INDUSTRIES SERVED

Dry-ice blasting is a process that uses pressurized air and dry ice to clean surfaces. It is often used as an alternative to sandblasting as it does not require any water or chemicals. The process starts by freezing dry ice into a solid block. The surface of the material to be cleaned is then sprayed with pressurized air and the dry ice is blasted onto the surface. The pressure from the air causes the dry ice particles to break apart and stick to the surface, removing dirt and grime with it.

Hospitals and laboratories use dry ice when transferring sensitive samples, organs, blood, and other materials that need a cold environment to survive the journey.

Events Industry dry ice is most commonly used in fog machines to provide a dense layer of fog on a stage or floor. Pouring hot water over dry ice in a bowl or bucket is the simplest way to make fog.

Logistics dry ice shipping is the process of shipping temperature-sensitive items like medicine, vaccines, frozen foods, and more. Since dry ice does not convert to liquid and evaporates directly as a gas from its solid state, it's the best material for insulating and protecting temperature-sensitive products in logistics.

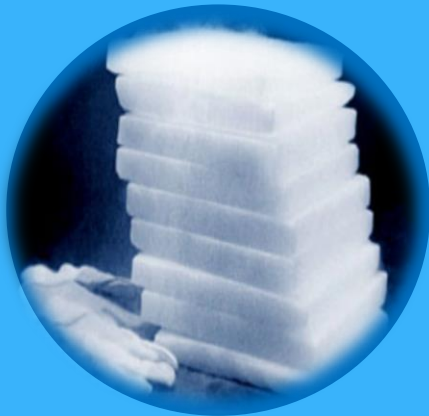

PRODUCTS

2.5kg Dry Ice Block As the most frequently used size of dry ice slices, our 2.5kg slab are ideal for many applications. Due to their durability and convenience, 2.5kg block are used in a variety of applications such as:

- Medical Industries
- Inflight Catering
- Special Effects
- Temperature controlled Logistic & storage
- Freeze Drying
- Freeze Branding

1kg Dry Ice Slab As the most frequently used size of dry ice slices, our 1kg slab are ideal for many applications. Due to their durability and convenience, 1kg slab are used in a variety of applications such as:

- Inflight Catering
- Special Effects
- Temperature controlled Logistic & storage
- Freeze Drying
- Freeze Branding

12mm Diameter Dry Ice Pellets, appear in bigger size as pellet form. This product is predominantly used for transportation, served during restaurant for decoration purpose. However, its characteristics mean it is also ideal for Event and in-process Cooling for the Chemical & Food Industry

3mm Diameter Dry Ice Pellets Our smallest form of dry ice. The length of the pellets varies from 1cm to about 8cm long. This product is predominantly used for Dry Ice Blast Cleaning; however its characteristics mean it is also ideal for:

- Cold Grinding
- Dry Ice Blast Cleaning
- Freeze Drying
- In-process Cooling for the Chemical & Food Industry
- Shrink Fitting
- Industrial Cleaning i.e. blasting in industrial oven to remove carbon

ABOUT US

Organization Chart

COLDBOX SOLUTION

is a professional and experienced dry Ice solution provider. Our headquarters is situated in Shah Alam, Selangor, Malaysia.

In COLDBOX SOLUTION, we specialized in providing a wide variety of dry ice product such as Dry Ice Block, Pallet Dry Ice, Dry Ice Slap, Dry Ice Blasting and etc. It has always been our main mission to provide high quality products along with competitive price. With a group of professional and experienced staff, we are able to fully understand our customers' requirements and provide them with their ideal products. We differentiate ourselves by continually expanding our product variety to match the growing market demand.

If you are interested in any of our products, please feel to contact us for more details. We will be delighted to hear from you.

45, Jalan Utarid U5/22, Bandar Pinggiran Subang, Mah Sing Industrial Park, 40150 Shah Alam, Selangor, Malaysia.
