ECO-SYSTEM

Our Eco-System comprises of all constructive and technical installations that use the system to extract smoke and dust particles.

Its commonly installed and applied in industrial-scale operations where considerable amounts of pollutants are generated and also mainly installed to promote safe and healthy work environment.

The application of Eco-System is based on client's requirement and installation flexibility at the actual site.

Our Eco-System made up of:

- i) Smoke Extraction System (SES)
- ii) Multi-Cyclone System (MCS)

Without ECO-SYSTEM

Unsafe and unhealthy working environment
with smoke/ dust particle

With ECO-SYSTEM

Safe and healthy working environment

Greenable Today Desirable Future

SMOKE EXTRACTION SYSTEM (SES)

From Press to Ducting Pipe

Ducting Pipe to Cyclone

Cyclone, Air Lock to Chimney

Another Option Installation of Chimney

From Cyclone to Chimney

MULTI-CYCLONE SYSTEM (MCS)

In coal fired boilers the flue gases have certain particles of solid matter in suspension, this is called smoke or dust. Any dust particles leaving into chimney exhaust are objectionable and harmful for the health of human being and for plant life.

Therefore, the introduction of our Multi-Cyclone System is to clean the gas from dust, smoke, or cinder particles before it is to be discharged from the chimney.

Our Multi-Cyclone System can be further divided into 2 parts which are:

- i) Cyclotech™
- ii) Cycletro™
