charger

ATS panel incorporates a battery charger to keep charging the battery of a standby generator.

⚡ Fault Indication Lamp

Generator fault indication lamp is equipped on the ATS panel. This is a consolidated indication for out of fuel, fuel filter clogging, low engine oil pressure, high coolant temperature, overcurrent and earth leakage.

● Specifications of ATS panel

	For SDG13/25	For SDG45/60	For SDG100/125/150	For SDG220/300	For SDG400/500
Type	Wall mounted type		Floor standing type		
Rated voltage(V)	AC 200/220				
Control voltage(V)	DC 12		DC 24		
L×W×H(mm)	850×550×300	1,000×600×300	1,600×650×300	1,700×800×500	1,700×750×600
Mass(kg)	57	75	125	260/280	300

ATS panel

* ATS panel in photo is ground standing type for outdoor use. (upon customer' request before production process this is available.)

Features and benefits

1. Simplified construction incorporating all required functions
2. Light-weight and compact
3. Easy connection between ATS panel and generator

Examples of Backup Power Supply

- Poultry facilities and Swinery
- Gas-station
- Housing, Villa residence, Office and Factory
- Communication station, Broadcasting station, Lighting facilities and Traffic signal station
- On-line system of bank, Credit union, Agricultural cooperative association
- Battery for portable telephones base
- Facilities for draining water for underground engineering construction

Selection of Optimum Generators

Example of AC arc welder

- AC arc welder is in general single phase load. So when a three phase generator is used for single phase load, it shall be equally connected to three phase.
- Three times more generating power is required for single load welding.

Generators are capable of operating following numbers of arc welders.

Model	SDG25		SDG45		SDG60		SDG100		SDG125		SDG150		SDG220		SDG300		SDG400		SDG500		SDG610	
Frequency(Hz)	50	60	50	60	50	60	50	60	50	60	50	60	50	60	50	60	50	60	50	60	50	60
180A	1	1	3	3	3	5	7	8	10	12	13	14	18	20								
200A		1	2	2	3	4	6	6	8	9	10	11	15	16								
250A			2	2	3	3	5	6	7	8	9	10	14	15								
300A					2	2	3	4	5	6	6	7	10	11	14	17	19	21	24	27	30	33
400A							3	3	3	3	5	5	6	7	9	12	13	14	16	19	21	24
500A									2	3	3	3	5	6	7	10	11	12	13	15	17	18

Note: Numbers of welders in the above table are for such ones without condensers equipped for reference purpose only. When using generators for extremely low efficient welders, reduce the numbers of welders. When using generators for AC arc welders equipped with condenser, it is necessary to be very careful for self-exciting phenomena (Output voltage of generator extremely increases in case of no load or light load). The above table shows the numbers of welders when operating 40%. In case of more Percentage than 40%, reduce the numbers of welders. When using generators for more welders than 2 units, connect evenly it to each welder, not concentrating one unit only.

Example of electric motors (three-phase squirrel-cage motor)

Engine generators are used for large and small various type electric motors.

In general capacity of electric motor is specified in kW or PS. This shows motor output capacity, not motor input capacity or not required to operate motor (machine). The relation between motor output and input is shown in the following formula.

$$1 \text{ PS} = 0.7355 \text{ kW}$$

$$\text{Efficiency} = 85\% \text{ (three phase induction motor)}$$

$$\text{Power factor} = 0.8 \text{ (three phase induction motor)}$$

$$\frac{\text{Output(kW)}}{\text{Efficiency}} = \frac{0.7355 \times \text{Output(PS)}}{\text{Efficiency}} = \text{Input(kW)}$$

$$\frac{\text{Input(kW)}}{\text{Power factor}} = \text{Input(kVA)}$$

Motor starting capacity

Model	SDG13		SDG25		SDG45		SDG60		SDG100		SDG125		SDG150	
Frequency(Hz)	50	60	50	60	50	60	50	60	50	60	50	60	50	60

	7.5	9	15.1	18.8	27.9	34	37.7	45.3	60.4	75.5	75.5	94.4	94.4	113

Model	SDG220		SDG300		SDG400		SDG500		SDG610	
Frequency(Hz)	50	60	50	60	50	60	50	60	50	60
Generator(kVA)	200	220	270	300	350	400	450	500	555	610
Motor capacity	Direct start		Simultaneously(kW)		By turns(kW)		λ-Δ start(open)(kW)		λ-Δ start(closed)(kW)	
	68	76	91	102	130	145	160	181	180	190
	147	166	188	226	265	302	340	377	415	453
	102	114	137	153	195	218	240	272	270	285
	147	166	188	226	265	302	340	377	415	453

* The motor capacities in the above table are only for reference purpose. The generator capacities vary upon instantaneous voltage drop, motor start class, efficiency, old and new type machine.

- The instantaneous voltage drop when motor starts shall be within 30% of no load voltage.
- Motor efficiency shall be 85% and load 90%.
- When operating many motor loads (starting by turns one by one) and total capacity of the loads within the values in the above table, it can operate as many loads as expected. But the total capacity of the motors which are operated first shall be within the capacity at direct start instantaneous start.
- The engine load of the engine complete with turbo-charger sometimes may be influenced by engine net average efficient pressure.

- *1 When you use single phase with O terminal at the same time for each phase from Model SDG13S/25S/AS to SDG150S/AS, the unbalance of current value for each phase should be kept within 50%. When the current values exceed the limit, please note that the output voltages for each phase may be unbalanced.
- *2 Output ratio shows an allowable output figure of the rated current. (Rated output 100% = it is allowable to use the rated current value until 100%.)
- *3 Output ratio shows an allowable output figure of the rated current. (Rated output 50% = it is allowable to use the rated current value until 50%.)
- *4 Output ratio shows an allowable output figure of the rated current. (Rated output 80% = it is allowable to use the rated current value until 80%.)

Leakage Protection Device and Grounding Method

Leakage Protection Device

This machine is equipped with a leakage relay which detects leakage caused by a defective insulation of working load to prevent an accident such as an electric shock by shutting down the circuit. However, for additional safety, install ground fault circuit interrupter (GFCI) for each load equipment close to the load equipment. The sensitivity current of the leakage relay is 30mA.

Grounding Method

<Procedure>

1. Connect a lead wire fitted with a ground rod to the leakage relay grounding terminal (E) of the three-phase output terminal board.
2. Connect the generator machine ground terminal of the package to ground.
3. Be sure to ground the package of the load equipment as well.
4. These grounding must be carried out in accordance with local regulations.
