

YUHONG WATERPLUG

Quick Setting, Effective Plugging

Product Introduction

Yuhong Quick-setting Waterplug is a powdered waterproof material made of special cement and additives. It has the characteristics of high strength and rapid hardening; it is suitable for crack repair and waterproof construction of various leaking parts. Besides, it is also ideal for angle fillet construction for corners, edges and pipe outlets.

Application Scope

It is suitable for moisture prevention and plugging for various underground buildings or structures, cable trenches, pools, kitchen and bathroom, civil air defense caverns, subways, tunnels, etc. It is also suitable for repair of underground pipe corridors, water pipes, dams and equipment foundations.

Product Features

- Quick setting between 1 to 3 minutes
- Rapid hardening
- Effectively plug leakages

Method Statement

Recommended Dosage

About 1.2-1.5kg/m² for 1 mm thickness. Coverage may vary depending upon the nature and texture of the substrate and thickness of the material.

Application Method

Surface preparation: Clean the surface thoroughly, ensure the surface is free of dirt, grease, dust, fungus and moss and any loose substrate.

Mixing: Prepare the material by adding water at the ratio of 1 : 0.27. Add water gradually and mix evenly.

Application: Waterplug has a fast setting speed of 1 to 3 minutes, therefore it is recommended to prepare the material by batches according to the need and apply quickly. For application at leakage point where there is outflow of water, dry powder can be directly applied to plug at the gap/ crack / hole and allow it to cure.
