

BIO DISPERSANT A0085

This biodispersant is a mixture of certain microorganisms (various strains) which are specially created to transform the appearance and the physical form of organic waste that is hard to digest. These organic waste include fat, oil and grease (FOG), protein, cellulose, and hydrocarbons. The Biogt Dispersant also will change the oil and grease (FOG) to CO₂ (carbon dioxide) and H₂O (water). This is one of the best pre-treatment methods for organic waste to prevent it from entering the drainage system.

ADVANTAGES OF BIOGT DISPERSANT :-

- ✓ Reduce / remove pollutants
- ✓ Transform organic waste to water soluble substances
- ✓ Keep drains clog free
- ✓ Not damage the drains and grease traps
- ✓ Odour-control, fresh-smelling
- ✓ Does not contain phosphate contamination
- ✓ Not toxic and does not cause disease (pathogenic)
- ✓ Safe and environmental-friendly.

BEFORE

AFTER

BEFORE TREATMENT:
Grease Cap Thickness = 8 inches
Grease Blanket = 100% Cover
Grease = Compact
Cleanout Cycle = 25 - 30 days

65 DAYS AFTER TREATMENT:
Grease Cap Thickness = Less than 1 inch
Grease Blanket = Less than 48%
Grease = Lose
Cleanout Cycle = 0
