

CROWN PREPARATION

Teeth need to be prepared for crowns in order to make sure the new crown will sit in the correct position and fit perfectly around the entire periphery of the tooth (marginal fit)

Burs and kits recommended

[Predator Accu Prep Procedure Kit \(Carbide\)](#)

This Procedure Kit offers a fast and smooth cutting alternative to diamond burs for crown and bridge preparation. The Predator Accu-Prep kit allows complete bulk reduction and smooth margin definition with a single instrument. *See Predator Accu Prep bur.

“As a clinician, when preparing teeth for crowns, having a selection of burs which are both sharp and efficient is imperative. Often we are working in difficult to access areas therefore having instruments which can make the desired preparation in as few passes as possible is really important. The crown preparation kits from Prima Dental are brilliant not only as a fantastic selection of burs for any type of preparation, but also to store safely and make the re-ordering process nice and simple.”
