UNIQUE 8-EDGED SOLUTION FOR  
SHOULDER AND FACE MILLING

## VSM890™ -12

Weldon® End Mills: 32mm

Shell Mills: 40–250mm

### 8-Edged, Double-Sided True 90° Victory™ Shoulder-Face Mill (VSM)

Superior Metal Removal Rates (MRR) delivered through high-performance grades and chipbreakers.

Coarse, medium, and fine pitch cutter density to perfectly translate machining capability into higher productivity.

New pocket seat design for improved insert seating and great stability at roughing applications.

Applicable in a wide range of workpiece materials: aluminium, steel, cast iron, titanium, stainless steel, and high-temp alloys.

Comprehensive standard offering for cutter bodies and inserts to address light machining to heavy roughing jobs.

Available in the new WU10PM and WS40PM grades.

**WIDIA**

# VSM890™ -12

8-Edged, Double-Sided True 90° Victory™ Shoulder-Face Mill

- True 90° wall and stepping down capability.
- Axial depth of cut capability; Ap1 max up to 9,8mm.
- Optimised chip gash design for proper chip evacuation.
- User-friendly pocket numbering system.
- Cutter bodies with internal coolant supply.
- Less bur creation on the workpiece.

Super-positive rake design for low machine power consumption.

Integrated wiper facet for excellent surface floor finish.

**Unique insert rake design to reduce and perfectly balance axial and radial cutting forces. Engineered for light machining to heavy roughing in all material groups.**

-ALP

**N**

First choice for Non-Ferrous materials.

-ML

**P M S**

First choice for Stainless Steel, light machining, and finishing jobs.

-MM

**P M K S H**

First choice for general purpose in all workpiece materials. Engineered for high-feed rates.

Finishing Capabilities/Lower Cutting Forces

Geometry Strengthening/Stronger Cutting Edge Protection

## Applications

1. Face milling.
2. Full slotting with 100% radial engagement.
3. Shoulder milling with stepping down and great wall finish.
4. Shoulder milling with low axial and high radial engagement.
5. Shoulder milling with low radial and high axial engagement.
6. HPC face milling. First choice to clean up castings.
7. Dynamic/trochoidal slot milling.
8. Z-axis plunge milling.
9. Z-axis contour plunge milling.
10. Z-axis zig-zag slot plunge milling.

# VSM890™ -12

Victory™ Shoulder-Face Mills • VSM890-12 Series

## Best Practices

True 90° roughing tool with embedded finishing capabilities all in one tool.

Best-in-class wall finish with VSM890-12 in axial stepping-down jobs. For many shop floor setups, no additional finishing is required resulting in shorter machining time and lower tooling cost.

- Unstable setup.
- Low spindle power.
- High axial depth of cut  $A_{p1}$ .
- Low feed rate.
- Machining aluminium.
- Driven tools.

- Regular setup.
- Regular spindle power.
- Medium feed rate.

- Rigid setup.
- High spindle power.
- Low axial depth of cut  $A_{p1}$ .
- High feed rate.
- Boost productivity and cut into cycle time.

## Machining Stability

VICTORY™ X-FEED™

## NEXT LEVEL OF HIGH-FEED MILLING

## VXF™ -07 and VXF™ -12 Series

**VXF-07: Ap1 max: 0,9mm**  
**VXF-07: fz max: 2,0 mm/z**

**VXF-12: Ap1 max: 2,5mm**  
**VXF-12: fz max: 2,0 mm/z**

16.5° lead angle redistributes cutting forces in the spindle z-axis direction.

Feed rates up to 2,0 mm/z significantly reduce machining cycle times.

Optimised cutter body and chip gash design perfectly serves high-feed requirements.

PSTS inserts for powerful low cost per edge high-feed milling.

Cutters with internal coolant supply.

Nickel-plated surface protection.

**VXF** is a high-feed productivity booster designed to establish new industry standards with market-leading milling grades like WS40PM.

**WIDIA** 

widia.com

# VXF™ -07 and VXF™ -12

4-Edged, Victory™ X-Feed™ Mills

- 16.5° lead angle redistributes cutting forces in the spindle z-axis direction.
- Greatly reduces tool deflection and vibrations for improved tool life.
- Suitable for long tool reach.
- Unique integrated radial wiping facet to achieve a nice wall finish at pocket and helical interpolation milling.
- Durable cutting edges qualified to machine a wide range of materials.
- WS40PM — best-in-class milling grade for machining stainless steel and HTA.

Perfect combination of round and square insert style.

## Specifically engineered chipbreakers for powerful high-feed milling.

# WIDIA-HANITA™

## A SOLID FOUNDATION THE VARIMILL™ FAMILY

The WIDIA-Hanita VariMill family continues to provide leading-edge solutions for some of the most advanced applications in the general engineering, aerospace, and defense industries. These industries require complex machining techniques in some of the most exotic materials.

### VariMill I™

This 4-flute geometry is designed with unequal flute spacing for plunging, slotting, and profiling at the highest possible feed rates for a wide range of materials.

## VariMill II™

This 5-flute geometry is designed with unequal flute spacing for advanced milling jobs in a wide range of materials.

## VariMill III™

This 7-flute geometry is designed with unequal flute spacing and is designed to provide the highest Metal Removal Rates (MRR) and extended tool life in the most demanding materials in the aerospace industry.

**COMING SOON!**

See the entire VariMill™ platform in the 2019 VariMill Family Catalogue coming soon!

**WIDIA™ HANITA**

# 70NS

VICTORY™ X-FEED™

PRODUCTIVITY IMPROVED IN  
HIGH-FEED MILLING OF STAINLESS  
STEEL AND TITANIUM MATERIALS

**NEW!**

## 70NS Series

Designed for high-feed rates.

6 flutes and 3 x D diameter neck reach.

Designed for circular plunging and ramping, 3D machining, face milling, and pocketing applications.

Stainless steel and high-temp alloys.

Improved tool life due to reduced radial forces.

Larger radial engagement vs. standard ball nose end mills.

**5–10%**  
Radial engagement

**55%**  
Radial engagement

NOTE: YRC = distance from centre line to the crown of the R radius.  
 RCN = distance from centre line to the start of the cutting edge. This dimension can also help determine the minimum circle size when helical ramping.  
 R = the head radius size.  
 Re = the shoulder radius or radius at the corner of the cutter.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on diameters greater than 12mm.

# 4U50 & 4U80

AEROSPACE ROUGHING

**NEW!**

## 4U50

Shallow pitch rougher.

4–6 flutes with variable spacing.

Short length of cut and 3 x D diameter neck length.

Stainless steel and high-temp alloys.

Centre cutting.

## 4U80

Shallow pitch rougher.

4–6 flutes with variable spacing.

Regular length of cut.

Stainless steel and high-temp alloys.

Centre cutting.

4-FLUTE RADIUS END MILLS

THE EVOLUTION OF A SOLID  
CARBIDE END MILL REVOLUTION

## GP 4-Flute Radius End Mills

WIDIA-Hanita general purpose end mills offer plunging, slotting, and profiling for a wide range of materials and applications. Designed to provide high metal removal rates and excellent surface conditions at a value price. A wide range of diameters, lengths, and corner styles (such as chamfered, sharp edge, and ball nose) are available from stock.

### Radius Series — 4004/4014/4024

- Centre cutting.
- Steel, stainless steel, and cast iron.
- Radius corner for extended tool life.
- Regular, long, and extra long length of cut.

The WIDIA-Hanita™ solid carbide end mill product lines have built a strong ongoing reputation of continuous development and diversification.

## Platform

Standard cutter bodies in 3 x D, 5 x D, and 8 x D lengths.

Insert diameter range from 16mm up to 40mm.

One geometry and grade to cover steel and cast iron applications.

## Easy to Apply

Front clamping design. No need to disassemble the body from the holder to change insert.

Easy insert nomenclature logic to identify the targeted material group.

## Increased Stability and Performance

Highly engineered pocket seat design to ensure maximum stability, even in challenging applications like cross hole, inclined entry/exit, and interrupted cuts.

Suitable for high feed rates.

Flanged shank for higher rigidity.

Polished flutes for improved chip evacuation.

Brand new WP40PD grade for longer tool life in steel and cast iron applications.

**WIDIA™ TOP DRILL™ Modular X (TDMX)** is the ultimate choice for high-demanding drilling applications when stability and reliability are required.

**WIDIA** 

widia.com

# TDMX — TOP DRILL™ Modular X

Extra-Stable Modular Drill up to 40mm Diameter

- Augmented insert stability thanks to the highly engineered pocket seat design.
- Front clamping for an easy insert change, without disassembling the holder from the machine spindle.
- Diameter range from 16mm up to 40mm.
- L/D ratio of 3 x D, 5 x D, and 8 x D.

One geometry to cover two material groups in modular drilling.

PK

First choice for Steel and Cast Iron drilling.

## TDMX — Tube Sheet Drilling

NOTE: Through coolant recommended for greater than 3 x D applications.  
Material group M is recommended for secondary applications.

# TDMX — TOP DRILL™ Modular X

Modular Drill System • TDMX

## Assembling and Disassembling Instructions

### ▼ Assembly

#### 1 Insert positioning

#### 2 Insert clamping

Drill diameter	Torque
ø 16–19,999mm	1,5 Nm
ø 20–23,999mm	2,1 Nm
ø 24–27,999mm	3,0 Nm
ø 28–40,000mm	4,5 Nm

### ▼ Disassembly

#### 1 Clamping screw loosening

#### 2 Insert pushing out

#### 3 Further clamping screw loosening

#### 4 Insert removal

## TDMX Application Notes • Power and Coolant Requirements

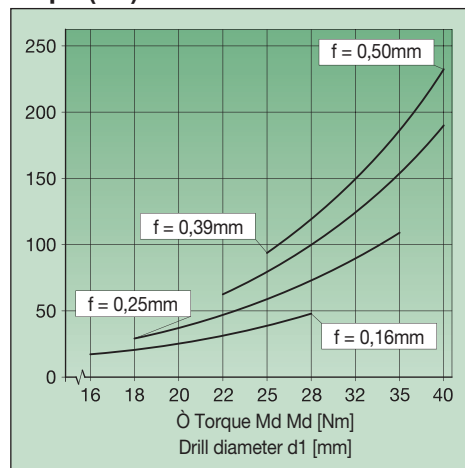

### Drive Power (kW)

### Feed Force (kN)

### Torque (Nm)

The following coolant pressure is recommended:

relative drilling depth	coolant pressure
1-3 x D	8 bars
5 x D	12 bars
7 x D	20 bars
10 x D	30 bars

SSC	diameter range D (mm)	L min. (mm)	L new (mm)
A	16-16.999	11.2	12.5
B	17-17.999	11.2	12.5
C	18-18.999	12.2	13.6
D	19-19.999	12.2	13.6
E	20-20.999	13.2	14.7
F	21-21.999	13.2	14.7
G	22-22.999	14.2	15.8
H	23-23.999	14.2	15.8
I	24-24.999	15.2	16.9
J	25-25.999	15.2	16.9
K	26-26.999	16.2	18
L	27-27.999	16.2	18
M	28-28.999	17.2	19.1
N	29-29.999	17.2	19.1
O	30-30.999	18.2	20.2
P	31-31.999	18.2	20.2
Q	32-33.999	20.1	22.3
R	34-35.999	20.1	22.3
S	36-37.999	22.1	24.5
T	38-40	22.1	24.5

NOTE: SSC = Pocket Seat Reference. To correspond with the SSC on the inserts.

NOTE: The diagrams above are used to determine the drive power, feed force, and torque. They are based on cutting force measurement in tempered steels in Cgr. 6. Tensile strength:  $R_m = 600 \text{ N/mm}^2$ . The base cutting speed used is:  $v_c = 80 \text{ m/min}$ .

# TOP CUT 4™

THE NEXT GENERATION  
OF INDEXABLE DRILLING

## One Comprehensive Platform

Standard diameter range covering 12–68mm  
in 2 x D, 3 x D, 4 x D, and 5 x D.

Four real cutting edges on each insert for entire platform.

Eight insert sizes to cover complete diameter range.

## Easy to Apply

No risk of mixing up inner and outer insert due to clear  
visual differences.

Easy-to-change inserts, laser marked with geometries and grades.

Easy-to-use nomenclature guide enabling the tool body and the  
related insert selection to avoid order failures.

## Highly Versatile

Breadth of application capabilities include through and cross holes,  
inclined entry and exit opportunity, 45° corner, half cylindrical,  
concave, or chain drilling.

Various geometries and grades available.

WIDIA™ Top Cut 4™ (TC4) portfolio is a broad offering for  
customers looking for a versatile indexable drilling platform.

**WIDIA** 

widia.com

# Top Cut 4™

## New Generation Indexable Drilling System

- 2x four true cutting edges.
- Cutting edge profile of central and periphery insert work together, leading to high stabilisation of the drill, preventing drifting of the tool even on irregular surfaces.
- X-offset design to adjust diameter size on turning machines and optimise tolerances on machining centres.
- Apply where speed and economy are prime considerations.
- Four grades to achieve higher tool life at accelerated speeds:
  - WU25CH grade for highest metal removal rate in general applications.
  - WU40PH grade for high toughness demands.
  - WPK10CH grade for high-speed applications.
  - WN10PH grade specific for aluminium and other non-ferrous materials.

### Chip Flute Exit

Steeper chip flute exit to reduce the overall length and increase rigidity.

### Coolant Channels

Enhanced coolant holes to get more lubrication at the cutting edge.

### SL Shank Style

Metric portfolio: shank sizes are 20mm, 25mm, 32mm, and 40mm, based on the cutting diameter for all the L/D ratios.

### Insert Positioning

Optimised insert positioning to achieve the maximum drill stability, hole tolerance and surface quality, above all in deep-drilling applications.

### Gash

Improved gash design on both insert pocket seats for a better chip evacuation.

## Top Cut 4 Inserts Expansion — Long Chip Materials — Non-Ferrous Materials.

-V34

**P K**

First choice for machining Steel, Cast Iron, and short chipping materials. Suitable for severe cutting conditions.

-V36

**P M K**

First choice for Stainless Steel. Suitable for deep drilling and where low power consumption is required.

-V36 WN10PH

**N**

First choice for Non-Ferrous materials.

-V38

**P M S**

Ideal for long chipping materials.

## New Generation Indexable Drilling System

### Top Cut 4™ Bodies Upgrade

Diameter 30mm, 4 x D example

Current

#### Gash

Optimised gash for improved chip flow and more precise insert pocket seat positioning.

# Top Cut 4™

Geometry and Grade Expansion for Augmented Versatility

## -V36 WN10PH for Non-Ferrous Materials

### Productivity

- Perfect combination of edge preparation and grade for aluminium machining.
- TiB<sub>2</sub> based coating specific for non-ferrous materials.
- Optimal chip control and no built-up edge, even in very soft aluminiums.

### Performance

- High cutting speed capability thanks to the state-of-the-art TiB<sub>2</sub> coating.
- The WN10PH grade geometry is available on the inboard insert, as well as on the outboard insert.
- Better general hole quality (surface and dimension) thanks to edge preparation and coating combination when compared to a standard universal insert.
- Longer and predictable tool life leads to avoiding the generation of built-up edge.

### Technical Details

- PSTS Inserts.
- Positive and sharp cutting edge.
- First choice for aluminium and others non-ferrous materials.
- Periphery insert with wiper land.

## Top Cut 4 Inserts Expansion — Non-Ferrous Materials.

-V36 WN10PH

N

First choice for Non-Ferrous materials.

## Hole Quality — Surface Finish

Diameter: 30mm 4 x D hole  
Material: GAISi 7 Mg

-V36 WN10PH

Standard multipurpose grade and geometry

## Geometry and Grade Expansion for Augmented Versatility

### -V38 Chipbreaker

#### Productivity

- Eliminates the formation of bird-nesting on the tool in long chip materials drilling.
- Improves the chip formation dramatically to guarantee a smooth chip flow.
- No machine stops due to bad chip evacuation on low carbon steels, stainless steels, and titanium — high process reliability.

#### Performance

- Larger feed rate window compared to the -V36 geometry when applied to low carbon steels and stainless steel.
- -V38 geometry is available on the inboard insert, as well as on the outboard insert.
- Better general hole quality (surface and dimension) thanks to the improved chip flow:
  - No drifting of the tool body causing deviation in the hole size.
  - No contact of the chips with the hole surface causing bad finishing.

#### Technical Details

- PSTS inserts.
- Special edge geometry for more effective chipbreaking action.
- First choice for low carbon steel, stainless steel, and super alloys.
- Periphery insert with wiper land.

#### -V38 Chipbreaker Application Areas

The new -V38 geometry is the first choice when:

- The drilling application with Top Cut 4™ platform bodies and inserts is applied to:
  - Low carbon steel (typically P0 and P1).
  - Stainless steels, such as AISI304, AISI316, and similar materials.
  - Titanium alloys, like Grade 2 and Grade 5.
- Bird-nesting on the tool body is an issue.
- Vibrations are generated due to a bad chip flow. Chip can't evacuate from the hole and generates big noise during machining.
- Bad surface quality caused by the chip in contact with the hole.
- Bigger hole size. Bad chip flow can generate tool drifting.
- Lower power consumption and less torque are needed.

#### Top Cut 4 Inserts Expansion — Long Chip Materials.

**P M S**

Ideal for long chip materials.

NOTE: Drilling in stacked plates possible in certain applications. Ask for technical support.

Drill shipped with insert screws and Torx wrench.

See pages 60–63 for inserts.

SSC = Pocket Seat Reference.

SLR = Side Lock.

D1 max is an achievable diameter using x-offset.

D	LS
20,00	50
25,00	56
32,00	60
40,00	70

**WARNING**

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

**WARNING**

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

NOTE: All speed conditions are for stable conditions. For unstable conditions, it is suggested to reduce starting speeds by 10%. For interrupted cuts, reduce by 20%.  
 For 4 x D, it is highly recommended to start with feed and speed values reduced by 10% less than above data.  
 For 5 x D, diameter range 12–23,99mm (insert sizes A to C), it is highly recommended to start with feed and speed values reduced by 20% less than above data.  
 For 5 x D, diameter range 25–68mm (inserts sizes D to H), it is highly recommended to start with feed and speed values reduced by 15% less than above data.  
 For 4 x D and 5 x D, it is recommended to reduce feed rate during entry and exit by 30–50%.

# Designed to Make Your Workplace More Productive

## WIDIA™ X-Feed™

WIDIA-branded X-Feed tooling was created as an application-specific portfolio to remove as much material as possible in the shortest amount of time, using a shallow depth of cut to achieve higher MRR and boost productivity.

FEED

HIGH-FEED MILLING

BOOST PRODUCTIVITY

### Victory™ X-Feed For Machining Stainless Steel and Titanium

#### 70NS Series

Designed for circular plunging and ramping, 3D machining, face milling, and pocketing applications.

### Victory X-Feed To Speed Up High-Feed Machining

#### VXF™ -7 and VXF™ -12 Series

VXF is a high-feed productivity booster designed to establish new industry standards with market-leading milling grades like WS40PM.

# WGC

THE MOST VERSATILE TOOL ON THE MARKET IN GROOVING, PROFILING, AND CUT-OFF OPERATIONS

## 4 BENEFITS IN 1

### VERSATILE

GROOVING, PROFILING,  
AND CUT-OFF OPERATIONS

### SIMPLE

EASY TO SELECT  
AND APPLY

### STABLE

TRIPLE-V SEATING FOR  
SECURE CLAMPING

### PRODUCTIVE

LOW CUTTING FORCES IN  
THROUGH COOLANT FOR  
BETTER CHIP EVACUATION

## Grooving

First choice for external grooving applications in most workpiece materials.

Through coolant capability and efficient coolant delivery for enhanced productivity.

Available in integral and modular style toolholders.

**Groove width:** 2–10mm.

## Cut-Off

Specially engineered chipbreakers for effective parting/cut-off and deep grooving.

Positive geometry for lower forces.

Secure seating offers greatest stability.

**Groove width:** 1,4–8mm.

## Profiling

Full radius chipbreaker for multi-directional turning and generating complex profiles.

Rigid design ensures smooth surface finish.

**Groove width:** 3–8mm.

### WU25PT™

Advanced Universal Grade with Hard PVD AlTiN Coating and Fine-Grain Substrate

This new and improved coating improves edge stability with wide range speed and feed capabilities.

The WU25PT grade is ideal for general machining of most steels, stainless steels, high-temp alloys, titanium, irons, and non-ferrous materials in a wide range of speeds and feeds with improved edge toughness for interrupted cuts and high feed rates.

For more information, visit [widia.com](http://widia.com).

NOTE: FIRST choice starting speeds are in **bold** type.  
As the average chip thickness increases, the speed should be decreased.

### Internal Coolant Delivery

#### Geometry placement is a key factor to coolant delivery!

Engineers positioned WGC geometry in the perfect position to spread the coolant across the cutting edge for maximum performance.

#### Coolant parameters

WGC is capable of both low and high pressure coolant up 350 bar (5076 psi) with no lower limit.

Tech Tip — If performance is not being achieved due to the machine pump's inability to provide pressure, even if volume is acceptable, flood coolant should also be applied.

#### Performance

Internal tests have shown up to 30% increased tool life.

Tech Tip — Regular maintenance of coolant filtration system required to achieve maximum performance.

#### Coolant entry

WGC offers multiple coolant ports for convenience.

6475043	M8X1-BAN-JIC-HOSE-200	Flexible braided 200mm Coolant hose, M8 x 1.0 male thread to JIC female thread. Contains (1) M8x1.0 banjo bolt and (2) M8 bonded washers
6475045	G18-BAN-JIC-HOSE-200	Flexible braided 200mm Coolant hose, G 1/8 male thread to JIC female thread. Contains (1) G 1/8 banjo bolt and (2) G 1/8 bonded washers
6475047	M8X1-BAN-JIC-HOSE-300	Flexible braided 300mm Coolant hose, M8 x 1.0 male thread to JIC female thread. Contains (1) M8x1.0 banjo bolt and (2) M8 bonded washers
6475049	G18-BAN-JIC-HOSE-300	Flexible braided 300mm Coolant hose, G 1/8 male thread to JIC female thread. Contains (1) G 1/8 banjo bolt and (2) G 1/8 bonded washers

### ▼ Coolant Accessories

The items shown below are not part of any coolant kits shown on previous pages.

order number	catalogue number	description
6145382	M6X1-JIC	Straight fitting, M6 x 1.0 male thread to JIC male thread
6145383	JICM-JICM-STR	Straight fitting, JIC male thread to JIC male thread
6145386	G14-G18-RED	Straight fitting, G 1/4 male thread to G 1/8th male thread
6475058	R18-JIC	Straight fitting, 1/8 BSPT male thread to JIC male thread
6475059	R14-JIC	Straight fitting, 1/4 BSPT male thread to JIC male thread

### ▼ Coolant Spare Parts

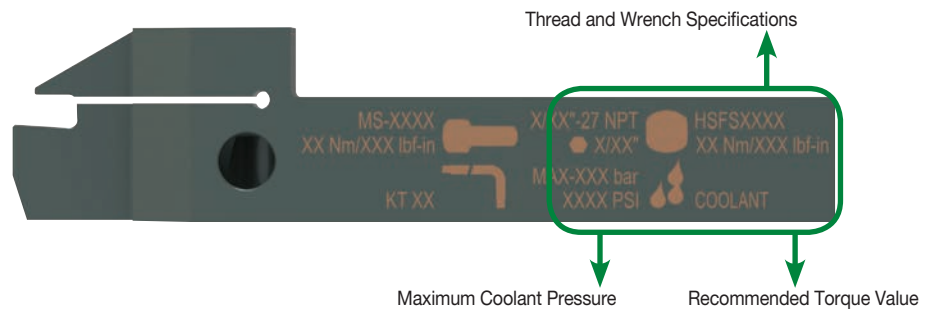

Included in kits; part of components.

order number	catalogue number	description
6475051	M8X1-BAN-BOLT	Banjo bolt, M8 x 1.0 male thread
6475053	G18-BAN-BOLT	Banjo bolt, G1/8 male thread
6475060	M6-BON-WASHER	M6 bonded washer
6475055	M8-BON-WASHER	M8 bonded washer
6475061	M10-BON-WASHER	M10 bonded washer
6475056	G18-BON-WASHER	G 1/8 bonded washer

## WGC Application Guidelines

### Internal Coolant Delivery Guidelines

1. WGC system capable of 5076 psi (350 bar).
2. Toolholder delivered with four entry holes.
3. A quality filtration system is necessary to prevent blockages in the toolholder that will affect coolant flow and performance.
4. Machines without a proper filtering system may require modification or an inline filter.
  - For pressure >1015 psi [70 bar], use 10–20 µm filter.
  - For pressure <1015 psi [70 bar], 50–100 µm.
  - Using fine filters in low-pressure applications may affect flow rate.

### General Safety Guidelines

1. All safety doors and mechanisms must be in place before trying out the internal coolant to avoid any danger to the operator in the event of a failure.
2. Use the correct pipe fittings to connect the holders to the system. Ensure the maximum pressure recommended for the fittings are not exceeded.
3. While implementing pressure >1160 psi [80 bar], increase the pressure in steps to ensure proper functioning of insert clamping and leak-free joints.
4. While indexing inserts, ensure the pocket is free from chips and/or dirt. Also, inspect the insert and make sure there are no blockages in the coolant canal.
5. Periodically check all hoses and fittings for damage and wear for proper functioning of the system. This check should also include filters.

### Internal Coolant Delivery Performance

Internal coolant offers a clear advantage in tool life and chip forming/evacuation vs. external coolant in difficult conditions and in high-pressure coolant.

*Example: Chipbreaking in plunging of steel.*

Flood Coolant

Material steel ST52;  
Insert size 6mm; f = 0,25 mm/U

Internal Coolant

1,087 psi  
(75 bar)

2,900 psi  
(200 bar)

**Low Pressure** — If performance is at risk due to low coolant pressure, apply internal coolant in combination with external coolant to increase volume.

**Recommendation to improve tool life and/or productivity:** Apply high pressure coolant: 80–350 bar recommended.

### VDI Assemblies

The WGC internal coolant delivery can be leveraged with VDI holding systems with both traditional or Quick-Change coolant connections.

# Customer Application Support (CAS)

## Get fast and reliable answers to your toughest metalcutting problems.

Our Customer Application Support (CAS) Team is the metalworking industry's leading help desk resource for tooling application solutions and problem resolution.

- Easy access to proven metalworking expertise.
- Service level excellence.
- Best-in-class application support tools and technology.

## Easy access to proven metalworking expertise!

WIDIA™ Customer Application Engineers assist customers and engineering groups throughout the world with expert tool selection and application recommendations for the entire range of WIDIA tooling.

### Service Level Excellence:

- Fast telephone response.
- Quick technical solutions.
- Efficient case management.

### Services Provided:

- Tooling selection.
- Operating parameters.
- Troubleshooting.
- Process optimisation.
- Hardware support.

### Best-in-Class Support Tools and Technology:

- Tooling performance experts.
- Materials database.
- Application calculators.

## PRODUCT DATA

- Tooling Dimensional Data
- Feeds and Speeds
- Inventory Availability
- ...and More!

## ELECTRONIC CATALOGUE

- Complete cutting tool assortment, cutting data, and 2D/3D models.
- Build cutting tool assemblies for easy import into CAD/CAM software, pre-setters, and tool management systems.

## PARTNER RESOURCES

- News and updates about our products and services.
- Partner Resources — training, product sheets, marketing templates, campaign collateral, emails, branding elements, merchandise, upcoming webinars, etc.

DOWNLOAD THE WIDIA MOBILE APPS TODAY!

# The NOVO™ Application Provides the Digital Power

To Get Information Quicker  
Than Ever Before.

## New for 2018 — Export Compatibility to Mastercam®

- Select tools, save into “job lists”.
- Interactive feed & speed calculators.
- Find inventory availability.
- Download 2-D and 3-D models.
- Easy interface with many CAM and tool management data systems.

# Find your Local WIDIA Authorised Distributor

WIDIA™ brand cutting tools are available exclusively through a specialised network of Authorised Distributor partners whom you can count on to deliver much more than products. Our distributors know us, and more importantly, they know you. They know better than anyone in the industry how to put the global power of WIDIA to work for you — in your industry, in your region, and for your business.

WIDIA distributor partners provide technical expertise that you can count on. They will show you how to:

- Significantly reduce cycle time.
- Improve machine tool utilisation.
- Achieve measurable productivity improvements.
- Take advantage of proven supply chain solutions.
- Access local inventory and best-in-class technical support.
- Request onsite demonstrations of the latest tooling technology.

And with thousands of turning, milling, holemaking, tapping, and tooling systems products available from WIDIA, you'll find everything you need from one single source.

Find your Local WIDIA Authorised Distributor by accessing our distributor finder at [widia.com](http://widia.com).

## IMPORTANT SAFETY INSTRUCTIONS: READ BEFORE USING THE TOOLS IN THIS CATALOGUE

# METALCUTTING SAFETY

### Projectile and Fragmentation Hazards

Modern metalcutting operations involve high spindle and cutter speeds and high temperatures and cutting forces. Hot metal chips may fly off the workpiece during metalcutting. Although cutting tools are designed and manufactured to withstand high cutting forces and temperatures, they can sometimes fragment, particularly if they are subjected to over-stress, severe impact, or other abuse.

To avoid injury:

- Always wear appropriate personal protective equipment, including safety goggles, when operating metalcutting machines or working nearby.
- Always make sure all machine guards are in place.

### Breathing and Skin Contact Hazards

Grinding carbide or other advanced cutting tool materials produces dust or mist containing metallic particles. Breathing this dust or mist — especially over an extended period — can cause temporary or permanent lung disease or make existing medical conditions worse. Contact with this dust or mist can irritate eyes, skin, and mucous membranes and may make existing skin conditions worse.

To avoid injury:

- Always wear breathing protection and safety goggles when grinding.
- Provide ventilation control and collect and properly dispose of dust, mist, or sludge from grinding.
- Avoid skin contact with dust or mist.

For more information, read the applicable Material Safety Data Sheet provided by WIDIA and consult General Industry Safety and Health Regulations, Part 1910, Title 29 of the Code of Federal Regulations.

These safety instructions are general guidelines. Many variables affect machining operations. It is impossible to cover every specific situation. The technical information included in this catalogue and recommendations on machining practices may not apply to your particular operation.

For more information, consult the WIDIA Metalcutting Safety booklet, available free from WIDIA at +1 724 539 5747 or fax +1 724 539 5439. For specific product safety and environmental questions, contact our Corporate Environmental Health and Safety Office at +1 724 539 5066 or fax +1 724 539 5372.
