# Powder Transfer Diaphragm Pumps

The Yamada Powder Transfer Pumps were specifically designed to move bulk solids more effectively throughout your process.

They are a cost effective replacement for Augers and Conveyors and eliminate unsafe and labor

intensive means of moving bulk powders.

These heavy duty pumps consistently transfer fine-grained (100µm or finer), low bulk density (5 to 10 lbs/cubic feet or 0.08 to 0.16kg/liter), dry powders in a dust-free operation.

Yamada offers a base unit specifically for light powders, which include the following standard features.

- Conveying distance depends upon the micron size and the bulk density of the powder. For example, fumed silica can be conveyed a maximum of 150 feet (45m). Flour can be conveyed a maximum of 40 feet (12M). Refer to the Yamada "Pumpable Powders" data sheet for specific materials.
- Powder must be 150 mesh(106 micron)or smaller size particle / powder and dry. The Pump will not pump crystals or flakes and the bulk density should be less than 50lbs/cubic feet.(0.8kg/liter) The higher the bulk density, the shorter the conveying distance and the lower the flow rate.
- The Pump can be located a maximum of 15feet(4.5M) above powder source.
- Yamada recommends aeration / fluidization of the powder a minimum of 10 to 15 seconds prior to starting the pumppremature diaphragm, center shaft, and center disk failure can be avoided.
- PTFE check balls are recommend for sticky powders.
- Yamada recommends regulating compressed air to 70PSI(0.5MPa) <u>Maximum</u>.

#### **Condition of powder**

- Apparent specific gravity is 0.5 or less
- Angle of respose is 30 degree or less
- Powder must be completely dry
- Powder must have large fluidity

### **Applications**

Activated Carbon
Acrylic Resins
Aluminum Oxide
Bentonite
Carbon Black
Cereal Flours
Clay Powder
Diatomaceous Earth
Expanded Mica
Fire - extinguishing
Powder
Fumed Silica
Ground Limestone
Kaolin
Micro Dolomite Filter

Dust
Pearlite
Pesticides
Pharmaceuticals
Pigments
Powder Coatings
Powdered Plastics
Powdered Rock
Quartz Powder
Salicylic Acid
Silicones
Starch
Talc
Toners
And many more...

#### **♠ REMARK**

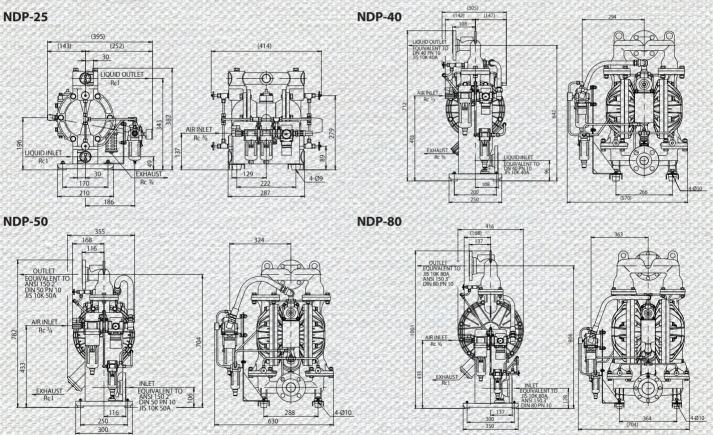

The performance data for powder transfer is highly dependent upon the material being pumped and the application. A trial of the pump in the actual use environment is recommended to verify the actual performance capabilities for any given material.
