

Working principle:

As per studies on spectral characters, the orange light with wavelength of 580-590nm has function in expelling mosquitoes, also not attractive to photogenic insects such as moths and termites, avoiding flying insects gathering. The light waves emitting by mosquito-repelling LED tube is beneficial to human eyes and it can achieve physical mosquito repellent effect.

Advantages:

1. It has a repellent effect on mosquitoes but a environment-friendly product.
2. It can avoid flying insects gathering.
3. No chemical or ultraviolet radiation, more safety and healthy.
4. Special allocation of spectrum, extremely low blue light avoiding blue light hazard.

Applications:

Living room, balcony, doorway, garden and etc.

Code	Voltage	Power (W)	Lumen(lm)	Beam angle	Base	Size (mm)	Life (hrs)
