

## The proper product usage and maintenance for ARISSTO Machine

1. Like most other electrical appliances, please switch machine to OFF mode from standby mode when unattended/unused such as during night time or when owner is away, this could avoid damaging the product due to unstable electrical current or thunderstorm, thereafter, the practice also helps to save electrical energy and as well as an effort to go green.
2. Please avoid to place coffee machine near any sources of heat such as cooking stove, rice cooker, oven and others to avoid damages caused by external heat energy or radio waves.
3. Please appropriately clean the coffee machine after every usage. Other than that, please also keep the surrounding of the machine clear of food or liquids to prevent insects such as ants entering to the machine which may affect the functionality of the machine.

Thank you for your kind attention and support.  
Have a good day!
