

The SMARTER way to track your security guard's rounds

The GT-101Z is an electronic data capture device built into an extremely rugged housing. It is designed to replace the outdated manual key-type guard recorder. Instead of using ticker tape print outs, this device actually stores all data electronically. Simply plug it into the PC, run up the free Guard Patrol Management Software and you have all the details of your guard's patrols. The software can generate various reports of the guards's activities as well as allowing you to back-up as an excel file. With this system, you can now rest assured your guards will not be sleeping on the job!

Strong structure

You can feel the strong device by your own hand

- Alloy body
- USB cable charging
- Dust-proof and water-proof
- Portable design
- Good compatibility
- Big storage capacity

PRODUCT SPECIFICATIONS

Physical	Alloy Body , Drop Resistance
Dimensions	65*55*25(mm)
Weight	390g
Working Frequency	-20°C to 70°C
Storage Capacity	60,000 pieces/ records
Reading Distance	3cm-5cm
Read time	1 to 3 seconds
Read mode	Auto-induction, no need to press
Battery	3.6V rechargeable lithium battery
Communication	USB port
Read prompt	Light + Buzzer / Vibration

Screen guard tour patrol device

- Concise and clean design
- LCD screen (It can show the time and the number of reading records)
- Strong body structure (super drop resistance)
- Durable battery (One full charge supports 15 full days (24*15 hours) continuously reading tags)
