

## ASPHALT PERMEAMETER APPARATUS

Standard: MPW Belgium Highway Model

### Permeability

Mainly used in situ to perform and to check the permeability and drainage on road carpets, concrete pavements, tamped earth & etc. The test consists in filling the cylinder with water, ermetically positioning it on the carpet under test and then incalculating the time needed by a certain quantity of water to be absorbed by the same. The instrument is composed of a bottomless plexiglass cylinder 140 mm inside diameter, fitted on a base. The cylinder has two black calibration lines: one at zero point and one at 250 mm.

### Technical Specifications :

<b>Model Number</b>	<b>NL 2029 X / 001</b>
Dimension (mm)	260 (L) x 260 (W) x 415 (H)
Approx. Weight	8 kg

### Unit Consist Of:

Model Number	Parts Description	Qty
NL 2029 X / 001 – P 001	Arcylic Cell	1no.
NL 2029 X / 001 – P 002	5 kg Counter Weight	1no.
