

## Power Logger DFR

## Designed for Your Needs

The Power Logger DFR, a fully featured digital fault recorder embedded with PQZIP technology, is a distributed multi-functional data acquisition device that continuously records all waveform signals at a sampling rate of 1,024 Sample/ Cycle. The continuous waveform recording makes the Power Logger DFR ideal for monitoring, protecting, operating, power quality, synchro phasors and load profiles. The Power Logger DFR modular design allows expending the system to almost any application in order to offer a cost effective performance. When coupled with PQE PQSCADA Sapphire - multi-vendors support power management software- the Power Logger DFR provides a powerful platform for acquisition, analysis and report of data from power system substations.

#### Multi-Functional

- Digital Fault Recorder (DFR)
- Phasor Measurement Unit (PMU)
   Power Quality Monitoring (PQM)
- Sequence of Event Recording (SER)
- Dynamic System Monitoring (DSM)
- Impedance based Fault Location (IbFL)
- Energy Billing Measurement (EBM)

#### **Features**

- 24-Bit Continuous acquisition at 1,024 sample
- per cycle[50/60Hz]
- Modular Design
- Centralized and decentralized architecture
- Supreme synchronization <0.1 µsec on any channel
- 7" touch LCD Display
- · Comprehensive web interface
- Scalable architecture
- Complies with IEC 61850 MMS, GOOSE
- messaging and sample value

#### **PQZIP Compression Technology**

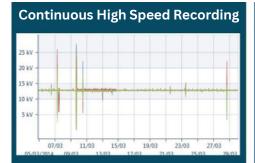

The PQZIP Patent compression algorithm enables the DFR to store continuously waveform signals over a long period of time, whether or not an event of interest was identified. This technology is unique to PQE and ensures precise and accurate characterization of electrical system dynamics.

#### **PQZIP Compression features:**

- Continuous waveform recording
- Supreme Trend Resolution
- Extended Harmonic Recording
- Threshold free setup
- Easy deployment

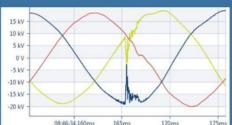

Parameter	Resolution
Waveform	20µsec
RMS	½ Cycle
THD	½ Cycle
TDD	½ Cycle
Unbalance	½ Cycle
K Factor	½ Cycle
Crest Factor	½ Cycle
Powers	1 Cycle
Harmonics	1 Cycle
Frequency	1 Cycle

## **Accurate Results**

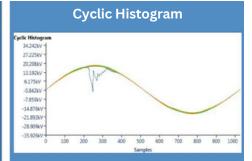

The Power Logger G5DFR measures and records 10,000 power parameters continuously at ½ cycle resolution.

#### **Continuous Waveform Recording**

- Continuously samples & records waveform signals at 1,024 S/C
- Threshold free setup 24 bit converter yield superior accuracy Waveform resolution
- Waveform capture of up-to 8kVPk

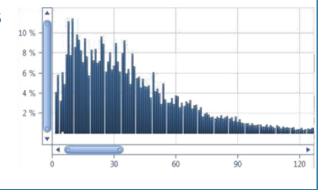

Shows overlaid voltage waveform cycles for a selected time range and deviation from the expected ideal waveform by overlaying Millions of waveforms cycles.

### **Harmonics & Inter-harmonics Analysis**

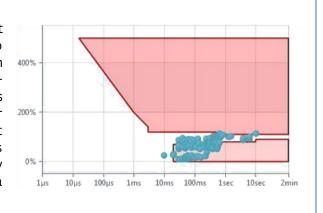

Power Logger has 2 FFT engines for harmonics analysis:

- Cycle by Cycle: performs FFT at 1 cycle resolution for extended bandwidth. This engine provides 512 harmonics order at 50Hz/60Hz resolution.
- 10/12 Cycles: performs FFT at 10/12 cycles resolution for extended resolution and sub-grouping calculation. This engine provides the magnitude and angle of 1,024 spectrum components at 5Hz resolution.

### **Comprehensive Event Mechanism**

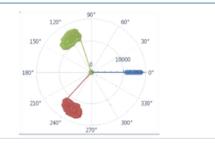

The Power Logger G5 DFR is designed to detect any event occur- ing on your system. The event mechanism allows to configure events on any measured parameter (more than 10,000) and/or I/O ports. The event mechanism supports out-of-limit events, rate of changed limits and short transient as well as notches events on the waveform. As the Power Logger G5DFR records the waveform signals continuously, the event configuration will not trigger the recording but stores summary logs including start and end time, duration, severity and magnitude of the event. All events can be displayed in a tabular or scatter charts as CBEMA/ITIC.

### **Phasor Analysis**

Phase angle between voltage and current channels are logged continuously at 1 cycle resolution.

The Phasor chart displays the phase angled over time.

## Discover

## **Outstanding Features**

#### **Web Interface**

The Power Logger G5DFR is equipped with a fully web server using HTML5 web technology. It allows interfacing with any web-enabled device using most web browsers. Access to the web interface is secured with a user name and password. The web interface is used for the configuration and monitoring. The Power Logger G5DFR web interface includes 2 main modules:

- Overview: Shows at a glance a full status of measurements and system statuses
- Investigation: The Investigation module shows graphs of trends, histograms, events lists, summary tables, and statistical summaries of all stored parameters. It allows the user to analyze voltage sags/dips, swells, interruptions, and any other incident. Each investigation includes multiple charts.

#### LCD

The Power Logger G5DFR is equipped with a 7" high resolution touch screen display along with led backlight and 1.100 000 colors.

#### Communication

The Power Logger G5DFR rear panel is equipped with

- 2 SFP Ethernet ports for communication to either two separate networks or for redundant communications. The SFP is a hot-swappable input/output device allowing multiple options of connectivity.
- 2 USB ports extend the DFR wireless communication capabilities by connecting standard USB communication sticks.
- 1 serial RS232 port

Additional Ethernet, serial and USB ports can be added to the front panel for use by field technicians.

4x 2x 2x USB SFP Seria

#### **Power Quality**

The Power Logger G5DFR provides a comprehensive power quality module; that fully complies with IEC 61000-4-30 class A, for analysis and presentation. Power quality measurements available include:

- Harmonics recording: Complies with IEC 61000-4-7, the harmonic recording is available for all 32 virtual channels. 100 harmonics and 100 interharmonics subgroup quantities per channels can be recorded at a resolution of 10/12 cycles, 150/180 cycles, 1min and 10min continuously.
- PQ Events: Complies with IEC 61000-4-30 Class
   A. The power quality module can detect voltage sags (dips), swells, interruptions, and rapid voltage changes for all 32 virtual channels. The PQ module includes event aggregation for poly-phase system support.
- Flicker recording: Complies with IEC 61000-4-15. All power quality parameters are continuously logged-in at ½ cycles, 150/180 cycles, 10min and 2 hours resolution for up-to 1 year.

10k 1k 512 parameters samples harmonics

#### **Energy Meter**

The Power Logger G5DFR is equipped with a high precision 4 quadrat energy meter with 0.1% accuracy in power & energy.

#### **Fault Location**

The Power Logger G5DFR is equipped with a one and two-terminal impedance-based distance to fault calculation algorithm.

The accurate results increase the network reliability and availability by:

- Reducing aerial patrol costs
- Preventing reoccurring faults
- Reducing power quality impact of 'preventable faults'
- Reduceing cost of regulatory fines due to power outage Detect faults:
- Three-phase short circuit
- Two-phase short circuit
- Two-phase short circuit to ground
- Single-phase short circuit to ground
- Single-phase open wire

#### **PMU**

- Complies with the most updated standard for synchro-phasor measurements of power systems IEEE C37.118-2011, including the amendment IEEE C37.118.1a-2014
- Two independent synchrophasor data streams enable to report a synchrophasor data with two different report-rates and/or different performance classes (P/M) and/or data type simultaneously.
- Ultra-fast report rate for both P & M classes.

Performance Class	Max report rate for 50Hz	Max report rate for 60Hz
Р	200/sec	240/sec
М	100/sec	120/sec

- Phasor measurement reporting function for up to 32 phasors on each data stream.
- Streaming of any of the 10,000 calculated analog data parameters is available via the PMU protocol, eliminating the need to calculate power parameter in the PDC or anywhere else.
- Analog data streaming also include streaming of mili-Amp input signals for control purposes. There is no need to use any other means to transfer transducer's signals
- Support for simultaneous synchrophasor data stream over TCP/IP and UDP/IP. It can be configured for unicast or multicast, enabling a better design of WAMS communication and suitable for WAMS with several utilities or applications involved.

#### **Time Synchronization**

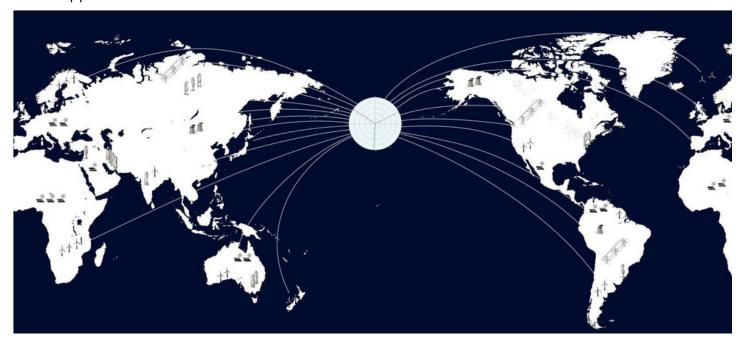

The Power Logger DFR's synchronization algorithm is based on several sources with an automatic hierarchy for the preferred source availability (accuracy based hi-erarchy). The main time source serves as the primary/external time synchronization source while the alter-native time sources are used as the secondary time source in case the primary source fails. The Table be-low outlines the accuracy of the Power Logger G5DFR's individual time

sources.

Time Source	Accuracy
Internal Clock	±10ppm
NTP	100µsec
GPS/IRIG B	0.5µsec
DSP Sync	0.1µsec

Standard synchronization methods such as GPS, IRIG- B, NTP, etc., synchronize the time stamp of the signal. However in a power quality application in general, and especially in continuous waveform recordings, the sampling frequency between devices must synchronized as well. PQE's propriety time synchronization algorithm is a cost effective, high performance technology, which is able to achieving simultaneous synchronized sampling from hundreds of channels in a decentralized redundant architecture.

Each individual POWER LOGGER G5DFR acts as a Sync Master, and therefore can be used as a time reference to other units at a time accuracy of 50-100nsec.

# **PQSCADA Sapphire**

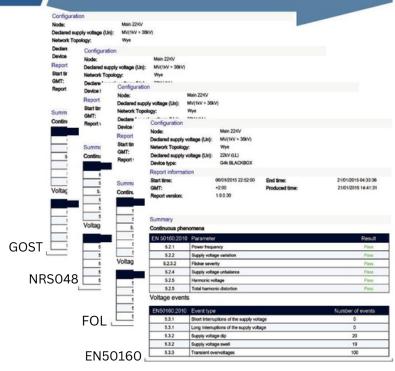

## **Accurate Data Anywhere, Anytime**

PQSCADA Sapphire is a comprehensive, yet easy to use, analysis and engineering software designed to manage and monitor power quality analyzers, digital fault recorders, revenues meters and other IED. The PQSCADA Sapphire Express edition is complimentary with all PQE devices.

#### **Features**

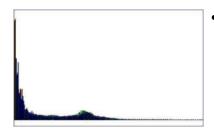

- Easily read COMTRADE, PQDIF & PQZIP files
- Comprehensive power quality module Geographical map view\*
- Automatic power quality report for EN50160, IEEE1159, FOL, GOST.
   Configurable report module to design your own report template
- Power quality grid line code configuration Export to Excel, word, JPG & PDF
- API to Matlab for advanced post processing analysis\*
- Export data to COMTRADE, PQDIF, Excel &
- CSV
- Multiple Site investigation

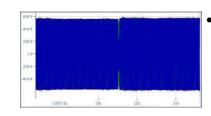

\* Available on the Enterprise & Professional versions only

## **PQSCADA Sapphire**

## **Extensive Charts Capabilities**

 Spectrum chart: View selected parameters for selected time range in a bar graph. This allows viewing and investigating frequency domain phenomenon.

 Trend chart: view electrical parameters for a selected time range as one or more graphs

selected parameters for a selected time range. It shows two sub charts: a "relative chart" and a "cumulative chart".

Scatter Event chart:
 View events for a
 selected time range
 according to standards
 or custom definition
 (such as CBEMA)

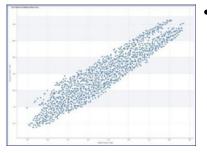

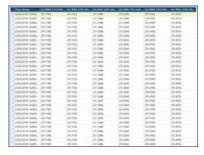

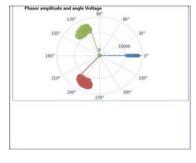

chart: View selected parameters for a selected time range. It allows to review scattered dots of a specific parameter in relation to another parameter.

 Summary chart: View parameters for a selected time range. This chart displays the minimum, maximum and average value of each parameter.

 Grid chart: View selected parameters for selected time range in a table.

 Phasor chart: View the phasor's amplitude and angle for a selected time range.

View overlaid voltage waveform cycles for a selected time range. It is made possible thanks to the unique continuous recording mechanism of PQE Power Logger analyzers. The histogram shows the deviation from the expected ideal waveform by overlaying the waveforms.

## Flexible Architecture

The system architecture of the Power Logger G5DFR enables the concentration and the monitoring of a large array of analog and binary channels as well as controlled and processed signals. The G5 DFR is a ½ 19" rack mount device that include 1 CPU module, 1 PSU module and 1 data acquisition unit. The data acquisition unit is assembled out of 5 data acquisition cards performing the following functions:

- Connection to the input/output signals Filtering and isolation
- Analog/digital conversion
- Synchronized sampling for all channels

The Data acquisition cards are divided into two main groups:

- Analog cards each device can be mounted with up to 2 analog cards. The analog card meaures fast analog channels (voltage and currents) at various ranges and sampling rate. Based on the waveform raw data capture by those cards, the CPU calculates displays and stores 10,000 different power parameters. Each analog card can hold up to 8 analog channels
- Auxiliary cards the auxiliary cards extend the G5DFR capabilities by adding various I/O signals such as digital I/O, process signals I/O 4-20mA and relays output. The auxiliary cards are continuously sampled and stored at 128 samples/cycle.

# Ordering Options

#### 1. Software Features

- Modbus interface
- IEC 61850 MMS, GOOSE, Sample Values
- Phasor Measurement Unit (PMU)

### 2. Front Panel communication ports:

- 2xUSB
- 1xSerial
- 1xLAN

### 3. Analog Cards: up to 2 cards per unit

#### 3.1. Analog Cards: 4V/4I (50A)

Voltage full range scale	500V/1,500V/8000V		
Voltage accuracy	0.1% from Nominal		
Current sensor type	CT/ Hall Effect		
Capacity	50A (for 5sec)		
Thermal withstand	10A continuous		
Current accuracy	0.1% from Nominal		
Current full scale	5A		

#### 3.2. Analog Cards: 4V/4I (100A)

Voltage full range scale	500V/1,500V/8000V		
Voltage accuracy	0.1% from Nominal		
Current sensor type	CT/ Hall Effect/Shunt		
Capacity	100A (for 5sec)		
Thermal withstand	10A continuous		
Current accuracy	0.1% from Nominal		
Current full scale	5A		

#### 3.3. Analog Cards: 8I (50A)

Current sensor type	CT/Hall Effect
Capacity (for 5 sec.)	50A
Thermal withstand	10A continuous
Current accuracy	0.1% from Nominal
Current full scale	5A

#### 3.4. Analog Cards: 8I (100A)

Current sensor type	Hall Effect
Capacity (for 5 sec.)	100A
Thermal withstand	10A continuous
Current accuracy	0.1% from Nominal
Current full scale	5A

#### 3.5. Analog Cards: 8V

Voltage full range scale	500V/1,500V/8000V
Current accuracy	0.1% from Nominal

#### 3.6. Analog Cards: 4LV 4V

Number of high voltage channels	4	
Voltage range full scale (V)	500V/1,500V/8000V	
Current accuracy	0.1% from Nominal	
Number of low voltage channels	4	
Voltage range full scale (LV)	+/- 10V	
Accuracy	0.1% from Nominal	

## 4. Auxiliary Cards: Up to 5 cards per unit

### 4.1. Digital Input

Number of channels	32		
Range	48 VDC (±20%)	115 VDC (±20%)	230 VDC (±20%)
Activation treshold	24 VDC	92 VDC	176 VDC
Undefined range	5-24 VDC	5-92 VDC	5-176 VDC

#### 4.2 Digital Output

Number of channels	16
Range	115 VDC (±20%)
Activation treshold	92 VDC
Undefined range	5-92 VDC

#### 4.3 Relay Output

Number of contacts	8
Contact arrangement	1 form C (CO)
Rated voltage	250VAC
Max. switching voltage	400VAC
Rated current	16A
Limiting continuous current	16A
Max. 4sec, duty factor 10%	30A
Breaking capacity max	4,000VA
Operate/release time max., DC coil	8/6ms

## Worldwide Innovator in Power Quality

Since 1990 PQE has developed marketed proven power quality solutions far exceeding our clients' needs and expectations. Our innovations not only simplify the understanding of the quality of power itself, but are also highly compatible, making it suitable for any business and/or application. PQE team of professionals with extensive experience in electrical engineering, are ready to provide a tailor-made strategy that will enable a sustainable and efficient use of your electrical energy.
