

Product 1:

SQL ACCOUNT

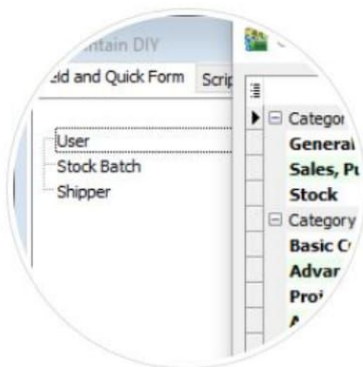

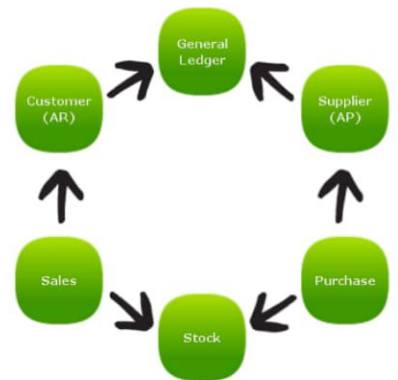

OVERVIEW

Getting things done more.

Explore the amazing features that makes SQL Account one the best software for your business. Work more efficiently with true **real-time posting** and seamlessly integrated modules. Store virtually **unlimited years** of business data for better decision-base analysis with **open period** solution.

Generate professional grade business reports with dynamic re-balancing of report structure and self-tuning query optimization. Enjoy scalable cost-effective deployment, increased system performance and ease of maintenance powered by a robust client-server architecture.

Your software should be as flexible as your business.

Create and deploy customized business software and custom reports that suitable for you

The SQL Account software can be customized to make your work even simpler, efficient and overall more productive.

Create new forms with custom SQL Account DIY fields and built-in visual components in an easy drag and drop interface. Enhance business logic with flexible SQL Account DIY script module to suite your business. Create, save, and edit custom reports that present the information you want to see and designed in the way you want to see it. All customization can be easily deployed to all employees anywhere, anytime with SQL Account Control Center and SQL Account Report Designer.

Ensure Data Integrity, authenticated data access and online backups.

Keep your data accurate and consistent with PSQL (Procedural SQL) working behind.

Safeguard your data by setting authentications for your employees. You may set to various type of access control so that your staff or employee won't simply create / modify / delete your important data.

Backup your data anytime without needing to shut down. You can now continue working while a backup runs, allowing 24x7 operation (terms and conditions apply).

Build and connect

Integrate your app with SQL Account to make accounting even better. The SDK is a simple application COM Interface where you can securely gain access to SQL Account records.

SQLSDK supports multiple programming languages such as Javascript, VBScript, ASP and Delphi.
