

SR02P SERIES MOTORIZED VALVES

DESCRIPTION

SR02P series motorized valves are used to control the opening or closing for the pipe in the chilled/hot water system so to control the room temperature. The valve is driven by hysteresis synchronous motor with spring return. It is normally close ball valve.

When the thermostat is working, it will provide an opening signal, and the motorized valve will be opened. Then the chilled/hot water enters the coil and the coil starts to supply the cold/warm air to the room. When the room temperature rises to the set point, the thermostat will cut the valve power off. At the same time the valve will be closed by return spring and shut off the water to the coil. The room temperature will be kept in the setting range all the time through the opening and closing the valve.

The switch of the 2-way valve is only used as auxiliary switch for the output signal. The 3-way valve with 2 or 3 auxiliary switches is 3-point valve.

SR02P series motorized valves have detachable and non-detachable types. The detachable valve actuator and valve body is connected with supporting axis and matching button. It is convenient to install and be wiring for the valve actuator can be installed after the installation of the valve body.

*** Notice:** When the valve is mounted on vertical pipe, it must be prevented from dripping. If the valve is used in high-rise building, please install pressure reducing valve on branch pipe of ground floor.

Notice:
After installation,
must remove the lever stopper
before the first use.
