# **Conventional UT**

### **Test Wizard**

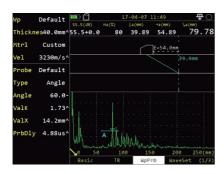

Setup wizard will help users configure the professional operation process, enabling more professional testing.

# **DAC Curve**

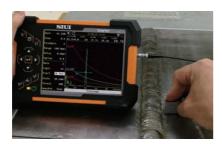

Bring easier and more convenient flaw evaluation.

### **Weld Simulation**

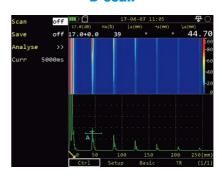

Simulate the weld shape and use the dynamic beam tracking function to assist the user to quickly determine the location of flaws in the weld.

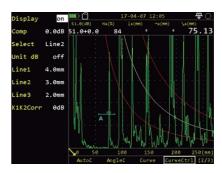

Flat weld testing

#### **B-scan**

• Display A-scan echo in imaging mode, so as to achieve more intuitive test result for easy observation and analysis.

#### **AVG/DGS Curve**

Auto created by taking a known flat-bottom hole or large flat-bottom echo for reference.

### **Probe Spectral Analysis**

 The probe waveform, spectrum and center frequency of the probe can be measured precisely by capturing echoes.

Angle weld testing

# **Thickness Measurement**

#### **B** Scan

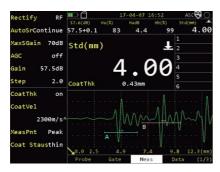

• Based on time interal or encoder, display the measurement readings in B-mode image.

# **Data Set Management**

Measurements recorded and displayed in grids.

### **Through-coating Management**

• After setting the coating velocity, through-coating thickness and coating-thickness can be displayed at the same time.

### **TDG (Time Distance Gain Curve)**

• It can be used for compensating the loss of echo amplitude due to propagation of sound path.

### **TempComp Function**

• When there is temperature difference between the calibration block and the detected workpiece, it can be used for temperature compensation.

#### **V-PATH Function**
