

# Copeland Scroll™ compressor ZFKQ for refrigeration applications

Product catalogue

**Copeland**™  
brand products

 **EMERSON**™

# Pioneering technologies for best-in-class products

Emerson is the world's leading provider of heating, ventilation, air conditioning and refrigeration solutions for residential, commercial and industrial applications, supporting the industry with advanced technology, technical support and training services.

For more than 80 years, we have been introducing innovative technology to the market, from the first semi-hermetic and hermetic compressors in the 1940s and 1950s, the high efficiency Discus™ semi-hermetic, air conditioning and heating scroll compressors in the 1980s and 1990s, to the new Stream semi-hermetic and the digital scroll compressor technology of today.

Based on this, we have developed an unequalled range of solutions for the refrigeration and air conditioning markets. In recent years, we have become a major solution provider to the air conditioning and refrigeration industry. Our range of Copeland™ brand products addresses the diverse needs of all of these markets. With scrolls and semi-hermetic compressors available for all main refrigerants, equipped with smart electronics and capable of modulation, Emerson has taken compressor technology to new heights.

## Our vision:

Emerson, with our partners,  
will provide global solutions to improve human comfort,  
safeguard food and protect the environment.

Emerson developed the ZFKQ range of Copeland Scroll™ compressors to provide the best performance in low temperatures. The series has a wide application envelope that can operate from -40°C to +7°C evaporating temperature. Its optimized design perfectly fits frozen food application requirements while its scroll compliance mechanism makes it highly tolerant of liquid slugging.

The range consists of:

- The ZF\*KQE models that operate with liquid injection in order to control discharge temperature and extend the operating envelope.
- The ZFI\*KQE models that are optimized for vapor injection with the use of a subcooler. This boosts the refrigeration system's cooling capacity and efficiency.

## Features and benefits

### High efficiency all year round

- The unique Copeland Compliant Scroll design patented by Emerson operates under continuous scroll flank contact, maintained by centrifugal force. This minimizes gas leakage while maximizing efficiency.
- With its capability for condensing operation down to 4°C on low temperature applications, Copeland Scroll technology provides the best seasonal efficiencies.
- Equipped with dynamic discharge valve that allows the discharge gas to reach desired pressure. This helps reduce efficiency loss by preventing gas re-compression.
- The vapor injection technology allows ZFI\*KQE compressors to perform higher efficiency than single-stage compressors at low temperature operation condition. Thus makes ZFI\*KQE the best in-class performance.

### Compactness

- The small footprint of Copeland Scroll compressors enables compact system designs.
- Weight and dimensions for refrigeration equipment is reduced with increased capacity per compressor weight.

### Robustness and reliability

- The Copeland Compliant Scroll design is tolerant to stresses caused by liquid slugging, flooded starts and debris commonly found in refrigeration systems.
- Easy to service and maintain due to their compact size and lightweight, simple design.
- Engineered for optimum performance with today's chlorine-free refrigerants.
- The Copeland Scroll compressor design has several inherent reliability advantages:
  - 70% fewer moving parts than reciprocating compressors
  - Axial & radial scroll compliance provides improved liquid handling capability
  - Hermetic design reduces leak potential
- Redesigned suction gas flow results in lower oil circulation and better motor cooling.
- EVI CoreSense™ Control kits provide advanced features to ensure optimum system operation.

## Compressor protection

- ZF\*KQE and ZFI\*KQE compressors are supplied with internal thermal protectors that prevent motor overheating in case of loss of phase or low refrigerant charge.
- The ZF\*KQE models that operate with liquid injection through DTC Valve in order to control the discharge temperature.
- The ZFI\*KQE models that can operate with Emerson EVI CoreSense™ control kits in order to control vapor injection superheat as well as a safe discharge temperature.

## Smooth operation

- All Copeland Scroll compressors are designed with a discharge check valve that isolates the high pressure discharge gas. This allows the compressor to start unloaded, resulting in low inrush currents.
- Smooth operations are made possible by the continuous compression process. This generates less vibration than reciprocating technology.

## Delivers unmatched energy efficiency: 5%–20% improvement

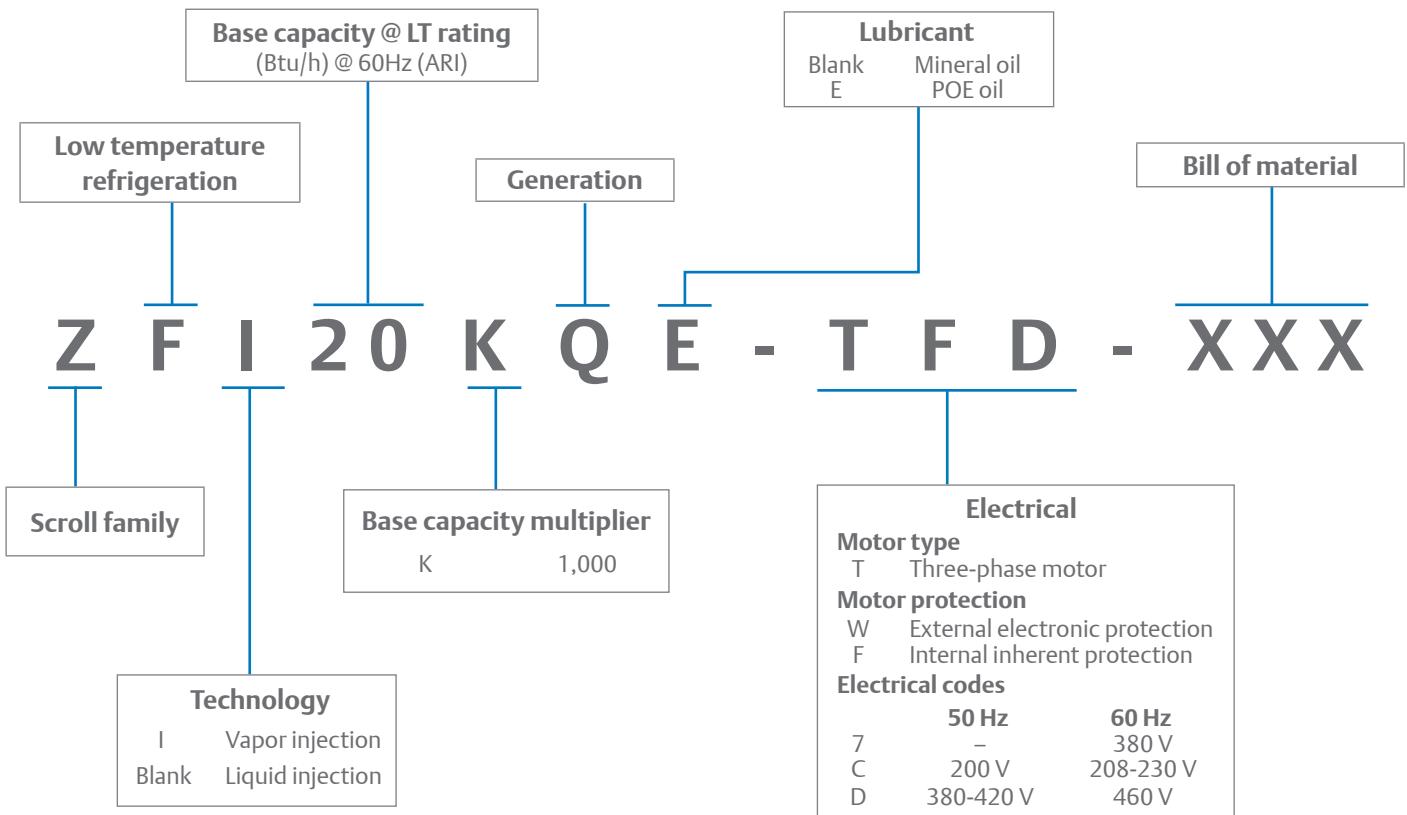

- Motor, scroll and bearing redesign minimize annual energy consumption.
- Precision machined scrolls provide the highest isentropic efficiency and wear-in for improved performance over time.
- New valving technology adjusts the scroll compression ratio based on operating condition, significantly improving low ambient performance.
- Using vapor injection improves system capacity by 50% and efficiency by 20% on average at the low temperature rating condition.

## One model for multiple refrigerants

- All ZF and ZFI compressors are qualified for R22, R404A, R507, R407A/C, R407F, R448A, and R449A.

Notes: This catalogue only provides performance tables for R22 and R404A. Please visit Select Software Asia for more information.

# EVI CoreSense™ control kits and wiring diagram

## EVI CoreSense control kits

### Introduction

The EVI CoreSense control kit of ZFI compressor is intended to control vapor injection, maintain a safe discharge temperature, and provide intelligent diagnosis and protection.

The kit includes a printed circuit board (PCB), an electronic expansion valve (EXV), and three sensors, as well as containing a transformer and an EXV filter. All parts are common, except the EXV valve orifice size, which will be applied to different ZFI models.

In vapor injection application, the valve is driven by sensors mounted near the heat exchanger and attempts to maintain the vapor outlet sensor 5K higher than the vapor inlet. The system will switch to discharge line temperature control if vapor injection is insufficient to maintain a safe discharge temperature. If the discharge temperature becomes dangerously high, the system will stop the compressor, turn on an LED alarm, and trigger a voltage free alarm relay contact. The compressor can auto-reset, but not lockout.

Emerson provides customer EVI CoreSense control kits with and without CoreSense box.

EVI CoreSense control kits			
Part number without CoreSense box	Part number with CoreSense box	Apply for ZFI models	EXV valve orifice size (Identification code)
562-0313-00	562-0291-01	ZFI20~ZFI26	Ø1.3mm (TS113C03)
562-0313-01	562-0291-02	ZFI36~ZFI59	Ø1.65mm (TS116C03)
562-0313-02	562-0291-03	ZFI68	Ø1.8mm (TS118C03)

### Printed circuit board

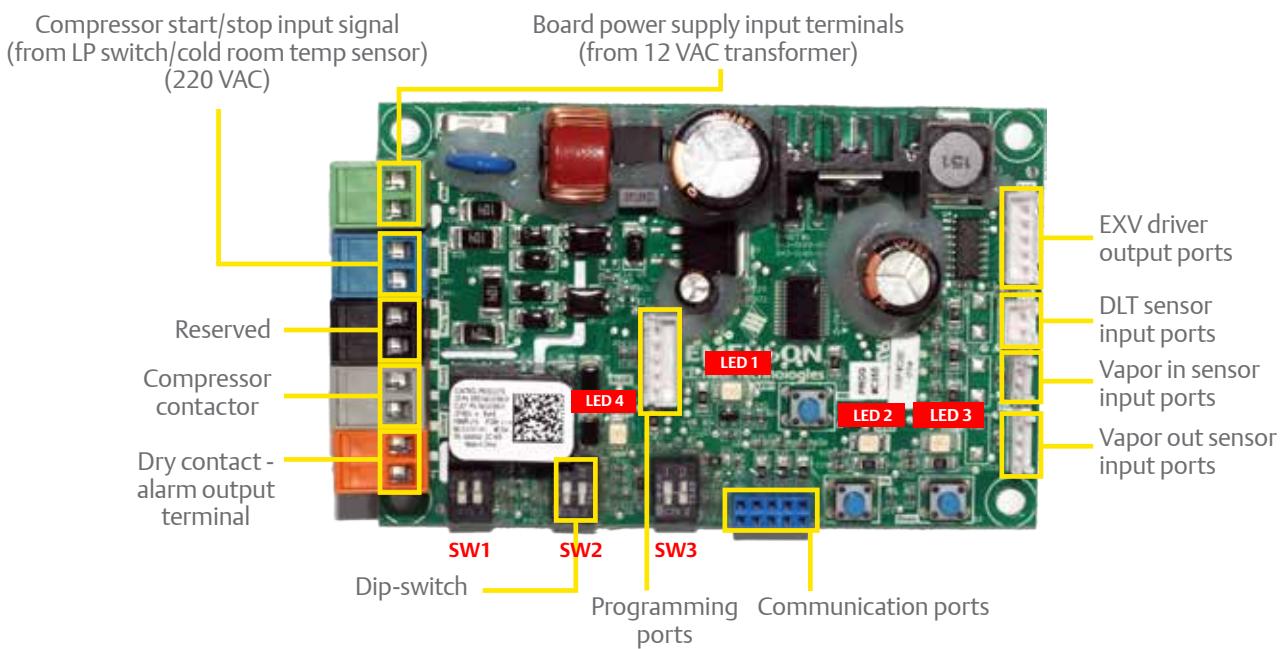

Wear a ground strap when working with the PCB to avoid the risk of damage from static discharges.

General PCB layout, input and output ports are shown in the image below, the ports to EXV, DLT, as well as the vapor in and vapor out sensors are done with Poka-yoke connector design. Connect sensors, EXV, and system wiring as shown in wiring diagram.

The PCB is supplied power through a transformer with a power input of 50/60Hz, 220VAC, and an output of 12VAC to the PCB board.

For EVI control kits with CoreSense box, the board and transformer are both mounted in the box, using 4 x Ø5mm holes at 61 x 101mm centers, fastened by screws. Spare part number is 543-0189-01 for field service.

For EVI control kits without CoreSense box, we provide individual parts for compact system design. The board is with 4 x Ø4mm holes at 61 x 101mm centers, please use plastic stakes provided. Spare part number is 543-0219-01 for field service.

## Dip-switch setting

The dip-switch default setting has been done in-factory, please do not change setting and ensure that the replacement board is set correctly.

For the glide-refrigerants application like R407A, R407F, R407C, we would recommend 10K superheat. Please contact your local Emerson sales and application engineer to reset the dip-switch.

Dip-switch default factory setting			
	SW1	SW2	SW3
BIT1	ON	OFF	OFF
BIT2	ON	OFF	ON
Dip-switch Setting position	ON 1 2	ON 1 2	ON 1 2
Function description of default setting	1. Discharge Line Temperature (DLT) control target $\leq 110^{\circ}\text{C}$ 2. Vapor out superheat target is 5K 3. Compressor will shut down if DLT above $125^{\circ}\text{C}$ 4. Compressor can auto-reset and no lockout due to DLT overheat protection 5. Compressor minimum stop time is 0 minute 6. Vapor injection mode		

## LED functions

### LED1 (yellow-green)

**LED1** will light up during initialization after power on, after that, blinking lights will indicate the sensor status.

LED	Color	Compressor or sensor status	LED1 behavior
LED1	Yellow-Green	Idle compressor waiting to start	Blinks at 1 Hz
		DLT overheat protection	Blinks 2 times at 1Hz, waiting 5s, then repeat...
		DLT failure	Blinks 3 times at 1Hz, waiting 5s, then repeat...
		Vapor in sensor failure	Blinks 4 times at 1Hz, waiting 5s, then repeat...
		Vapor out sensor failure	Blinks 5 times at 1Hz, waiting 5s, then repeat...

### LED2, LED3 (yellow-green)

**LED2** and **LED3** will blink once when entering or exiting EXV manual operation, and also indicate EXV opening and closing.

LED	Color	EXV status	LED2, LED3 behavior
LED2 LED3	Yellow-Green	Opening	LED2 is flashing at 1Hz, LED3 off
		Closing	LED3 is flashing at 1Hz, LED2 off
		Fully open	LED2 constant on, LED3 off
		Fully closed	LED3 constant on, LED2 off

## LED4 (red color) alarm

LED4 will turn on when alarm is triggered by the following items

LED	Color	Sensor status	LED4 behavior
LED4	Red	DLT overheat protection	LED4 turn on red
		DLT sensor failure	LED4 turn on red
		Vapor in sensor failure	LED4 turn on red
		Vapor out sensor failure	LED4 turn on red

## Temperature sensors

The EVI kits include 3 temperature sensors. Please ensure all sensors are mounted in the correct locations, fastened, and insulated properly.

The discharge temperature sensor should be installed approximately 178mm (7 inches) from discharge tube outlet. If a service valve is installed at the discharge tube, the sensor should be located 127mm (5 inches) from the valve braise.

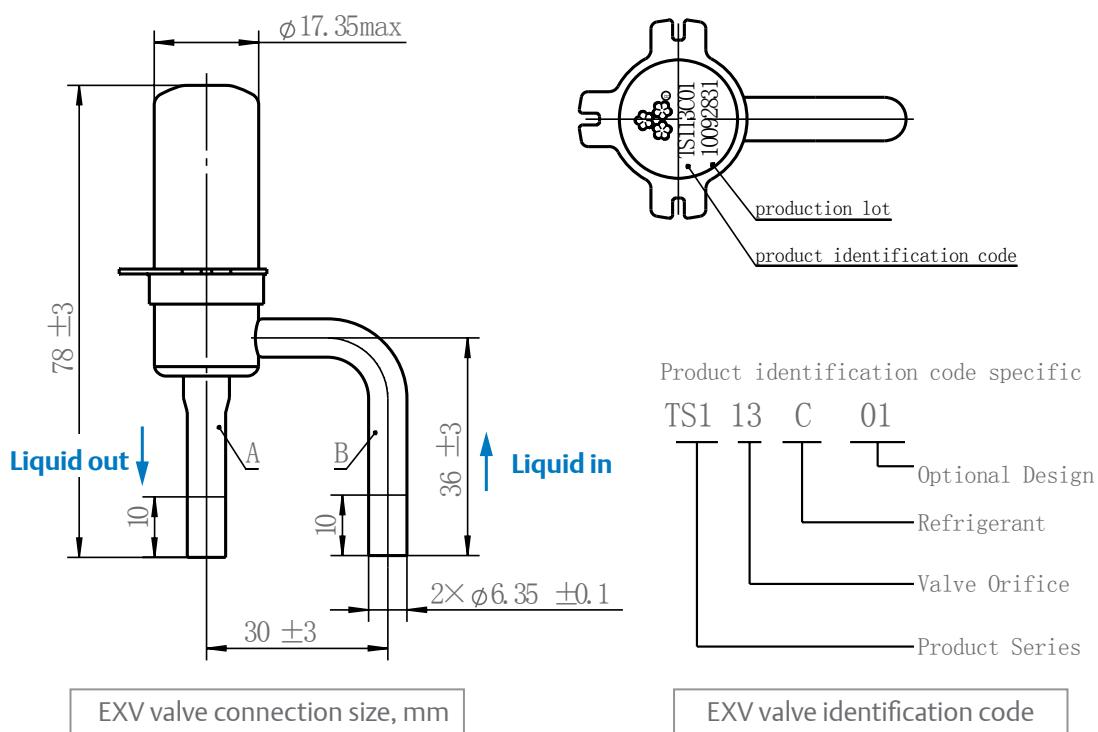

The vapor-in sensor is connected to the pipe between the EXV and PHE. The vapor-out sensor is connected to the pipe from the PHE to the compressor vapor injection port. Don't make the vapor-in and vapor-out sensor location reversed.

Sensor	Wire length	Resistance value vs. temperature	Open	Short
Discharge temperature sensor	930mm	351.6 kΩ @0°C 100.0 kΩ @25°C 5.8 kΩ @100°C	>1000kΩ	<400Ω
Vapor-in sensor	1360mm	28.1 kΩ @0°C 10.0 kΩ @25°C 0.9 kΩ @100°C	>500kΩ	<500Ω
Vapor-out sensor	750mm	28.1 kΩ @0°C 10.0 kΩ @25°C 0.9 kΩ @100°C	>500kΩ	<500Ω

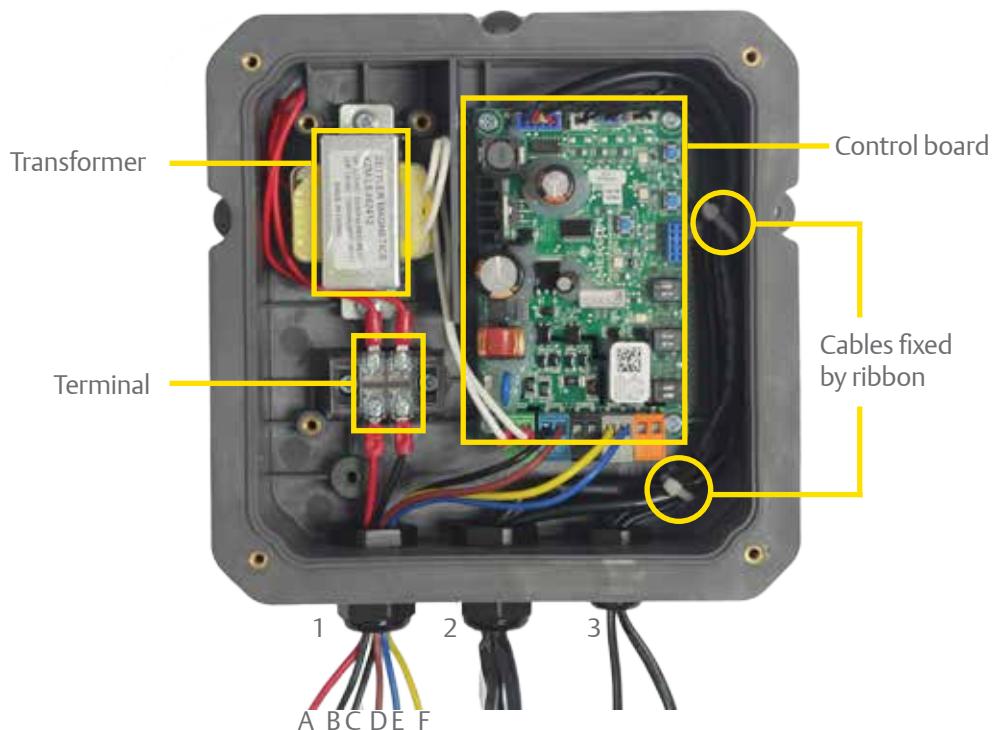

## Electronic expansion valve (EXV)

The EXV contains an EXV-valve and EXV-coil, lead wire length for coil is 1796mm, the valve size includes Ø1.3mm, Ø1.65mm and Ø1.8mm depending on system size, applied to different ZFI models.

The liquid refrigerant should pass from the bending tube and flow out from the straight tube. Please weld the filter before the EXV provided along with the kits.

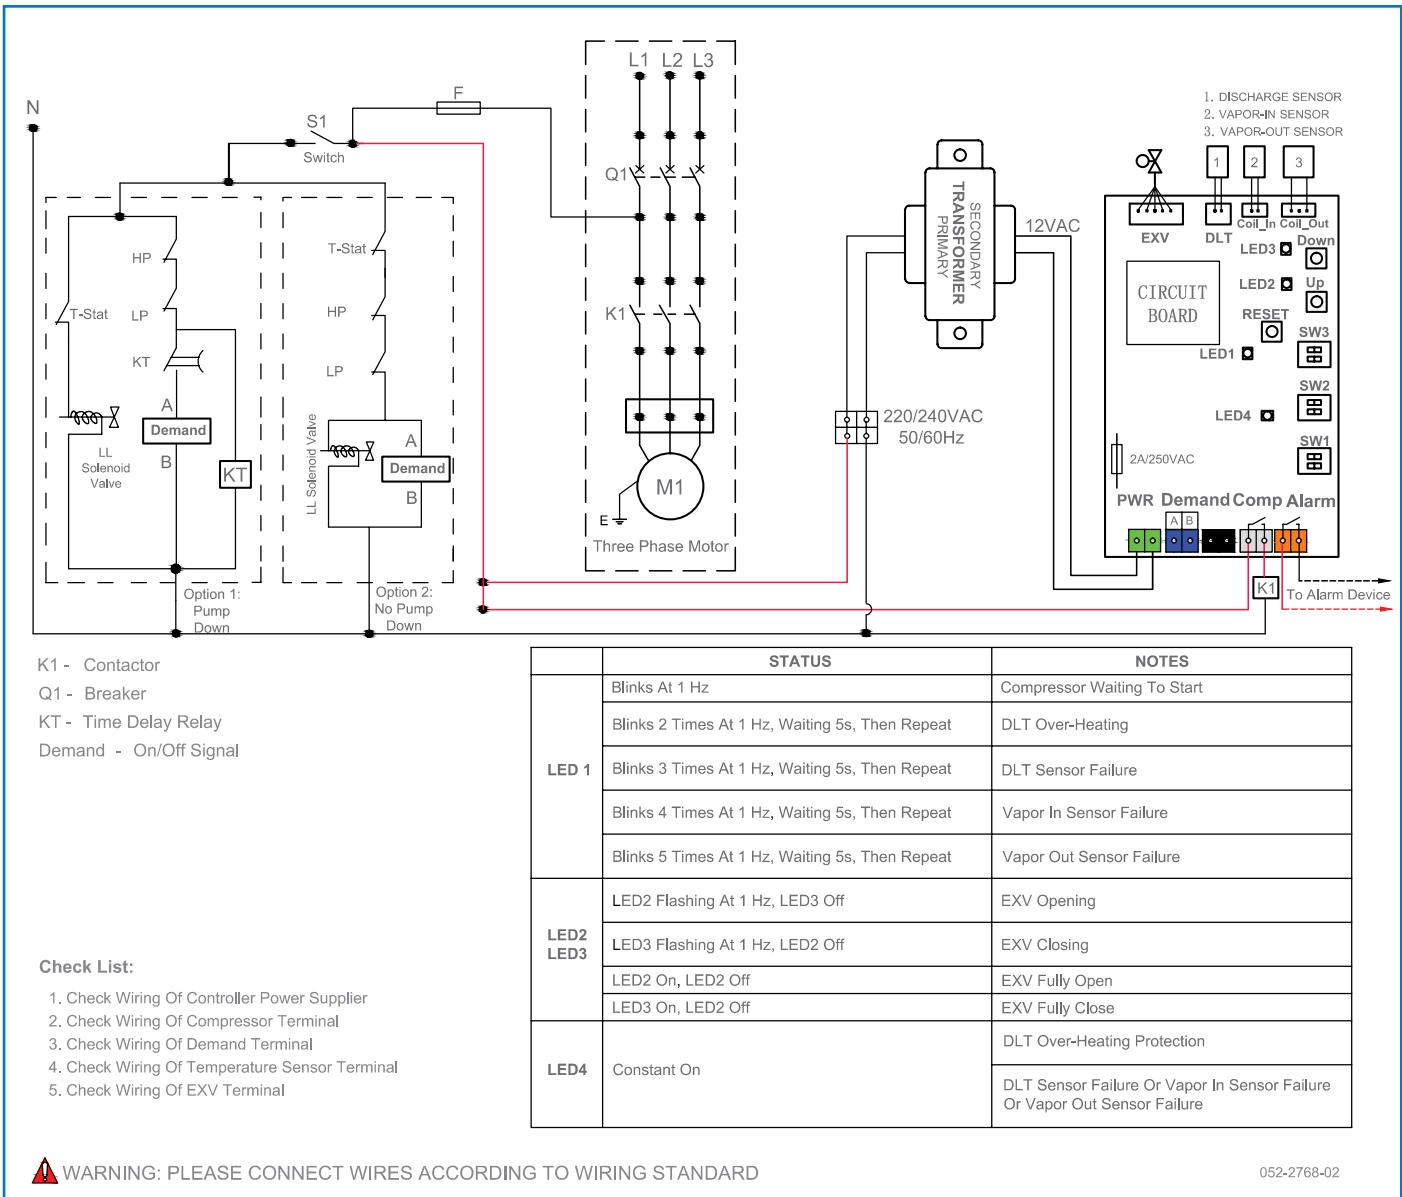

## ZFI standard control box wiring example

Waterproof gland no.	Gland 1	Gland 2	Gland 3
Wire function	A (red) and B (black): Controller power supply input (220–240 VAC 50/60 Hz)	EXV Coil DLT Sensor	Vapor-in sensor Vapor-out sensor
	C (black) and D (brown): Compressor start/stop input (220–240 VAC 50/60 Hz)		
	E (blue) and F (yellow): Compressors contactor coil Control output		
Wire connection	Wires A and B: Connect to terminal	Connect to the EXV, DLT sensor at the top edge of the control board	Connect to the vapor-in/out port at the top edge of the control board
	Wires C and D: Connect to the blue connector on the control board		
	Wires E and F: Connect to the gray connector on the control board		
Gland internal diameter range	2–3 mm		
Jacket line requirement	Internal wire size: 18 AWG		
	Rated voltage: 300 V/600 V		
	Rated temperature: 80/105 °C		
	Recommended: UL105, UL1011, UL1007		

# Wiring diagram

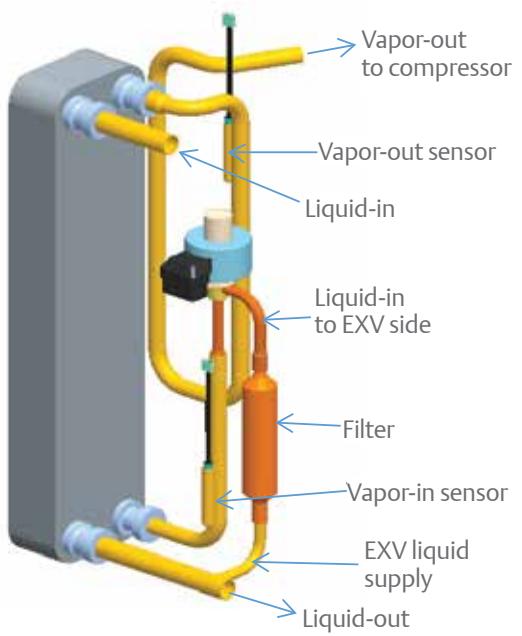

## Plate heat exchanger (PHE) and liquid line temperature

Mount plate heat exchanger in the vertical position and oriented correctly. Ensure that sensors are located correctly as well.

ZFI vapor injection compressors can deliver very cold liquid with economizer cycle. The sub-cooling of liquid line calls for these recommendations:

1. Liquid line pipe connecting the economizer to the evaporator expansion valve should be well-insulated separately.
2. The lower liquid line temperature can increase the evaporator valve capacities. Please follow the valve manufacturer's recommended liquid temperature correction factors for proper selection of evaporator expansion valve. Refer to product catalogue or select software for liquid line temperature.

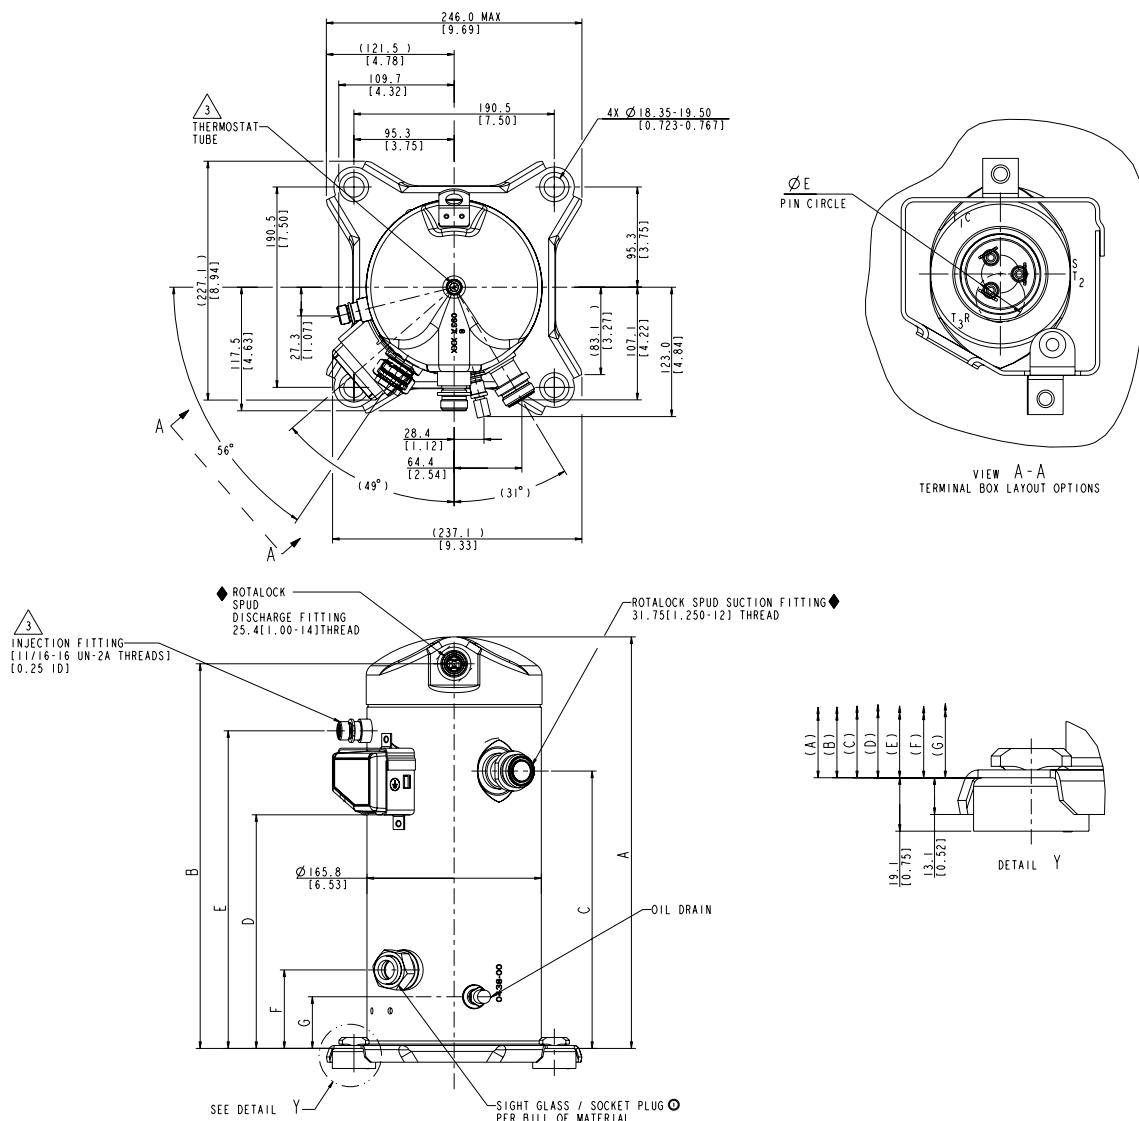

Example of PHE assembly with downstream liquid supply

## **General information**

Technical data are correct at the time of printing. Updates may occur, and should you need confirmation of a specific value, please contact Emerson stating clearly the information required.

Emerson cannot be held responsible for errors in capacities, dimensions, etc., stated herein. Products, specifications and data in this literature are subject to change without notice.

The information given herein is based on data and tests which Emerson believes to be reliable and which are in accordance with today's technical knowledge. It is intended for use by persons having the appropriate technical knowledge and skill, at their own discretion and risk. Our products are designed and adapted for fixed locations. For mobile applications, failures may occur.

The suitability for this has to be assured from the plant manufacturer, which may include making appropriate tests.

### **Note:**

The components listed in this catalogue are not released for use with caustic, poisonous or flammable substances. Emerson cannot be held responsible for any damage caused by using these substances.
