

This remodeled **Tulsa, Oklahoma** Arby's is scale-free.

Arby's

Several **Arby's Roast Beef** restaurants in Oklahoma (USA) are enjoying the benefits of **ScaleBlaster** on their buildings. The world's most famous roast beef sandwich maker has over 3,000 locations worldwide. In a hard water area like Oklahoma, scale problems are a common occurrence.

Because of **ScaleBlaster**, all the pipes are free of limescale build-up, corrosion on the pipe seams is gone, the soda machines flow better, and the fin taps on the freezer pipes are totally cleaned. The newly remodeled Arby's (pictured to the left) has been scale and water trouble-free since **June of 2002**. Without **ScaleBlaster**, management was looking at a *costly investment* of replacing the freezers and other items. Other benefits include reduced maintenance calls and the water filters lasting much longer.

When remodeling one of their main stores in Tulsa, OK management decided to install a **ScaleBlaster** along with the new plumbing system from the start. To this date, there have been no water problems of any kind. They feel this was a good investment and have added units in other stores.

This **Norman, Oklahoma** store was the first Arby's in the state to get a **ScaleBlaster** installed (**model # SB-200**).

A custom-made installation!

This new **Arby's** store had **ScaleBlaster's** installation pre-planned and was mounted in the ceiling and hidden by a dropped ceiling pad.

Dear Ron:

Just a word to let you know results of using your ScaleBlaster SB200, on three of our stores. A little over a year ago, we were experiencing severe scaling problems in two of our satellite stores in Norman and Edmond, OK stores.

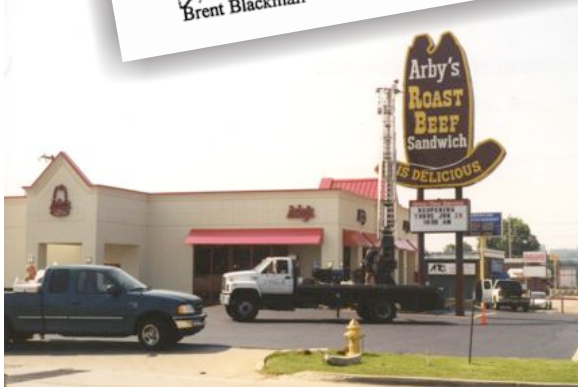

After our maintenance supervisor installed the first unit in Norman, he reported a marked improvement occurred in several areas of the store. Because of this, we also installed your unit in our Edmond store which was having severe problems, with good results as well.

When remodeling one of our main stores in Tulsa, we decided to install a ScaleBlaster since we had a complete new plumbing system and thought using a unit from the start would be good insurance. One year has now passed, and our new store has had no water problems of any kind.

We feel this was a good investment and look forward to using your units in future store installations.

Sincerely,

Brent Blackman

As maintenance supervisor for our Western Oklahoma Arby's Restaurants, we had a number of stores that required repeated service calls because of clogged up ice machines and other water scaling problems.

Of course, water characteristics change from city to city which sometimes is a factor, but since installing your Clearwater ScaleBlasters, in our Norman and Edmond stores, both have reported distinct improvements with their ice makers and liquid dispensing equipment.

We are preparing to service additional area stores with more of your units in the near future.
