Little Giant Ladder Systems

Little Giant Ladder Systems is the innovation leader in the ladder industry. Little Giant manufactures and distributes superior-quality ladders and accessories to discerning homeowners and professionals throughout the world. The company's growing family of consumer products includes Little Giant Ladders®, SumoStance™, Select Step™, and MicroBurst™.

Brands and Registered Trademarks

GS-07F-01641

COMPANY HISTORY

In the 1970s, Little Giant Ladder Systems chairman and founder, Harold "Hal" Wing, met a German painter who had an interesting idea and a primitive prototype of a new kind of ladder. Hal enhanced the ladder and engineered what is now known as the strongest, safest, most versatile ladder in the world—the Little Giant Ladder System. This professional-grade, multi-use ladder can be set up in 24 different positions and is probably the most famous ladder in the world. Hal performed demonstrations of the ladder nationwide at state fairs and trade shows, building and packaging orders out of his garage. Working side-by-side with his wife Brigitte and their seven children, Hal built the company on a foundation of quality and innovation. Gradually, both do-it-yourselfers and professionals all over the world have come to understand the Little Giant Ladder System is the best ladder in the world.

In 2003, Little Giant Ladder Systems' sales skyrocketed after the launch of an infomercial starring Hal Wing. Instead of painting a gimmicky picture, the infomercial clearly and concisely represented the ladder's benefits, forever establishing the Little Giant brand and its products as a household name. From its humble beginning, Little Giant Ladder Systems is now one of the world's largest manufacturers of ladders, supplying products to discerning homeowners and professionals all over the world.

World Headquarters, Springville, Utah, USA

2,000 : 100 : 1
EACH ONE MATTERS

Every day, 2,000 people are injured while using a ladder.

Every day, 100 people suffer a long-term or permanent disability.

And every day, one person will die.

It is up to us to change these statistics, one person at a time. Working together with you, we can do it!

SOLUTIONS
TO THE
MOST COMMON
LADDER
PROBLEMS

Using the Wrong Size Stepladder

Using the wrong size of ladder is one of the leading causes of ladder accidents. Operators will often reach a little too far or step a little too high rather than climb down and look for an appropriate ladder. Most operators will break OSHA and ANSI rules by standing on the top rung or top cap of a stepladder, which often puts them in an unstable, unsafe position.

Always Have the Right Size

The Select Step™ offers multiple solutions in one, easy-to-adapt model, thereby eliminating the need for several types and sizes of ladders on the jobsite. Little Giant® removed the top rung, which was really only a sticker holder, and, thus prevented operators from accessing the top cap at all. Operators can quickly adjust the Select Step to the proper height. The Select Step is several stepladders in one, providing users with right size of ladder for every job in one lightweight, type IAA – 375 lb rated stepladder. The Select Step also provides a comfortable standing platform that offers heel-to-toe foot support at the top recommended step.

SOLUTION TO:
WRONG SIZE
 OF STEPLADDER

SOLUTION TO:
HANDLING INJURIES
 CARRYING HEAVY EQUIPMENT

Strains and Sprains

Handling injuries to the neck, back, shoulders, and legs account for the majority of ladder-related incidents and commonly carry an average total cost of at least \$75,000 in lost time, medical, and workers compensation expenses. These injuries occur when operators carry, lift, or load and unload heavy traditional ladders.

Wheels on a Ladder?

Little Giant Ladders make several fiberglass multi-use stepladders with a very compact storage size, which removes the need to transport the ladder on an overhead truck or van rack, eliminating the risk of strains or sprains while loading and unloading. Tip & Glide™ Wheels remove the need to carry the ladder from place to place, reducing the incidence of handling injuries.

SUMOSTANCE

SOLUTION TO:
OVER-REACHING
ON A LADDER

SELECT STEP

SOLUTION TO:
FACING YOUR WORK
ON A STEPLADDER

Twisting and Straddling on a Stepladder

By nature of their design, traditional stepladders take you farther from your work the higher you climb them. To counteract this effect, most operators turn the stepladder sideways to get close to their work surface. Although this gets the operator closer, it also can result in the operator twisting his body or straddling the ladder unsafely. In many cases, this practice results in the operator accidentally pushing the ladder away from the work surface, destabilizing the ladder, which can result in a serious fall.

Face Your Work

The Little Giant Select Step is one of several Little Giant safety products that allows the operator to use the ladder in the 90-degree position, which allows the operator to face the work surface with his feet on a solid rung and to apply force from a much more stable foundation.

Over-Reaching Causes the Worst Falls

Over-reaching is an all-too common problem with any kind of ladder—stepladder, extension, or multi-use. It is human nature to overreach rather than climb down and reset the ladder. Even a mild overreach can easily shift the operator's weight outside an ordinary ladder's center of gravity. Once the operator is outside the center of gravity, it takes very little for the ladder to destabilize, causing the operator and the ladder to fall. These falls, especially falls from extension ladders, are the leading cause of ladder-related fatalities.

Train and Protect Operators

Training operators not to over-reach is important, but in reality, in most cases human nature will take over and operators will over-reach. The Little Giant SumoStance™ features leveling outriggers that double the base footprint of the ladder so the operator cannot feasibly reach outside the ladder's base footprint. Load testing has shown that the SumoStance outriggers increase the ladder's side-tip stability up to 600 percent.

Complying with 3 Points of Contact

OSHA requires operators to maintain three points of contact with a ladder while ascending and descending. Many safety professionals take it a step farther to require operators to maintain three points of contact, use fall protection, or work in a guardrail-enclosed platform or scaffold while working at height. In many cases, operators find it difficult and even impossible to comply with these rules and keep production going at an efficient rate.

Aerial Safety Cage™ Meets the Standard

The Aerial Safety Cage's guardrail system and large, stable working area prevent over-reaching and allow operators to work in full compliance without a fall protection system. The Cage's mobility and adjustability also make it quick and easy to move and adapt to each new task, and to do it safely. The Cage is a much faster, more efficient, and cost-effective solution than a powered lift or scaffold system.

SOLUTION TO:
3 POINTS
OF CONTACT

SOLUTION TO:
UNLEVEL
GROUND

Ladders and Uneven Ground Don't Mix

Few job sites are perfectly level. To save time, operators often improvise unapproved leveling methods like bricks, boards, or rocks that are inherently unstable and unsafe. And even slightly uneven ground can be very dangerous. On an ordinary 28-foot ladder, 1-inch out of level at the base puts you 19 inches off center at the top, putting the operator completely outside the footprint of the ladder. Even if he doesn't over-reach (which he will probably do), it takes very little force to destabilize the ladder when you're that far off center. This kind of situation often leads to the most catastrophic falls.

Adjust the Ladder to Nearly Any Surface

Ratcheting outriggers on each side provide the Little Giant Sumo- Stance extension ladder with a full 9" of vertical adjustment in 1/8 inch increments for use on sloping or uneven ground. Built-in bubble levels help operators keep the rungs level and the ladder at the proper lean angle. Patented SumoStance outriggers double the ladder's base width, increasing side-tip stability by over 600%.

CAGE™

GOES WHERE A MECHANICAL LIFT OR ORDINARY STEPLADDER CANNOT GO

Secure and Stable

Unlike most lightweight, compact platform stepladders, which are usually engineered for light residential use, the Little Giant AirWing Fiberglass is engineered to be a safe, highly mobile platform option for tradesmen and working professionals. The lightweight, non-conductive AirWing opens easily from a 3" storage profile, yet its patent pending pivoting steps offer comfortable 4.5-inch treads on each rung, with a very spacious, comfortable standing platform at the top. With a lightweight, slim profile and special duty construction (ANSI Type IAA - 375 lb rating), the AirWing is the perfect safe yet portable climbing solution for any jobsite.

LADDER SAFETY TRAINING

Little Giant Ladder Systems is a member of the American Ladder Institute (ALI), a national trade association whose mission is to inform the public on the proper selection, care and safe use of ladders.

ALI has developed an online ladder safety training certification program available on: www.laddersafetytraining.org. This program is built for audiences, from professionals who work in the DIY and industrial trades to consumers.

Dave Francis

Ladder Safety Hub

Dave Francis has been in the ladder business for over thirty years. As a college student he cleaned the offices of Little Giant Ladder Systems at night and has stayed with the company ever since. Working his way up the ladder (pun intended), Dave became the Director of R&D and holds five U.S. patents for improvements in ladder design. He is now the National Safety Director, with the specific mission of preventing ladder accidents and hopefully saving lives by promoting ladder safety training and innovations in safe ladder design. His goal is the same as yours, getting everyone home to their families at the end of the day. If you are interested in ladder safety training, please contact Dave at:
