

The SMARTER way to track your security guard's rounds

The GT-101Z is an electronic data capture device built into an extremely rugged housing. It is designed to replace the standard USB connection type recorder. Every clocking visit by the guard will be immediately updated to the Cloud portal. The software can generate various reports of the guards's activities, negating the need to make and keep physical records.

With this system, there is no excuses for losing a week or a month's clocking data because the device is 'damaged', just when it is time to download the clocking data. Cloud feature allows handphone APP to access anytime.

Dimensions	86mm X 57mm X 28mm, Weight 100g
Color	Yellow with black bumper strips
Ingress Protection	IP67, waterproof
Data Storage	Cloud, unlimited
Supported tags	Standard 125KHz, optional 4G, Bluetooth
Read Distance	3-5cm for RFID 125KHz
Communication	Standard 2G - GPRS, 4G model with real-time track - optional
Battery Life	Can support a week's usage @ approx 400 reads/day, Charging time approx 5 hours
