

# AdvanceGuard

SPAN 400 ADVANCE GUARDRAIL SYSTEM

# INSTANT

QUALITY & STRENGTH YOU CAN TRUST

## Key Features

### 1. Integral AdvantGuard System

Instant AdvantGuard is an integral part of the structure of the tower – and as such it is not possible to build the tower without them (due to the way of advance installation of the guardrails). Overcoming a major challenge when previously operators had to install the safety rails on towers.

### 2. One Versatile Unit – light and easy to handle

Fixed positions collect the protection and improve tower operators overall safety when working at height. **WEB FEED COMPONENT** – depending on diameter of tower 1.8-3.0m, four parts are used per tower. For the operator this means less handling and increased speed of assembly.

### 3. Realize Possessable Illness

The AdvantGuard is designed in such a way that it cannot physically be removed by the operator while standing on the working platform.

### 4. Rib-Grp cold formed joints

The cold formed Rib-Grp joining process is a key feature of the Instant tower system and provides three times the strength and durability of traditional welded joints. **NO Welding** – no checking for cracks, 10 year no operator wear and tear!

The Instant AdvantGuard is an advance guardrail system that provides total fall prevention for the operator throughout assembly and dismantling of all towers.

In one versatile unit the lightweight AdvantGuard provides premium collective protection and improves operator safety when working at height. From the ground level up, the operator using AdvantGuard is assured a safe and secure environment to carry out their work at height.

Suitable for all Instant Span 400 Towers with lengths of 2m, 3.0m and 4m.

Instant Span Towers feature the unique high strength Rib-Grp joining system, guaranteed for 10 years.

All standard components have an extended 10 year warranty – on all EU manufactured parts only.

Instant Towers are compliant with EN1204 and Work at Height Directives, Load Class 2.
