

Interflow check valve models IVC and IVCT are primarily single plate swing check valve with a short pattern wafer body conforming to the API 6D and ANSI B 16.10 face to face dimensions. The valve has a simple but robust construction with reliability. The low inertia disc design enables the valve to open or close with a very low differential pressure which make them ideal for services operating under low differential pressures.

The pressure drop across the valve in fully open condition is relatively low and makes them ideal for pump discharge duties. The eccentric disc shaft in combination with the disc seat guarantees a positive shut off of the returning media.

The short face to face dimensions and low weight allows a simple space saving installation between the mating companion flanges. The valves are suitable for mounting between weld neck or slip on type companion flanges of different standards. The need for flange gaskets during installation is totally eliminated in the case of IVC model due to the in-built face sealing 'O' rings provided on the sealing face. Gaskets are recommended while installing IVCT model valves.

Conformity to codes and standards

Design & face to face dimensions	API 6D/ ANSI B16.10
Valve testing	API 598
Flanged standard conformity	ANSI 150, DIN PN10 & PN 16, BS 10 Table D & E

Product Code CF01

Technical Specifications

Valve type	Self acting non-return valve.
Description	Single plate wafer type swing check valve.
Body type	Short pattern wafer type
Disc type	With integral hinge pin
Model nomenclature	IVC- check valve with rubber O-ring seat and face sealing IVCT-check valve with PTFE seat and serrated contact faces
Size range	25 NB to 600 NB
Pressure rating	PN16 (max)
Operating temperature range	-25° C to 200° C (depending on MOC)
Seat leakage	Zero leak/tight shut off
Standard material of construction (MOC)	
Body	SGI/ WCB/ CF8/ CF8M/ CS-IS 2062
Disc	SG1/ WCB/ CF8/ CF8M
Seat	EPDM/ Viton/ Nitrile/ Neoprene/ Hypalon- for IVC PTFE or GFT- for IVCT

IVC, IVCT CHECK VALVE

Key Features

- Very low face to face dimensions hence space required for mounting is less than 10% of that of conventional valves.
- Very low weight- total weight is only approximately 1/6 the weight of a conventional check valve.
- Short wafer body enables mounting the valve with shorter length fasteners of lesser number compared to flanged swing check valve. Approximately 50% saving in cost of fasteners.
- Considerable secondary advantages resulting in substantial savings in handling, packing, transportation, installation and maintenance.
- Saving in terms of overall length required for piping.
- Tightening torque to be applied on the companion flange bolting is lower due to face sealing O-rings.
- Practically maintenance free due to fewer number of parts and simple construction.
- Self centering in pipeline due to controlled outside diameter, enables easy installation.
