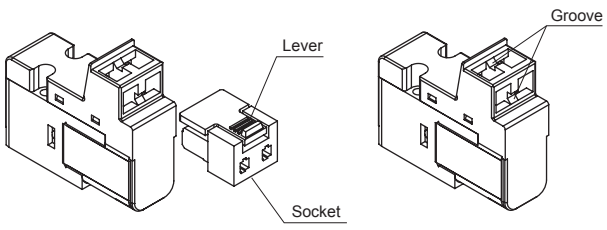
How to use the E and EJ models

How to use the E connector

■The E connector has top and side connectors to which sockets can be connected. The socket assembly is connected from the upward direction at shipment. Select the connection direction based on the installation environment.

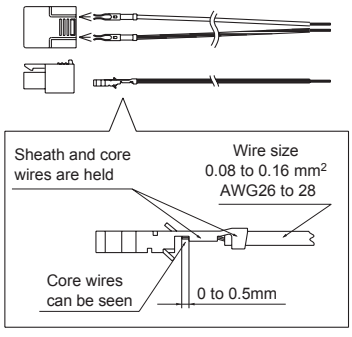
■How to mount and remove socket

- When mounting the socket, hold the lever and socket with fingers and insert straight into the square window on the connector body. Align the lever jaw with the groove on the connector body and lock it. When mounting from the top, position the socket so that the lever faces the front. When mounting from the side, position the socket so that the lever is in an upward direction.
- When pulling out the socket, press down the lever to release its jaw from the groove, then pull straight out.



■How to connect lead wire

- Strip the end of the lead wire by about 3 mm. Align the end of the core wires, insert them into the contact terminal, and crimp with a crimping tool. When crimping, check that both the sheath and core wires are held, and 0 to 0.5 mm of the core wire end is visible.
- After crimping, position the contact terminal as shown below, and insert into the square window on the socket. The terminal locks when it is inserted to the end. After inserting, pull the terminal lightly to check that it is locked.



How to use the E□J connector

■Use the lead wire with limited bending as shown in the figure below.

C/D connector wiring method

Referring to the figure below, wire the connectors with (1) to (4).

[Procedure]

(1) Peel the sheath at the end of the lead wire by 2 to 3 mm.
(2) Crimp the lead wire with a dedicated tool.
(3) Insert the terminal into holes at both ends of the socket.
(Note) Check the orientation for insertion.
(4) Insert the socket into the solenoid valve connector section.

Crimping tool (manufactured by CKD)

* For the details of crimp terminals and crimping tools, contact CKD.

(2) Terminal crimping section

Note: Be careful with the polarity of ⊕ ⊖ with the lamp and surge suppressor equipped models. An incorrect polarity will not result in a short-circuit, but the valve will not operate.

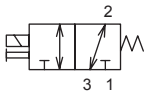
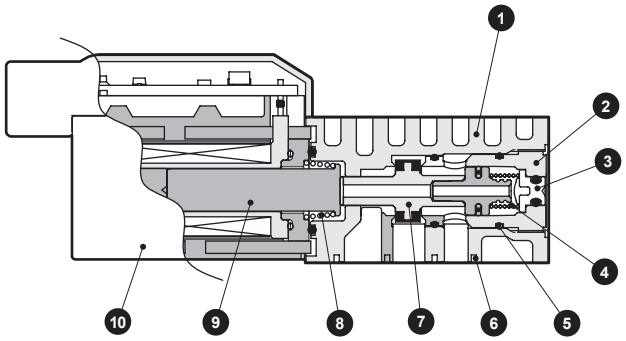
Internal structure and parts list

● 2-position single (self-reset)



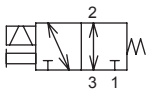
Port numbers 1, 2, and 3 are
Port 1: P, NC
Port 2: A, COM
Port 3: R and NO.



Main parts list

No.	Part name	Material
1	Body	Resin
2	Body (plug)	Resin
3	Manual button	Resin
4	Valve spring	Stainless steel
5	O-ring	Fluoro rubber
6	Body gasket	Fluoro rubber
7	Valving element	Aluminum, hydrogenated nitrile rubber
8	Plunger spring	Stainless steel
9	Plunger	Stainless steel
10	Coil assembly	-

● 2-position single (self-hold)



Port numbers 1, 2, and 3 are
Port 1: P, NC
Port 2: A, COM
Port 3: R and NO.

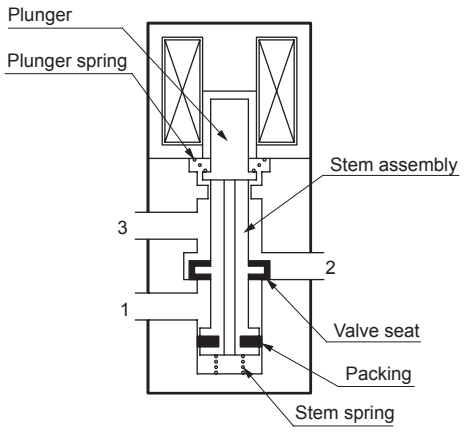
Operational principle

● 2-position single (self-reset)

The 3QR Series structure is a pressure balanced type poppet valve, which is not affected by the working pressure and achieves a low wattage, large flow rate performance.
It can be pressurized from any of ports 1, 2, or 3.
The stem assembly valve seat and packing have the same diameter, so each port pressure differential is canceled by the stem assembly's through hole and pressure is balanced at both ON and OFF.

● When not energized
The stem assembly is pushed toward port 1 side by the plunger spring force transmitted by the plunger.
Port 1 is closed due to the stem assembly valve seat and packing. Ports 2 and 3 are opened.



● When energized
When energizing the coil, the plunger is suctioned toward the coil side, while the stem assembly is moved by the stem spring force and Ports 1 and 2 are opened. Port 3 is closed.
